Not unless one more or less fell out of the sky and landed at their feet like a wounded duck. But legal process is one of those mills that grinds slowly but exceedingly fine. Modified today, it was once necessary to notify a crowd of people that their assembly was illegal before wading in and busting heads, the familiar reading of the Riot Act. This sounds like one of those ritualistic readings. It is the nice thing to do, it is the politically correct thing to do, and it tends to prove to Federal judges and DA's that those that will be busted are not mildly stupid average citizens led into sin by the availability of unrighteous hardware. A record is being built; let those with ears hear.

The cleaning of the ham bands of known pains in the butt, the clearing of commercial interests out of the ham bands, continue apace and will counter

any charge of selective enforcement. Big or small, we bash them all.

At some point, equipment manufacturers are going to get stepped on like the Big Foot in a Monty Python sketch -- or perhaps like drunken Uncle Ole on Christmas morning staggering a bit close to your brand new electric train. There are probably enough retired FCC lawyers in existence to do the paperwork on a volunteer basis. Some companies are going to have more charges and RICO (racketeer influenced criminal organization) complaints than John Gotti. Anyone expecting this 'export' charade to hold up is expecting the greatest miracle since Lazarus.

But truckers have to stop at weigh stations and assorted border points of entry; they are not all that immune. Again, Reilly could round up enough volunteers to simply check radio gear on all the trucks getting safety inspections for an hour or so (much more would be stupid -- a small little one-man raid on I-95 would be on Channel 19 in one variation or another and would be known from Key West to Portland ME in no time). Better yet, park a van on I-95 a mile or two from the weigh station on 28.085 and flag the yo-yos for a bust at the weigh station. Might not be too surprising if some of the trucking companies were inconvenienced enough to come down on their own drivers.

It would not surprise me if enough FCC personnel are pissed enough to do the work on their own time. They have had their noses rubbed in it for far too long. If there are indeed international complaints (possibly encouraged by some back-route communication from the FCC itself) it will be very hard to deny them the funding to come down like a ton of hot skunk shit.

As I have noted before, undermanned enforcers like to do crucifixions: brutality is sort of frowned upon but it is damned effective. It worked for the Romans, it worked for the LAPD, it worked for the US Marines, it has been done by the IRS. The question is how long people will insist on carrying nails and 2x4's around with them. The 28 MHz line will be defended; depend on it.

The FCC CAN and HAS nailed mobile Ham QRM'rs before (last one I remember was a constant QRM'r on 40m).... What makes YOU so sure they won't? In fact, truckers would probably be the EASIEST of mobiles to nail... many run the same route each day....

But they'll never get meeeeeeeee!!!... I take a different route every day. you never know when some G-Man is following you! (hee hee..)

Dave
jamesrhampton@my-deja.com wrote in message <8undl1ngb1@nnrp1.deja.com>...
Just a thought - it likely is radiated emissions from the CD or
stereo. All electronic devices use energy. Some of this is radiated
in various places over the electromagnetic spectrum. CDs and stereos
these days use microprocessors and can generate considerable noise.
Although the FCC regulates the manufacture of any devices using any
alternating currents above 10 KHz, this alone does not guarantee
interference free operation of the devices. My old computer generated
a lot of hash on my 440 MHz FM HT. All you need is rf being generated
that can get into your IF via mixing anywhere in your CB set and you've
got noise. Try moving things around (like the CB into another room if
in the house) or reorient antennas. This should help (unless, of
course, the CD player, stereo, and CB are in a vehicle - then you gots
problems!)

Best of luck with that
Jim

Like many others have stated it really depends on what you want you system to do, are you just wanting to tak to locals and minor DX in a mobile setup or do you want a base seup to talk to locals and lots of DX. You can spend anywhere for as little as $100 (crap in my book) to $300 for a respectable setup (like the one I have) to as much as FDIC will insure at your local bank. A good mobile setup like I have (and I get complements on) A Uniden Grant XL (best domestic radio there is for the price in my book, super clean, modifiable, tough radio) a Wilson 5000 mag mount antenna and a Cobra CA-80 power echo mic. (there are better mics though go with a noise canceling but if you want echo get it in the mic not a radio board) The Grant I have had peaked to put out 10W AM and 25 SSB, so I can hook up an amp if I want it (want it just can't afford it right now) with this setup you will be happy. If you want a base setup go with an export 2950 or similar (I am still comparing radios) and as for antennas it seams like for local comms an Antron99 is ONE of the best and most popular as for DX I am not too sure but Most 4 - 6 element beam antennas seam like the popular choice.

Wah wah ... sounds like more corporate welfare to me. Can't spend enough government buck$ to big business. Build some more stadiums. Sure, we'll auction off some frequencies. No welfare here. Hmmmm ... how's your health insurance cost? I hope you don't really need your health insurance, since they will likely deny you for one reason or another. Compare our health care costs with the rest of the industrialized nations. Now compare our 'benefits' (if there are any). How well do you think they will use these new frequencies? Think you'll save money? Say, didja buy your lottery ticket? Those are legal and they pay darn near 50 cents on the dollar. You better not see your bookie, since that is illegal (and pays 80 to 90 % on the dollar!). Just follow the buck$ and you will eventually see what is happening.

yeh poor al, he had such a terrible childhood in tennessee. but wait
didn't he grow up in washington dc. yes and he used pot and unlike his
fellow commie dem , he smoked it and inhaled too. if you have read any
of his one book he has had published, you would think he smoked a
little too much of that wacky tobacky. of course old al is a terrible
landlord, he will not fix anything at the one house they rent in good
old tennessee. of course he wanted those people to move anyway. he
planned on letting the secret service use it,....cd is out........

<<
Subject: Pepsi Plane Crash

An airplane full of a shipment of Pepsi flying over Africa had a
malfunction, and went down. A few weeks later, the Pepsi Company sent a
rescue plane. They searched the area and found a tribe of cannibals.
They
walked up to the Chief of the tribe and asked him if he knew anything
about
the crash. The Chief said, "You betcha!" When asked where the crew was,
the
Chief replied, "We ate the crew, and we drank the Pepsi." The Rescue
crew
were shocked. One man asked, "Did you eat their legs?" The chief
replied, "We
ate their legs,
and we drank the Pepsi." Another rescuer asked, "Did you eat their
arms?"
The Chief replied, "We ate their arms, and we drank the Pepsi." After
looking
totally perplexed for a minute, a third asked, "Did you...you
know...eat,
their...'things'?" The chief says, "No." "No?" asked the rescuer. "No,"
replied the Chief,
"THINGS go better with Coke."

>that America's Web surfers have a "need for speed," and are willing to pay
>

but the surfers are already paying taxes and other bills to get on
that service,why does the Gov need to be so greedy to not tax when
something is small,but when they see something big,they go after
it.Seems everything that people get going after they pay income taxes
and sales taxes,gets taxed also.If you don't spend your money on
anything and bank it,you're even taxed there,geeeeee No wonder people
hack away at DTV DSS and all of that.Please do everything you can
under the table,keep the Gov out of your pocket book.They get enough
even before you get your pay ok...73

Mr Gore took advantage of Bush sayin he didn't want to make things bad
and ask for recounts by hand in his counties,this caught Bush in a
catch 22 spot,so Gore took it upon himself to get the handcounts in
his counties knowing Bush would make himself look bad if he asked for
it too.Plus he knew Bush might run out of time being caught in a catch
22.How can manually counting 4000 ballots determine the % over 400,000
this is stupid..the result would not PROOVE a % ..all the ballots
would have to be manually counted.

Now that you remind me of the DNA stuff, I will partially concede your point
(I'm flexible, I can be persuaded), since this technology was not available
in the past.
But the technology is available now. So for the murderers of the future,
try them and fry them (after their 10 years of appeals of course).

CD.... I doubt you'll see much enforcement change on 11 anytime soon..
they'll continue with the 'easy' busts there, but I think they're handin'
out 'fair warning' on 10m interlopers.

Jerry...
The message was essentially a warning, broadcast on 10m in AM mode, for the benefit of unlicensed stations.The 10m AM broadcast by the FCC (30 over 9 at my location) was Riley Hollingsworth's voice in a beacon-style, repeated, message along the lines of..."This is an FCC monitoring station. Unlicensed operation on this band is punishable by fines, etc and causes interference to licensed users. Citizen Band type operation is only legal between XX & XXMhz (insert CB band edges). Unlicensed operation in this band must cease immediately"

These are not the 'exact' words, but close enough.... I'd call it the 'shot across the bow'.

Message-ID: <d9hv0tsdo2unqu3luj5kqnl538agra4kt7@4ax.com>
Source record: 59114

Greetings!

A CD player? Well, they demodulate the tracks using FM.

I would suspect the CD player is causing the interference. But, the amp used for the stereo would give off a whine or pulsate with the beat of the music.

Try this with the amp off - does music play over the radio? If so, the CD player is the culprit. You might have to replace it, or at least investigate the connections going to it.

If it goes away, suspect the amp - a simple power filter might help. More serious work will have to be done to shield the amp if it doesn't.

If you're sharing the same power supply feed, take the CB off of it and use another connection point. A separate filter for the CB might also be in order.

You may have to relocate the CB elsewhwere in the mobile to get the stereo's noise out of it.

On Sun, 12 Nov 2000 18:02:26 -0500, while the modem was pondering it's navel, "Dave or Debby" <truth@planetc.com> dissertated the following:

:+> You Super Techs out there--I have a hard one for you. Last PM I saw noise
:+> come over a CB when the stereo or CD was on, like little sparks of audio
:+> comming over the CB. CB antenna was grounded & matched good and the AM/FM
:+> antenna was mounted on fiberglass and not grounded. We tried another CB &
:+> same problem. It had an external amp for the stereo, which was grounded.
:+> Have you seen this & what will fix it? E mail me with answer or post.

Source record: 59119

I have a Cobra 148 GTL-DX that I am using a 6 digit freq counter on that only reads when I tx. I was wondering if anyone ever wired one of the Ranger FC-390 freq counters to the PLL in a 148. I know they come with the extra wiring harness but does anyone know if it will work with this PLL?

Thanks

Joker535

he'll be doing the south americans a favor. move all the US truckers out of the way so they can go back to pirating the cw band like they used to. guess the latin american guys can come up off of 12 meters and pirate on 10. if riley gets the truckers off it will be dead band again since there the only ones using it on a steady basis

>

You can do it a whole lot easier on "HIGH POWER".

Come back when you've done all 50 mobile to mobile:))

I cheated by living here in England but it was a kick hearing the
various responses from US mobiles out in some of the western states when
called by this weak and under-modulated mobile in the centre of London's
traffic - especially Cisco in Hawaii.

Phil 148 / UK

I think I'd die trying all that again on AM.

Don't know. 8-)) The tag line is a tongue-in-cheek slam at those in Ham radio who think CW is the be-all and end-all of Ham radio, IMHO it's not. There is a very good chance at the WARC, World Administrative Radio Conference, in 2003 that the S25 requirement, for CW proficiency to use the bands below 30MHz, may get dumped. Some of the people pushing for elimination of CW are from groups like RSGB, Radio Society of Great Britain, among others.

It seems to cut the audio down as the power goes up - I have the radio turned way down thinking that would compensate but it doesn't. Also did your swr potentiometer need to be replaced because mine is 5K and not a 10K as the mod suggests. also all the way to the right is low and to the left is high on mine. Did you get the same results?

Thanks,

5229. Re: Northstar 9500--Galaxy 2517

Newsgroup: rec.radio.cb
Date: 2000-11-13 00:00:00 UTC
From: Bill Nadzam <nadzam@bills2way.com>
Message-ID: <3A101F9B.B7B27700@bills2way.com>
Source record: 59138

The NorthStar 9500 is not even close to the DX-2517....

The NS-9500 is based on the EPT-360014B board with an Odd Channel Selector switch. This is the same board used in the Galaxy Saturn Base, The RCI-2980 Base, and all of the DX-xx Galaxy Mobiles.
Also the NS-9500 has an interesting power supply. It uses an off the shelf PC power supply. This sounds dumb, but is nice. It has a built in Fan to cool the radio. Also; it allows for external 12Volt DC power. The Radio itself is in a second Case. Inside the Main case. Very nice for keeping the unit clean, and shielded.

The DX-2517 is based on the newest RCI Main board, the EPT-690010Z board. This is the board used in radios like the Connex 4800DLX, 4400, the Cobra 148F-GTL DX, RCI-6900FTB(HP), RCI-6300FTB(HP), TR-6900 Jumbo, General Grant and the list goes on.

A variant of this is used in the Galaxy DX-949, 959 CB mobiles. Also in the Texas Ranger
696, 396 series radios.

It sounds like you have the pot wired backwards to me.
I don't know what the value of the swr pot is on mine,
I just hooked it up the way the instructions said to.
Mine has full power at full clockwise. I did notice
a significant differnce between my HR2510 and my
HR2600 when I performed this mod on them. The mod would
turn the SSB down to zero on my 2510, but on the 2600
it would only vary the SSB output about 10 watts. At
full clockwise it will put out about 30 watts and at
full counter-clockwise it would do about 20 watts.
The AM will turn down to 0 watts on both radios. There
may be a difference in the value of the two pots.
The radio will lose modulation percentage as the AM
power is increased. I have mine set to around 6 watts
AM at full clockwise. This gives very good modulation
and forward swing.
Larry

Just an idea,
BUY a ballbearing , drill a hole in it big enough to go on the arial,
then drill another hole in it ,tap it ,then put a screw into it.

I just traded for (about 10 minutes ago) a CPI-2000 radio and the
matching BC-2000 console and the CPI mic all near mint
condition.... this is the first one of these I've seen but I've
heard of them... suposed to be a very good rig..... and this one
seems to work purfect.....
anybody know anything about these? freq conversion? mods? and
what is the value of this thing.....

here's a pic of it

: Hi,
: I've got a Swan 350 & 500 sitting around. Anybody have mods for these
: to run 11 meters?

Hi there,

Both the 350 and 500 operate on the standard ham bands as received from the factory. They are really set up to operate SSB or CW Modes only, but they will operate AM if modified. Power input/output has to be done at much reduced ratings.

Moving the 10 meter band down to 11 can be done, but you'd be shooting your self in the foot about it. I've met very few people who could pull it off without hosing up the VFO circuit. It involves properly "ranging" the VFO LC circuit, else you lose the proper bandspread of the factory VFO.

Then you would have to properly modify each Transmit and Receive tuned circuit to the center of the new band, then realign it. Probably not worth the effort when you get done with it.

Good radios, just not practical to move so far when other options are handy. I don't have much on Swan there, but I do have a small Swan Siltronix web page for your enjoyment. http://sonic.ucdavis.edu in the amateur radio section.

One last thing... some or most of the early swan 350 rigs didn't have the op sideband as received from the factory. Adding the op sideband now would be a real pain in the pazzoo...

cheers
skipp@pilot.ucdavis.edu

joker,

I have made tip balls out of small fishing weights. Sometimes these
make pretty fair static balls (at least temporily until you can find
a real one). Lots of times you can just jam or screw the whip into the
center hole, or put a little glue in the hole.

Hope this helps if you can't find "real" antenna balls or a ball bearing

Wouldn't solve the problem. You need a circuit that will mix the PLL output,
and all oscillator frequencies as well.

>

A fair question for sure. And you may well have answered it with the
observation about being busted and not taking the hint.

Two big rules of shit-disturbance are these:
1) Never cornerplay superior power. Leave your opponent an exit or at the
very least a fig leaf.

2) Don't go to the same well too often.

The export thing was a fig leaf. Simply notified Charlie that a legal
defense would ensue however ludicrous and come back when you have the time
and money for a real fight. Charlie had neither and everyone knew it. It
probably still doesn't. But it seems that Riley is getting them; six months
ago he seemed to be running a program consisting of himself and the steno
pool. We now find that he has access to Technical people to hassle E-Bay,
and a fairly hi-powered Ancient Mary transmitter which when you think about
it has to be a bit rare anywhere these days outside of the Voice of America
and I doubt these were made for 28.085. Wonder what closet that came out
of. Knowing its origin might be interesting.

Crossing the 28.0 line brought in the possibility of foreign complaint under
the Geneva Treaty as we are now in frequencies designated in the treaty
specifically rather than the vague Land Mobile designation which essentially
leaves regulation to the Regions or to countries. When the State Department
gets people bitching at it, things tend to move; one does not propose to
lose the invitation to a French wine-and-cheese gala or the Stilton down at
the Brit's place, now does one?

A kind of side issue here, do you remember the scene in Exodus (Leon Uris,
not the Bible) where the Israelis had stolen a lot of British hardware,
trucks etc, and marked them all with numbers beginning HMJFC which turned

out to mean His Majesty's Jewish Forces on Cyprus. It seems that they used the Cypress amateur prefix (ZD6 I believe at the time) for their military and operated in amateur frequencies. The upshot is that the hobby is feared and loathed thruout the Middle East to this day. For all I know, the griping may be coming from some thatched hut country. Makes no diff.

But 28.0 is also something of a regulatory Rubicon; if you can't defend it, what the hell can you defend? The long and short is that crossing 28 is cornerplaying superior power. D-U-M-B.

The export thing goes back more than 30 years and at one time was actually almost true. We went thru the Yayhoo FT100 era and the infamous brown wire and fairly easy coverage of the world's CB freqs. But some idiot went to the well once too often. When the CB mags advocated joining the hams on 10 meters, that was sure as hell a bridge too far. Slopping into 10 was one thing but 28.755???

I don't know any more than you do but every bit of history and bureaucratic lore my 57 years has learned just causes the gut to expect some major and minor crucifixions to occur in mid-01.

Dick

Limit modulation to 85-90% and then leave it alone. Any
more than that and you are only causing distortion, which
contributes nothing to signal strength or intelligability.

I have made several form bras knobs for cupboards. You can get them at the hardware store for about $5 or less. I then Mill them down with a hand drill. Brass is soft so it only takes 10 minutes or so.. The end result is a nice round brass ball. one side is already drilled and threaded.

Take it ALL the way apart, do your thing then put it ALL the way back
together and test it. And the hope like hell you did not plug one of the 15
or so plugs in wrong. They are a nightmare to work on.

from what i understand about coaxial cable is that it doesnt alter
transmission, only makes your swr look better. so in theory you could use
any length of cable, just have phUn tunning.

>>>I find it ironic that only the one's that can't talk on the bowl cry the loudest..wait, no I don't..and on the comment of anatomy vs. radio..I feel you are projecting.<<<

i don't go on the super bowl . plain and simple . i could give two shits if they could hear me . i go for quality not quanity . i don't wanna big radio , i don't wanna sound that crappy .

i also have respect for other stations , i don't want a radio that splatters over all 40 channels from 25 miles away , or one that is so over driven and over modulated its nearly impossible to understand .

i will stick to my 2 pill , and keep my modulation at 100% .

and as for being heard over some one , if someone is on the channel i am on , i don't turn the modulation up and talk over them , i change channels . IMAGINE THAT , yes there are other channels than 6 &11 .

Just a thought - it likely is radiated emissions from the CD or stereo. All electronic devices use energy. Some of this is radiated in various places over the electromagnetic spectrum. CDs and stereos these days use microprocessors and can generate considerable noise. Although the FCC regulates the manufacture of any devices using any alternating currents above 10 KHz, this alone does not guarantee interference free operation of the devices. My old computer generated a lot of hash on my 440 MHz FM HT. All you need is rf being generated that can get into your IF via mixing anywhere in your CB set and you've got noise. Try moving things around (like the CB into another room if in the house) or reorient antennas. This should help (unless, of course, the CD player, stereo, and CB are in a vehicle - then you gots problems!)

Best of luck with that
Jim

Most modern car stereo amps and some older ones have switching type power supplies in them,to generate 40volts or even higher to run the output stages.This supply willl shift in frequency depending on current draw from the output stages.In the process it can create many harmonics that can either radiate or broadcast or possibly even ride on the power leads and get into the cb.Poor filtering and or poor shielding or even a problem developing in the amp can contribute to the problem .I have an old kenwood amp wich had to have electrolytic capacitors replaced in it to solve the problem.

Radio is comparable to a Tomahawk base. Looks identacle, but internally is a true ham rig, not a pumped-up cb. Features should be the same. Frequency readout, memory buttons, scan, nice dual meters, whole 9 yards.

-CharredPC

<twistedhed@webtv.net> wrote in message news:18386-3A0F211B-85@storefull-122.iap.bryant.webtv.net...
Don't know what the radio is worth, as I am not familiar with it. Maybe someone here can give you a ballpark appraisal. If the mic is indeed a "special edition" and is in excelent or near-mint condition, I'd sell the mic separately and start the bidding at 50 or 60 bucks. Don't worry, it will go up. My ?? and that's about it!

Source record: 59101

sideband <sideband@cac.net> wrote:

: I think we're saying the same thing, here, only we're thinking about
: it differently.... I only take umberage with the varience of the
: frequency of the sidebands....

Not quite.

: Being there is no carrier to reference on LSB and USB, how would the
: receiver be able to clarify an LSB or USB signal... WIth the
: clarifier? No.. the clarifier sets the frequency the radio is tuned
: to. So if the frequency of the transmitted signal changes with the
: modulation, the receiver wouldn't know how to decypher it into
: intelligable audio.

True, the clarifier changes the center frequency. So what? On SSB,
the radio injects a "carrier", to allow the recovery of the sideband
signal.

The frequency of the carrier does not change with modulation, but the
sidebands vary quite a bit - both in the frequencies they contain and
the amplitudes of the various frequencies.

: It's the power that varies with modulation on AM, LSB, and USB, not
: the frequency..

Correct - the power in the sidebands, not the power in the carrier.
This assumes a normal signal, and not one that is modified to provide
a lot of "swing", or one that is overmodulated with an inadequate
power supply.

: In the Sams Photofacts for the 148, in the alignment procedures, VR4
: is the Carrier Balance for SSB. L 59 and L 22 are the carrier point
: adjustments for upper and lower sideband, respectively, and guess
: what? They're 1.5Khz above and below the adjustment for the carrier
: point on AM (l 23) respectively....

: Now tell me I'm smokin crack.

Why? Is there a problem with this?

i agree. hillbilly has the best online catalog. the only problem is
that you have to clean the equipment. it usually had pepsi syrup on
it,....cd is out.........

>same problem. It had an external amp for the stereo, which was grounded.
>Have you seen this & what will fix it? E mail me with answer or post.
>Thanks!
>Dave

I didn't realize this was in a car at first, but the guy who posted
the info about the switching power supply in the amp is right on. I
had a similar problem with several amps. You can prove it to
yourself by tuning the AM radio around the dial to blank
frequencies, where you'll probably hear the same chirping noises
that vary with the volume. I actually wound up mounting the stereo
amp under the hood (away from the antenna) with a big toroid coil
on the DC power lead right at the amp. I also put two 10,000 MFD
capacitors on either side of the input lead. You might also need to
filter the little lead that runs to the radio to turn the amp on &
off. It's most important that you ground the shit out of the amp
chassis and the negative input lead & output leads. Use multiple
wires & keep them as short as possible.

You might not have to do as much as I did. I was filtering not only
for a CB (which has a lot of inherent noise on the band) but also
for some HF ham radio gear, where signals are much weaker.

Good luck!!

Dave B.

Big FATTT carrier and properly adjusted mic gain works well, especially when it's noisy. Crystal clear audio.

As you to I think are only going to believe what you care to Doc, but as it is written in the Nov issue of QST, The petition sought to amend 95.413 of the rules that prohibits communications or attempts to communicate with CB stations more than 250km away and to contact stations in other countries. The petition being filed by Alan Dixon. The FCC said CB operators generally supported the proposal, asserting that the present rule was unenforceable. The ARRL commented in opposition to the petition.
"The Amateur Radio Service is the proper forum for the desired long-distance communications sought by the Dixon petition."
The FCC agreed with the ARRL and said it did not intend to create a service paralleling the Amateur Service when it authorezed the Citizens Radio Service. The ational Association of Broadcasters also opposed Dixon's petition. The NAB said consumers must be protected from illegal CB transmissions that interfere with radio, TV and other consumer electronics.
The above info came right from the Nov issue of QST magazine.

Well you never hear about all the interferance that the hams cause, its always the CB'er.

Everyone also points out about the power output from other countries, well what about the mega watt stations coming from Mexico from 28.200 MHZ down to 27.405 MHZ.......LIke Doc sez these are my opinions and I chose to voice them as he has many times in this forum.

Well the ARRL did it again, they strongly opposed the lifting of the 155 mile rule on CB's. So what that means is every time yo shoot skip and talk to someone more 155 miles away, your breaking the law.
You know i wished ARRL would keep their noses out of other peoples business, no wonder people don't want to become ham radio operators, hell I am and I am thinking about turning my license back in to the FCC. The reason's, well lets see one of the reason's was, they don't want CB to be competative against amateur radio, hello it already is and there's nothing they can do to change that. The way ham's look down their noses at CB'ers its no wonder.
Another reason, it would promote the use of illegal linears, come on there are already enough linears out there. My attltude towards linears and big ham operators, the less power I use to make a contact the better I feel.
Come on guys can't we all get along, we are all out there for the same reason, to make contacts and help out others during times of emergencies. But because the hams have that license and can run 1500 watts.....well its all a status symbol, something i don't want or need. Not that they would admitt it, but the hams are still bitter over losing the 11 meter band and will always look for ways to contane 11 meters. Yes I will admitt the 11 meter band has its problems but then take a listen to 75 meters or 20 meters during a contest, there's lots of rude people on the ham bands too.
To bad all the folks on the 11 meter band could not get together and go toe to toe with the FCC and ARRL.
Afterall the airways belong to everyone.

Hi,
I have had a 2950DX2 for about 2mo now, The only thing i have to do
different from my old 2950 is use the RF gain control more often because the
radio has so much gain, but thats why they call it a DX model. The radio
comes tuned up so you just install and use the radio and you will get good
results. 73s OLDTIMER

I think it's a good follow on to the old model. Totally new design. Surface mount board. 2 Year Warranty. Looks like the RCI people have got a good model here. I like the green LCD Screen as well. Looks nice.
Now with 10 ~ 12 meter coverage and a very fine receiver this radio will be a favorite again. One thing that was a problem for the older model , "factory soldering". They had a real problem with their soldering machines. Not sure what they did on these units, but very clean. Maybe they have them done outside, these are way beyond what we saw from RCI on the older units.

I have for sale two RMS, made in Italy, antenna tuners. They cover 26-28 Mhz, and handle 500 watts. They are in perfect condition both physically and functionally, and they come with instructions.

I'm asking $25 for each, or take both for $40. The price includes shipping.

Harrison, AR..? I have some friends' family down there... anyway. The CPI line of radios are top notch. I've worked on a batch of them myself through the years.

What you don't want to do is get a hack inside your pll circuit to hose things up.

The standard mod for the converted CPI 2000 was four toggle switches mounted on the rear of the radio. One would offset the channel bank above channel 40, another below, one would shift into the rc channel holes and another was 5KHz offset. Use only the CPI Factory Supplied mod sheet unless you want a bucket of trash at the end of your conversion.

The 300 and 400 CPI often required a new prom or retrofit to an Eprom mod which is quite involved. Not for the average tech to tackle.

Great radio, enjoy it

cheers

As you should know, being a Ham, most foreign Hams are limited to much less power than we are in the USA. In fact some CBers, running illegal amplifiers, run more power than many Hams can do legally outside of the USA.

Barefoot with a Wilson 1000. Drive out to one of our "Causeways" (a strip of road usually surrounded by water on both sides) leading out to the beach or island and it's like talking from a boat. Some of the locals swear by pulling those 4X4's into about a foot or two of water.

5351. Intentional interference heard on 28.085, 28.225, and 28.235Mhz

Newsgroup: rec.radio.cb
Date: 2000-11-14 00:00:00 UTC
From: toomanyradios@aol.com
Message-ID: <20001114143605.13029.00001646@nso-cs.aol.com>
Source record: 59271

This morning, I heard sound efffects being broadcast repeatedly on several low 28Mhz frequencies. Sounded like the noise made by creaky bed springs when kids are bouncing on the bed. Mode of transmission was FM and no ID was given. Obviously, this interference was being generated intentionally. Presumably to discourage out-of-band CB'ers who had encroached on 10 meters.

Guys, I know that interlopers are a large and growing problem, but this isn't the way to solve it. This sort of action is every bit as illegal as that of the outbanders with whom you take issue with. Furthermore, this only escalates the problem: it encourages the outbanders to use even greater power levels to overcome your interference, to move even further up into the 10 meter band to escape your interference, or both.

All I can say is this.....
A few quotes from a potential leader of the western world...

"If we don't succeed, we run the risk of failure."
George W. Bush, Jr.

"Republicans understand the importance of bondage between a mother and child." Governor George W. Bush, Jr.

"Welcome to Mrs. Bush, and my fellow astronauts." Governor George W. Bush, Jr.

"Mars is essentially in the same orbit...Mars is somewhat the same distance from the Sun, which is very important. We have seen pictures where there are canals, we believe, and water. If there is water, that means there is oxygen. If oxygen, that means we can breathe." Governor George W. Bush, Jr., 8/11/94

"The Holocaust was an obscene period in our nation's history. I mean in this century's history. But we all lived in this century. I didn't live in this century."
Governor George W. Bush, Jr., 9/15/95

"I believe we are on an irreversible trend toward more freedom and democracy - but that could change."
Governor George W. Bush, Jr., 5/22/98

As a long-time Amateur, I have to reluctantly say you have a point.
Intelligent conversation on 2 meters, like US foreign policy, should be
reported immediately so it can be captured, analyzed, and released into the
wild to multiply. If we could respect the 28 line, everyone's life could be
a whole lot calmer and quieter. We got the geriatric brigade, you have the
rebels without a clue.

5359. Today's Political Joke.

Newsgroup: rec.radio.cb
Date: 2000-11-14 00:00:00 UTC

Message-ID: <20001114153412.18326.00001243@ng-mk1.aol.com>
Source record: 59279

Bill Clinton, Al Gore and George W. Bush died and found themselves standing on the other side of the Jordan River, looking across at the promised land.

The Archangel Michael was standing on the other side and shouted over to the three surprised Americans, "Contrary to what you have been taught, each of you will have to wade across the Jordan River."

As Michael saw their perplexed looks, he reassured them by saying, "Don't worry. You will sink only proportionally according to your sins on earth. The more you have sinned the more you will sink into the water."

The three American sages of political lore looked at one another, trying to determine who shall be the first brave soul to cross the Jordan River. Finally George W. Bush volunteered to go first. Slowly he began to wade out into the river, and slowly the water began to get higher and higher, reaching to his waist. George began to sweat, thinking that all of his sins were coming back to haunt him. He was beginning to wonder if he would ever see the other side. Finally, after what seemed liked an eternity, he began to emerge on the river's bank.

As he ascended to the other side, he looked behind him to see which one of the other brave souls was going next. A shock of surprise registered on his face, as he saw Al Gore almost in the middle of the river and only his ankles barely touching the water. He turned to Michael and exclaimed, "I know Al Gore, Al Gore is a friend of mine, and he has sinned much, much more than that!"

Before the Archangel Michael could reply, Al Gore shouted back, "I'm standing on Clinton's shoulders!"

Well, right back at ya...
A few quotes from a (not even close) potential leader of the western
world...

At an event in Las Vegas on Monday, 09/1800, Gore declared potential
breast cancer victims faced "a long waiting line before they could get
a biopsy or, uh, or a uh, another kind of, what am I looking for, a
sonogram or...." People in the crowd shouted "mammogram."

(Source: Fox News 09/18/00; MSNBC 09/21/00 - The News with Brian Williams)

"He is proposing to privatize a big part of Social Security and he's proposing to take $1 trillion, a million billion dollars out of the Social Security trust fund and give it as a tax incentive to young workers."
(Oct. 25 2000 JACKSON, Tenn. (Reuters)) A trillion is one thousand billion, not a million billion.

"A zebra does not change its spots." - Al Gore, attacking President George Bush in 1992. (The Toronto Sun, 11/19/95)

In a letter, an elderly couple, explained to Al Gore how much they rely on the government-owned Amtrak trains to visit their children and grandchildren in Chicago and on each coast. The couple reminded the vice president that President Clinton relied on train travel to reach the Democratic National Convention in Chicago. The Texas Eagle is the Amtrak train that for years has operated between Chicago, St. Louis, Little Rock, Dallas, Fort Worth and San Antonio. But facing a $243 million shortfall in 1997, Amtrak President Thomas Downs recently targeted four Amtrak routes for elimination, including the Texas Eagle service between St. Louis and San Antonio. "What can you do to save our Eagle?" Mr. and Mrs. Delgadillo pleaded to the vice president.
Gore responded with: "Dear Mr. and Mrs. Delgadillo, Thank you for your letter regarding the protection of the Texas eagle. I appreciate hearing from you. "I share your view that the urgent problem of species extinction and the conservation of biological diversity should be addressed. The first step in saving any plant or animal from extinction is to become aware of and respect the fragile ecosystems that make up our environment ... "Again, thank you for sharing your thoughts with me. I look forward to working with you for the future of our planet."
It's strange he should talk about the ecosystem and extinction since the Texas Eagle is a TRAIN!
(Sources: reported on Fox News Sunday on December 3, 1996, as well as quoted in the National Review and reported in the 12/6/96 Washington Times "Inside the Beltway" by John McCaslin)

Now go figure... Bush has the office now. Lets think about it... I'm outta here!

Source record: 59282

Chuck,
First, I think you should read the original petition to
see just exactly what the whole thing was about. If you
had done that, you would see that it only pertained to
emergency communications, and the petitioner had no understanding
of the rules concerning emergency communications to start
with. The petition contained several false assumptions,
or misconceptions, and as such ~should~ have been rejected.
By the way, the ARRL had nothing to do with the petition. I
think they did express an opinion, just as you have here. If
they were 'wrong' in doing that, then it would seem that you're
'wrong' in expressing an opinion too.
As far as your other opinions, your entitled to them, but
just like the ARRL, you do not represent the majority of hams
opinions, certainly not mine. Have fun, and rant in peace...
'Doc

What is a static Ball? I have heard of Audio Balls,. Please tell me how this ball would have anything to do with static. The balls are there because the end of the antenna needs a smooth edge otherwise if you run enough power a corona will form.

Wild Bill,

Well, what is static? Corona is static caused by the ionization of the air around the tip. All it takes is one teensy little "whisker" or a burr on the tip of the antenna to cause it with high power. Or a "square" edge on the top of the whip. I've even see it form around a loading coil (rare). Hence "static" ball.

Just for fun, a friend and I were fooling around with a 160 meter mobile antenna. At first, the whip had a little ball at the top. With 500 watts at 1885 KHZ, it still formed a corona. Used a slightly bigger ball with the same results. Finally, we went to a 1" dia ball before the corona was stopped. A fellow stopped by, and of course, didn't know what we were up to. So we put the whip with a tiny ball on the tip. Jim transmitted, blue fire started jumping about 6-8" off the end of the antenna! Our visitor jumped, ducked, and sprang backwards about 10 feet! We laughed so hard our sides hurt. Corona is a curiosity, but does nothing for your signal--it actually causes the SWR to go thru the roof!

Is it Citizen's Band, Citizens Band, or Citizens' Band?
Not much difference overall, but I've always wondered.

One common band for each citizen, or band for all citizens?!

i.e. if it was some archaic men-only thing, would it
be Man's Band, Men Band, or Men's Band :o) ?

Afterall, we don't say "Amateur's Band".

Interested in CB radio just politics here is my take on things...

THE DEMOCRATS DID OK WITH MOST FOLK...
Everyone seems to have a decent job and everyone's getting laid and they finally legalized RU-486, they went after big tobacco and are just beginning to hold gun makers and oil titans responsible for various long-standing atrocities, so what the hell, let's screw with a good thing and throw a complete idiot into the mix, shake things up a little, toss in a squinty beady-eyed conservative who makes Dan Quayle look like the chairman of Mensa, a politician whose only a politician because he's already been a failed businessman and a failed oilman and a reviled sports team owner, a man who gets his jobs the old-fashioned way: through his dad.

I still own one of the "originals", unfortunately the new version (made since 11/99 I believe) is not as capable of taking mods.
I love it, if you don't mind not being able to use SSB and only limited power even when peaked. My favorite features are the "auto quiet," the backlit controls, and of course the frequency coverage! A big performer for me that takes up just a little space.
Then I bought a 2970 and fell truly in love...

Maybe it's my radio, but...working my less than 3 month old 2970 as a base yesterday, just looking for someone to talk to, but it seems the entire bands are overwhelmed with what sounds like Spanish television! I heard it from 25.XXX all the way up to at least 29.XXX, clear as a bell, and only from my house. I was driving all day yesterday with the same radio and heard none of this in my truck and have never heard it from home before, though I haven't used this radio as a base for a couple weeks. So what was it?

5396. MB8719 PLL Mod Info????

Newsgroup: rec.radio.cb
Date: 2000-11-14 00:00:00 UTC
From: Foxy <eclip01@hotmail.com>
Message-ID: <01c04e40$9ef4f120$82878685@clip>
Source record: 59341

Ok.....I give up. I replaced the MB8734 in my Cobra 2000 with
an MB8719 just like the book says. Cut the traces to pin 11 & 12
and connected 10-11-12 to the switch just like the book says
and nothing! I have modded these before with no problem. I was
wondering if it's possible there is a new style MB8719 chip
out that can't be controlled or what. It almost acts like an MB8734
does when you try to mod them. Any ideas?
Thanks, Foxy
PS>Yes i did cut the right traces, and yes the switch was right.

I sold one for $145 Cdn already modified - but kept the BC-2000 unit - I think this is a great unit - do you have the manual for the BC-2000 or does anyone else. I desperately need a copy of this manual.

And while you're at it, why don't we abolish our whole Military force since all the "Outspoken Liberal Democrats" think that we have a strong enough force to take on any invading entity, with less pay, with low morale and not enough parts to fix our equipment that we need to protect this welfare loving country of ours.

Let's throw in a politician who claims to have invented the internet but failed to keep his boss in check so our children can surf the internet and see how much of an example our leaders were on PORN sites and history webpages.

Let's pay more taxes and lose our chances at Social Security and Medicare since hey... we all work hard for our money and hell, we can pay for our own retirement can't we?

Hell, we put a pot-smoker in office and boy did he do alot for this country, why don't we throw in an alcoholic? At least beer is legal.

I bet thats a fun job.....drilling a hole in a hardened ball
bearing.... you would have to take it to a machine shop. and use
special tools.

This could be a problem. Best be is to borrow (unless, of course, you have one) a CB walkie-talkie. With the truck running, find a channel that is being interfered with. Check with your HT set to the same channel. Do you pick up the interference (probably). Does it seem stronger or weaker? Usually, conducted interference is only a problem below 1 MHz or so, so I doubt it can be cured by ferrites on the power leads to the stereo and/or CB. Check outside the cab. Is it much weaker? If so, you MIGHT have luck running a double shielded coax. I don't have a coax guide so you'll have to ask around. The extra shielding may reduce your interference by 10 dB or more. Whether that will be enough to allow you to enjoy the rig with little or no interference, I don't know; however, why do you want to run the stereo at the same time as the CB?

Pretty arrogant and ignorant considering that the United States has signed international agreements as to what services exist where. I remember one time whilst on Guam Island, the radiomen were putting up 40 Kw transmitters with many simultaneous channels of teletype on 80 meters (an international ham band). I wrote down the carrier frequency and the number of channels being keyed, the bearing, signal intensity, and equipment used to monitor this. I sent a telegram to the FCC in Washington. 3 days later, a blast came down to the Navy station from no less than the CHIEF OF NAVAL OPERATIONS! In it, he stated that the United States had international agreements, that the frequency in use was an international amateur frequency, and henceforth all transmissions in the amateur bands will cease. End of message. The problem, as I see it, is that if the HFers keep moving both up and down from alloted channels, sooner or later another service will complain, or, worse, another country. I talked to Webster, NY from Guam using 15 watts of sideband on 10 meters. Guam is roughly 14 degrees North of the equator and South of Japan - in the Marianas. While not halfway around the world, it is probably pushing a good 10,000 miles to the

Eastern seaboard of the U.S. If 15 watts can do this, imagine what
1500 watts can do!

The hams have a similar deal. It's called DXCC. It has probably caused more hate and discontent than anthing else invented by the ARRL. The reason I mention this is when I was on Guam I was trying to get phone patch traffic back to the US (back then, in 1968, the telephone cost $4.00 per minute, 3 minute minimum). The frequency was clear, I asked if it was in use, no response, so I called. A Hawiian ham came back and said there was an important DX contest going on so move my phone patch traffic out of there. Nice. I was calling from KG6NAC - the US Navy Hospital on Guam. Present were a few nurses, one doctor, and a man recovering from wounds. Very nice display for all to see and hear. Maybe one of us will be injured in a crash with no cell phone and only the CB working - and the idiot on the other end tells us to take our 'emergency' traffic the heck off since he is trying to talk to Europe. Great country we live in. We protect the brain-challenged.

> Why are you getting mad at me cause you overpaid for a amp

Here we go again. Just because you sell your items for $10 over cost, doesn't mean that is the way it is done in a retail establishment. $400 for a new 5 pill or $450 for a 2x4 is what typical prices are on the retail end sometimes 10% over that. Most people do this as part of a living for profit, not to give them away.

From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <gfh51tolem63pijgdk4hh14rjiab1c4ujg@4ax.com>
Source record: 59180

Greetings!

A simple mag mount antenna can provide a low SWR on it's own, only it needs a *specific* length of coax to do so.

IN a graphic sense...

```
-[]==========================---------
```

This simple mockup - can be thought of as the antenna [the WHOLE antenna] - the outer shield of the coax is only connected at the connector - and is left open where the mount is, the whip portion is the single hyphen '-' and has a specific length.

This is essentially what a mag mount antenna appears as when checked with a DC voltmeter. Ground only on the shield, and at the connector.

The whip is exposed, and is where the tuning occurs.

Coax exhibits 50 ohms impedance along it's length. However, the above antenna is not considered *balanced* unless you put a frequency that it's tuned for, thru the connector into the coax, and the antenna works with the coax, and the shield - to form a simple antenna called a coaxial antenna and provides [roughly] 72~50 ohms of impedance at that frequency. A 1.7:1 SWR to 1:1 SWR.

This is what magnetic mounts shoot for - balanced loading to provide proper impedance.

Since coax is not electrically connected to the metal of the ground plane the mag-mount is designed for, to be held in place by, the metal affects the tuning of this design.

The metal of the vehicle - in close proximity to the whip - is capacitively coupled to the whips radiating field. [Get your Physics teacher if needed...;-] The metal of the vehicle works with the radiator - and a working antenna system is formed.

Going back to the coaxial antenna, compare that to the mag mount, schematically...

```
.. |
.. |
.. |
.. |.
.. ||
-[]=================*------------
.. ||
```

.. |.
.. |
.. |

We still have the same coaxial antenna, only now, it's got a sheet of metal. It's still insulated from the metal at DC potentials. This affects the tuning and is important to it.

It's why coax length becomes a key issue with a poor working ground system. The metal of the vehicle working with the whip, in a properly working system, makes the antenna appear resonate and a low SWR - due to some key interactions with the two parts of this system, the whip being one side of the radiator, while the other half is a capacitively coupled counterpoise, or a method to generate the ground image.

When the whip can work with the metal and can capacitively couple to it effectively - the antenna can be made resonate and give a low SWR. The vehicle, or any ferrous metal, can form a ground image. It' doesn't need to be electrically attached to ground, only in proximity to it.

If the whip can't couple with the metal effectively the antenna system suffers, the whip cannot be made resonate and an offsetting ground image can't form - hence poor performance an a high SWR. The impedance of the whip is now different - and shows as a higher SWR.

Coax, in itself, can't provide the tuning mechanism directly. It has to be made using a property that the *shield* works the whip and is the counterpoise element. [See the coaxial antenna above] Using a specific length of the whip, combined with a specific length of coax, the two elements work to form a coaxial antenna - using a method called conjugate matching, as a system to provide the 50 ohms impedance needed in todays CB world.

Why doesn't it work with power, RF heating is one aspect, plus adding the extra capacitance and the inherent resistance of the wire in both the whip and the coax, including the connections - adds to the problem. Most of the problem lies in the reactance of the capacitive element that exists between the whip and the counterpoise.

Excessive power, causes dielectric breakdown and if severe enough - ozone production. You can burn paint, and your friends will admire the smell of ozone fragrance emmanating from your system - when you push power thru this type of system.

Does this help answer the question?

Greetings!

Heck, I gave up on Amateur life a long time ago, got tired of
listening to ETOH when the station sits keyed up babbling on about
everything in their life...

...Since it happens on CB too - why ask why? You stand a good chance
of actually landing on a conversation with some intelligence on the
typical 40 channel CB - while you have a lot of crying on Amateur
bands to wade thru.

Don't take this too personally, but I too, say...

"Get over it, and keep your nose clean..."

There's a lot more to the above statement that everyone should
recognize...

On Tue, 14 Nov 2000 08:17:02 -0700 (MST), while the modem was
pondering it's navel, freebird63@webtv.net (chuck) dissertated the
following:

:+> Well the ARRL did it again, they strongly opposed the lifting of the 155
:+> mile rule on CB's. So what that means is every time yo shoot skip and
:+> talk to someone more 155 miles away, your breaking the law.
:+> You know i wished ARRL would keep their noses out of other peoples
:+> business, no wonder people don't want to become ham radio operators,
:+> hell I am and I am thinking about turning my license back in to the FCC.
:+> The reason's, well lets see one of the reason's was, they don't want CB
:+> to be competative against amateur radio, hello it already is and there's
:+> nothing they can do to change that. The way ham's look down their noses
:+> at CB'ers its no wonder.
:+> Another reason, it would promote the use of illegal linears, come on
:+> there are already enough linears out there. My attltude towards linears
:+> and big ham operators, the less power I use to make a contact the better
:+> I feel.
:+> Come on guys can't we all get along, we are all out there for the same
:+> reason, to make contacts and help out others during times of
:+> emergencies. But because the hams have that license and can run 1500
:+> watts.....well its all a status symbol, something i don't want or need.
:+> Not that they would admitt it, but the hams are still bitter over losing
:+> the 11 meter band and will always look for ways to contane 11 meters.
:+> Yes I will admitt the 11 meter band has its problems but then take a
:+> listen to 75 meters or 20 meters during a contest, there's lots of rude
:+> people on the ham bands too.
:+> To bad all the folks on the 11 meter band could not get together and go

:+> toe to toe with the FCC and ARRL.
:+> Afterall the airways belong to everyone.

The Galaxy blue and skipper are nearly identical, I think the skipper has multiple power settings and an independant pre-amp which would be preferable. The white face is a cheap, low quality, mass production profit maker, I'd lean towards the skipper. The Skipper 350 should nearly double the output of the 225, and run cooler doing it.

your getting an image or a spurious harmonic off of something.... TV
signals are about 3 mhz wide and the audio is FM. no room for um at
27-28 mhz. if you have a preamp running look inside it and make sure
all the parts are mounted flush with the board... sometimes if the legs
on a part in an rf amp are too long it will cause your problem...

I thought you had to multiply your power by 4 times just to get one
s-unit...how can you say that going from the 100watts of a 225 to the 200
watts of a 350 will help that much. Maybe I am confused. I am sure someone
will tell me if I am.

Do the new ones still have that nice sloped dash in the middle. I mounted mine right there under where the stock tape player goes. It seems very solid there.

Greetings!

I.Q. of 3? ROTFL!

Oh plueeaze! You're giving some of the Hams way too much credit.

Take those sunglasses off, and pull out the peanut butter in your ears! You are just as ignorant as the local town drunks at a bar, and as opinionated, if not worse...

The reason why many left CB is due to their own inherent faults, they wanted to have their own little "cliques" - I can't, and will not, participate in such activities. Listen to the carp!

What's so funny about your comments are;

...those that go the Amateur bands, are not as smart as many of whom know better than to get involved with a "group" that has already shown it's inability to control itself.

....Why bother "evolving"? All one person does in switching over to Amateur is "involving" into another realm with it's own set of complex problems that few can understand, and are hopelessly unable to fix.

...anyone with a scanner, or a shortwave radio - can describe to you the sheer number of people that are on the Amateur bands, that act like the "idiots" and "morons" you are supposedly claiming a CB'er can be.

So? You're pointing the fingers in the wrong direction.

Many Amateurs flame the CB N.G. due to "oh so you run a linear" - listen to yourselves! A bunch of Overdeviated, Overpowered, Overimbibed, Obnoxious, Inconsiderate, Instigating, Ignorant snots that feel they can work above the letter of the law.

Don't believe me? Check the Marine and CB bands when some of the folly-folk that you claim are intelligent Amateurs sign off - they hide there too. No call signs, but easily discerened by their own voices - USING THE SAME RADIOS!

[er, excuse me sir, you're bleeding...What?!? Same to your Mother too! (beep)]

LOL!

A lot of it surrounds ETOH - the typical drinker that got run off CB due to the neighbors complaining about their TV's fuzzy reception and funny-sounding audio. Oh, we can't talk about this to ourselves, let's

get some friends out here and see how long we can tie-up a repeater before the timeout occurs...LOL!

This stuff happens more than you think, either on CB or on Amateur.

Don't be so blind.

At least CB'ers can sleep it off without any severe damage - and no worry about repeaters either. At least they aren't locking up a scanner at the local police department while the off-duty officers laugh while listening to people within your own ranks *you* can call Amateurs.

I have a *lot* more fun on CB without the drukard Dictators expressing their views without just cause. I can work around the drunks more freely on CB than on Amatuer bands.

If I want that kind of abuse, I can save a lot of $$$ and hassles by avoiding those "ETOH cliques" altogether. Save your own kind, don't waste your time on trying to promote a better "brotherhood" by insulting yourselves like this on this N.G.

As long as there is "OO's" out there willing to turn their heads and ignore constant violations either on repeaters or simplex, sure, you have your opinion and I have mine.

I have yet to see any legislation on Amateurs that force them to abide by the letter of the law. Blame CB all you want, the Ham community is hiding out by themselves and have little self-control over their own ranks.

Yes, I'm serious. I could go on, but I don't want to offend any more reprobates. When you can enforce your own laws and regulations on offenders, I'm willing to listen. Until then, I suggest you spend more time "reading between the lines" and "listen to juxt of the conversation and not just what they say."

...[sigh]...

Sorry to the CB N.G., but thats the way I see it.

I'm EOT on this thread, I've wasted far too much bandwidth on such an off-topic issue already.

On Wed, 15 Nov 2000 12:55:04 GMT, while the modem was pondering it's navel, TR@sky.net dissertated the following:

I remember those old radios. You could just stay on 1 channel, and hear what was going on all over the band. You didn't even have to turn the knob.

I have a Realistic TRC-212 (21-1662) for sale. This is the full size 40 channel unit with carrying case. High/low TX power switch. Around 5 watts output on high. LCD display with TX and receive meters. Great shape. Original long (around 5 feet) center loaded antenna. Has external antenna, power and charging connections. Has an 5-pin external mic connector as well. Requires 8 'AA's or 10 'AA's rechargeables and you can recharge the batteries WITHOUT taking the batteries out.

Asking only $ 45.00 (US$) INCLUDING shipping from Canada
Great deal ! ! !!
A Picture can be e-mailed.

Looks like your looking for someone to argue with Gary.I never implied that hams are bad radio users did I?As for the fuses it seems to me he doesnt know how to properly tune it.I never had a problem with it.When I tune it for him it works fine.What I dont understand is what makes you think Im a CB man as you say?Is it possible I may have a ticket also?Maybe I do 25+ wpm?Compare tickets?Whats that going to do?I dont understand Gary.
I work the entire spectrum including CB!I also talk 27025.Its all good to me Gary!
In a nutshell,having a ticket doesnt necessarily mean you know everything about electronics!
Have a happy thanksgiving and be happy!!!

There are several models of the CM-10, let me know if this does not help you.
BTW: A CM-10 PLUS can not be modified.

5466. Re: linear amp

Newsgroup: rec.radio.cb
Date: 2000-11-15 00:00:00 UTC
From: Skipp <skipp@pilot.ucdavis.edu>
Message-ID: <8uuglt$83t$1@mark.ucdavis.edu>
Source record: 59370

: christopher <chrism@centurytel.net> wrote:
: ok,i hear a lot of comments about a linear amp; how about a description of
: it and what other types of amps there are?

Hi Chris,

Linear "RF" Amplifiers are devices placed in the antenna (coax) line of a two-way radio. They can be made for many different frequencies of operation. That means ham, commercial, broadcast or not-legal-for-use CB radio operation. (Linear "Audio" Amplifiers are your more common stereo and auto radio devices.)

Most often made with special transitors or tubes, they are set up to activate when the transmitter is keyed, increasing the radio (or exciter, same thing) output. Since CB radios are legal with 4 watts output, most CB amplifiers drive (input) with 4 watts of power. The output can be what ever the typical circuit is designed for. Ham radio amplifiers often drive with larger values of input, say 60 to 100 watts as an example. Ham transmitters (tranceivers) often have higher output power levels.

Certain designs lean toward common output power levels by convention. Two, four or six amplifier devices are often combined in parallel for more circuit gain.

Linear refers to the ability of the amplifier to increase the power while keeping the original signal clean of distortion. Amplifiers are designed and operated in different "classes" of operation. Don't let anyone buffalo you, class AB is the most practical and best to operate with voice type radio signals. By nature, the amplifier's device (tubes or transistors) operating position is set to a value (with an internal voltage or current adjustment) where it's operation is hopefully AB (linear). The adjustment is then left alone after the initial setup properly done. "Tuning" an amplifier is a diffent animal described below.

Although not legal to operate in the CB Band anymore, linears for the frequency range in and around the CB band were once legal for mfgr and use in certain applications. Now, all mfgr of these types of amplifiers are not allowed by law, doesn't mean it doesn't happen... just that it's not allowed by law. Like our classic american drug war...

You can often find used older CB amps sold on here and through flea markets and grey market cb shops. You can find amplifiers now made in secret locations which tend to be not as good as earlier designs and construction methods. There are exceptions of course...

The ham radio people now have to purchase amateur amplifiers which have the 10 meter band (the band next to cb 11 meters) deleted. Hams can

purchase kits and mods to restore 10 meter operation to the "blank" band switch. Many ham amplifiers operate over a range of bands or frequencies. CB band amplifiers tend to be only single "mono" band.

Tube linears are still common and tend to be for higher power amplifiers in many cases. Tube circuits often have at least two or more adjustment knobs on the front where the amplifier has to be quickly "tuned and loaded." The procedure is often detailed in the owners manual. Many times, max power output occurs nearly (but not exact) equal to the best knob (tuning caps) adjustment points... when the amplifier is placed into a good/proper antenna load/termination (MOST IMPORTANT). That's where dummy loads are a big help. Tuning a tube amplifier into a mis matched antenna is a source of big problems and a potential for trouble.
Tube amplifiers require some type of power supply, sometimes large enough to require another or "external box" with the main Amplifier Chassis.

Transitor linears don't often have tune or load adjustments, they are considered "broadband" in nature and less forgiving of mis matched loads. When operated properly, they are much more practical for mobile operation and don't require a warmup time like a tube (not all) circuit might. Most transistor amplifiers operate off a DC supply direct, so you don't need an external or seperate power supply for typical auto use. Again, linear transistor operation is best done with the amplifier set up AB mode. Common designs have two transistors inside for about 100 to 150 watts output using "mrf" type transistors.

Hope that provides you with some information... I'm sure others will chime in with good and bad information, time will tell.

Feel free to Email me if you have specific questions...

cheers

"Handy Andy" <CodysPC@Iserve.Net> wrote in message
news:p4851tsh9p5lpi5oo6uhqsucbqnhh5ft8u@4ax.com...
Greetings!

I.Q. of 3? ROTFL!

Oh plueeaze! You're giving some of the Hams way too much credit.

Take those sunglasses off, and pull out the peanut butter in your ears! You are just as ignorant as the local town drunks at a bar, and as opinionated, if not worse...

The reason why many left CB is due to their own inherent faults, they wanted to have their own little "cliques" - I can't, and will not, participate in such activities. Listen to the carp!

What's so funny about your comments are;

...those that go the Amateur bands, are not as smart as many of whom know better than to get involved with a "group" that has already shown it's inability to control itself.

....Why bother "evolving"? All one person does in switching over to Amateur is "involving" into another realm with it's own set of complex problems that few can understand, and are hopelessly unable to fix.

...anyone with a scanner, or a shortwave radio - can describe to you the sheer number of people that are on the Amateur bands, that act like the "idiots" and "morons" you are supposedly claiming a CB'er can be.

So? You're pointing the fingers in the wrong direction.

Many Amateurs flame the CB N.G. due to "oh so you run a linear" - listen to yourselves! A bunch of Overdeviated, Overpowered, Overimbibed, Obnoxious, Inconsiderate, Instigating, Ignorant snots that feel they can work above the letter of the law.

Don't believe me? Check the Marine and CB bands when some of the folly-folk that you claim are intelligent Amateurs sign off - they hide there too. No call signs, but easily discerened by their own voices - USING THE SAME RADIOS!

[er, excuse me sir, you're bleeding...What?!? Same to your Mother too! (beep)]

LOL!

A lot of it surrounds ETOH - the typical drinker that got run off CB due to the neighbors complaining about their TV's fuzzy reception and funny-sounding audio. Oh, we can't talk about this to ourselves, let's get some friends out here and see how long we can tie-up a repeater before the timeout occurs...LOL!

This stuff happens more than you think, either on CB or on Amateur.

Don't be so blind.

At least CB'ers can sleep it off without any severe damage - and no worry about repeaters either. At least they aren't locking up a scanner at the local police department while the off-duty officers laugh while listening to people within your own ranks *you* can call Amateurs.

I have a *lot* more fun on CB without the drukard Dictators expressing their views without just cause. I can work around the drunks more freely on CB than on Amatuer bands.

If I want that kind of abuse, I can save a lot of $$$ and hassles by avoiding those "ETOH cliques" altogether. Save your own kind, don't waste your time on trying to promote a better "brotherhood" by insulting yourselves like this on this N.G.

As long as there is "OO's" out there willing to turn their heads and ignore constant violations either on repeaters or simplex, sure, you have your opinion and I have mine.

I have yet to see any legislation on Amateurs that force them to abide by the letter of the law. Blame CB all you want, the Ham community is hiding out by themselves and have little self-control over their own ranks.

Yes, I'm serious. I could go on, but I don't want to offend any more reprobates. When you can enforce your own laws and regulations on offenders, I'm willing to listen. Until then, I suggest you spend more time "reading between the lines" and "listen to juxt of the conversation and not just what they say."

...[sigh]...

Sorry to the CB N.G., but thats the way I see it.

I'm EOT on this thread, I've wasted far too much bandwidth on such an off-topic issue already.

On Wed, 15 Nov 2000 12:55:04 GMT, while the modem was pondering it's navel, TR@sky.net dissertated the following:

5490. 10 KC offset Info. Please Help

Newsgroup: rec.radio.cb
Date: 2000-11-15 00:00:00 UTC
From: Speedy <racinghomer@hotmail.com>
Message-ID: <8uvkcn$3qs$1@ins21.netins.net>
Source record: 59394

Hello Guys,
I was just wondering how hard it is to make a radio have a 10 KC offset for the standard channels say 3a,7a,11a,15a, and 19 a ? Is it a standard procedure for most radios or is every radio a different procedure ?
Can this be done with a fair amount of electrical/radio knowledge , or does it have to be done by a "professional" ?
Thanks for all your answers,
Speedy

BTW How much does it usually cost for parts ?

5491. Re: Intentional interference heard on 28.085, 28.225, and 28.235Mhz

I think you might just drive it with a barefoot radio. An 8877
doesn't
need much drive at all. It has a very low power grid disipation, so
the
slightest over driving will send you to the store after a new tube. I
don't know about you, but at over $900 a 'whack', I couldn't afford
too
many new 8877's!

Is anyone aware of any local clubs or groups to the Portland, Oregon area? Specifically in the Oregon City Area south of Portland.

Also, I know there are certain channels that are generaly used by groups or fpr specific reasons, can anyone advise me on what channels are commonly used for what inthis area?

I am running a Cobra 40ch soundtracker with a 3' stainless whip and so far have only been able to get out a couple of miles once.

Am planning better setup once sell the '78 chev and get back to an 87 Toy <g.. Super UL and 5mpg sucks <chuckle>

Email reply or cc preffered.
Thanks much!

Not answering your question but a Pride 300 uses one 3CX250???
700 peak watts or there about.

Mike
.....
....
Pride 300 uses 4cx250b. It is an awesome driver, but may be too much even on low unless you can drop the load to limit the drive. Carrier of radio needs to be 1 watt or less.

Hello 'Doc....

Do you think a Galaxy DX2527 (variable from 2 to 10 watts RMS, with about 30-35 watts peak would be enough radio, to push an 8877, or would I need a 100w HF rig like a Yeasu, Kenwood, or Icom.... To be honest, I would really like to run just a radio, and this amp (without a seperate driver.., if that would be at all possible.) I was seriously thinking about getting the Ham license anyway, If that HF rig idea will work, that would be a good excuse to go and take the test.. I had no idea those 8877's were that expensive!! I thought they were about $600... You're right, I really don't want to have to replace that tube anytime soon..... Thanks for the help.

Hello Dexter: Well moving out from your parents house is out, at least for a few years yet. I was refereeing to some of the ham guys who still live with their folks, when they are 37 years old.

No I don't pick up a lot of girls with my 64 Buick, this is a tongue and check expression, or humour, ah! To pick up girls one must be cool and always be a gentlemen. There well be ones you that wont even talk to ya, and there will be others who you can't do anything wrong with!

"Do I think the Professor knows what he's talking about?"
Boy does this leave the door wide open!
Yes and No, to that question. I don't think the professor is the one to go to for an amp. Brian has posted some pretty good articles, but one has to wade thru the crapp of his unfriendly ranting. There are others who can supply well known and proven 2 pill amps. I like the Texas Star amps, myself.

Yes he does appear to be a jerk at times, buy again has posted some pretty good stuff. He has asked some good questions, and argued some points rather well. If Brian could just tone down the unfriendly side a bit, this would be a significant improvement in his personality. Arguing a point here sometimes is quit healthy, you will learn things the hard way, but the point of all the arguing is learning a few things. I myself have learned many things just by reading the newsgroup here. And have been in some heated debates, and had to offer a "I stand corrected" at times. The guy who was perfect was nailed to the cross, so go ahead and ask questions, and dig into things. Its neat to find out stuff that isn't in the books, or to discover the books have it wrong!

Remember that a radio and amp won't work unless you have a good antenna.

The comment you made about watching out for your dead key is the prime reason we try to keep amatuer radio equipment from reaching the hands of kids like you who think that dead-keying on top of some-one else is cool. you wont be alone,there are plenty of other egotistical bastards out there who think they own a frequency once they start running power.Hopefully you will never learn the fine art of antenna tuning, but if you did you would not need a kicker anyway.Normally i would wish you luck but i dont like youre attitude.TOODALOO.

I think that ought to work fine. You don't need anywhere near 100
watts
to drive the thing. ($900.00 is a very conservative guess)

> Yeah!
> Scary as Hell isn't it?
>

I'm telling ya...

Wait a second, lemme ask a political question... what are your views as a United States citizen? I'm sure you are a Democrat, and that is cool, but why would you not agree with GWB's views? Is it because he is not part of your political party?

I have been a Republican for a few years since joining the military in '90 (thats why I'm really involved in politics). And I've agreed with Prez Clinton on his views back during the '91-'92 campaign but since then, my job has hindered my morale because of the downsizing. And then it just amplified even more during his 2nd term. I have never been in a situation where I directly relied on my income and work enviornment "ever" prior to joining the military. And now, I needed to get involved because of less personnel means working extra hard and longer hours with less pay (not actually getting paid for the amount of work we servicemen are doing), funding for quality of life of military housing and quarters (shitty living standards), struggling to make ends meet because the amount of pay we receive and the COLA (Cost of living allowance) weren't ample enough for areas like San Diego, San Jose, Hawaii and so on so forth. Stuff like this got me all riled up.

Then there's the issue of taxes. I like my money due to the fact that I don't make squat for the field I work in. Therefore, a hefty return would be glady accepted for bills, investments and stuff like that.

Guns. Why all the hooplah about gun control? The only gun control view I have is personal control. If I was to break the law, honestly, if found guilty, I would have to take responsibilty for my actions. Law abiding citizens shouldn't suffer consequences of complacent gun owners and criminals. I'm not going into intricacies of Austrailia and Britain who have abolished gun ownership but wouldn't you want to protect your family and property from invaders? I sure would. Especially with the Wackos and Crazies out there who don't have the right frame of mind to be peaceful and to mind their own damned business besides the fact "they" want to take your shit (your rights, your life, your wife (that would be a good thing at times), family and your property).

Blah, blah, blah... I could go on for days. I'm not really here to change your mind about issues. Everyone is entitled to their own opinions but keep in mind the things I've just mentioned... LIFE,

FAMILY and PROPERTY. This should be the key issue everyone should be interested in. And I believe everyone has the right to protect that; both Liberal and Conservative persons. THAT IS YOUR RIGHT. Keep that in mind. I don't know how you feel but personally I love this country because we as a country are free to do anything we want within the law. That is why I joined the military. To protect myself, my family and everyone within (including you and everyone on this NG).

And once the government takes away any one right, this country is no longer free. We the people should be able to control ourselves not the leaders we voted for who make command decisions for us. We make the decisions. Believe that. Thats why we vote. Let us police ourselves. Let us take care of our own and not international interests. Let us be a team... that's what it's all about.

PEACE to my bigradio brethren and HAM radio enthusiasts.

I am SUPAHMAN... and I'm back reading the mail.

Little Mary was not the best student in Sunday School. Usually she slept through the class. One day the teacher called on her while she was napping, "Tell me, Mary, who created the universe?"
When Mary didn't stir, little Johnny, an altruistic boy seated in the chair behind her, took a pin and
jabbed her in the rear.
"God Almighty!" shouted Mary and the teacher said, "Very good," and Mary

fell back asleep.
A while later the teacher asked Mary, "Who is our Lord and Savior?" But,

Mary didn't even stir from her
slumber. Once again, Johnny came to the rescue and stuck her again.
"Jesus Christ!" shouted Mary and the teacher said, "Very good," and Mary

fell back asleep.
Then the teacher asked Mary a third question. "What did Eve say to Adam after she had her twenty-third
child?" And again, Johnny jabbed her with the pin. This time Mary jumped up

and shouted, "If you stick
that damn thing in me one more time, I'll break it in half!"
The Teacher fainted.

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't mean a THING if you ain't got that SWING!!!!!!!

What pay raises? In the early '80s, Reagan gave the military 28% in a 3 year period. The highest pay increase was 11%. You think that 3.4 and 4.4% combined can beat that? I think not. It was all a political move to project to the American public that he "kind of" cared about his military. Explain to me why the retention of the Military plummeted after the '92 campaign for Slick Willie and Igor? You won't. That's why Dick Cheney is GW's running mate. He was the Secretary of Defense during the Bush Administration. He knows. Listen to what he presented. That is the truth.

Alcohol vs Pot... hmmmmm. Budweiser, legal... Marijuana, illegal. Deaths attributed to alcohol because of stupid freaking idiots, high; drunk drivers, self-inflicted suicides, people that can't handle their liquor. Deaths attributed to marijuana, high; lung cancer, birth defects, gang/drug dealer related shootings. Both are dangerous but alcohol is legal, pot is not. Lets bring back the Prohibition then. And legalize Marijuana. Whats the odds of deaths changing? None.

For the record,I have the upmost respect for my Elmer.Hes getting a bit up there in age and tends to forget things at times.
Second,last year I made the mistake of arguing over the Inet and posted some personal info.For weeks I was getting emails.
Im not about to do that again!For the most part I run legal Gary.I do have the capabilities of running more power as Im sure you do.Doesnt change the fact I like the looks of Jays antenna!If you can build one thats as nice as his my hats off to you sir.Have a great day and move on.

More than likely 27.985.

Are you aware, Meth, that using 12 or above in that bank and any higher banks puts you in the 10 meter ham band? If not, I would get aware of the actual frequency you are transmitting on PDQ, ASAP, and STAT. Or learn to whistle JPS Liberty Bell March and wait for the big shoe to drop.

I did not tune in, but there were several nets running last night since the European Space Agency launched the new amateur radio satellite Phase 3 D around 0107 UTC. The nets, some on 75m, were carrying news live as the launch, and flight in to geo transfer orbit, progressed. He may have been on the air for that reason.

This modification is provided "as is", and is subject to change without notice. Kenwood Service Corporation makes no warranty of any kind regards to this modification procedure, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose. Kenwood Service Corporation shall not be liable for any error or for incidental or consequential damage in roujunction with the furnishing, performance, or use of the modification procedure.
It is illegal to operate outside the limits of your class license or permits.

Disconnect the power cord and antenna coax from the transceiver.

Remove the top and bottom covers.

Remove the top screw from each side of the front panel assembly.

Loosen the bottom screw from each side of the front panel assembly.

Carefully rotate the front panel forward to gain access to the Control board (X53-3690-10).
This board is mounted vertically against the body of the transceiver. It is not the board that is mounted in the front panel assembly.

Locate and remove the chip resistor R41 from the Control board.

Assemble the transceiver then perform the CPU reset procedure by holding the A=B button depressed as power is turned on.

Those idiots normally hang around 3950 or 3960 most of the time. Well if they did do the above I guess they will find a NAL in the mail in a few days. If that gets them to clean up their act, so much the better. As Hams go we don't need Bozos like than on the bands anywhere, and the Ham community has been asking the FCC for years to get rid of people who can't follow the rules. I hope he, Riley, nails them good. Their going to be pissed when the towers get ripped out. Its been done before. When the FCC says they are going to take everything, their not kidding.

John Bond, the late editor of Road and Track for many years, had several rules of automotive engineering (eg. give a Frenchman a piece of plastic and he'll do something stupid with it).

On British cars, "There will always be an England. When they turn off the key, the engine will run on and on and on"

Hmmmm....I think it's safe to say channel 6 is "owned" by a select group
of individuals...those with the biggest radios.

And since you have been in the military, your views have been skewered. I'm not about to challenge your personal views, you are right, that is the right we have as citizens.
Talk about fuzzy math, check how ol' Ronnie's math holds up. Reagan increased military SPENDING (remember the $1500.00 common wrench purchases that are responsible today for our nations record trillion dollar debt, the one YOUR family will be paying for years to come?) to his beholden interests. If you were a manufacturer of wrenches, this was a boon for you. The majority of increases did NOT go to personnel, they went to private industry subcontractors. By counting this record sending, yes , Clinton pales in comparison to Bush and Reagan. Military morale plummeted during Clinton because he slashed all the bigwigs (read:officers) in the military's indiscretional
spending. If you had and endless supply of cash to do with as you wish, award contracts to your friends, etc., and someone suddenly took it away, yea, you're morale would plummet, too. So the officers morale made it's way down the ranks to the enlisted who emulate the officers.
I hesitate to generalize, but many (NOT ALL) in todays military NEED to be told what to do. They are are afraid to think for themselves. These types make their way to corporate America and become someone's "YES" man! This is NOT our father's military.

Dick Cheney is the shrubs running mate for one reason only, to assist him in the military vote. Same with Colin Powell standing by Bush Sr.'s side. Can you say, "token?"

On the pot issue, you cannot cite one single incident or statistic other than the propaganda brought forth by the historically incorrect Drug Free America (and their related entities) showing any correlation whatsoever between pot and birth defects, because it isn't true.

The AMA's own distinguished Dr. Lester Grinspoon said, and I quote, "Over years of research, marijuana has proved to be one of the safest, therapeutic substances proved to man"....this from the AMA book itself. Lung cancer? If I wanna kick back and pull bong in my living room, it's none of your or anyone elses damn business, but I damn sure should have the right. Same with gasoline..if I wanna suck gas from a tailpipe, why should you care?

Gangs and drug related? Half right. Forget about the pot for a minute and you have a point. Enter pot into the equation and you now have no validity. The last violence to occur in America over pot was with the Jamaican posse in the eighties, and I ain't talking about isolated incidences. Have you ever in your life heard of someone robbing to support their pot habit, or getting violent after toking a joint? Or

overdosing on pot?

I agree with the prohibition stance or legality. Prohibition of alcohol was induced by the countries powerful and wealthy, same with pot. The Hearst (newspaper magnate) dynasty was instrumental in making pot illegal (yes, it WAS legal) because they had strong ties with Dupont (Quayles family has controlling interests) who was responsible in the advent of synthetic fiber that competed with "hemp".....hence the "reefer madness" was born, and sadly still proliferates into segments of society today. Man made alcohol, how does one begin to justify legislation against a wild plant in it's primitive form? Same with the cocoa leaf. Noone ever died or became violent or overdosed chewing the cocoa leaf..many remote tribes today still chew the leaves much in the same way we take to caffeine today, for that "kick" to jumpstart your day and give a little boost of energy.

If it benefits the political parties, they will act on it, and if you believe for one second they are acting to protect me and you, well, that is your prerogative.

By the way, I hope you don't have to go to the front line when the shrub continues his party's business-as-usual tactic of bombing a small country to take the focus off the coming recession.

Yeah, I know, thanks, I rarely go freeband TXing because I respect the hams (not to mention that Grant probably doesn't top out over 8W PEP on AM) but it sure as hell is interesting to hear a guy in 10m sitting on his porch in St. Louis and working a QSL from Australia!

Subject: Depressed Blonde

A young blonde woman in New York was so depressed that she decided to end her life by throwing herself into the ocean. She went down to the docks and was about to leap into the frigid water when a handsome young sailor saw her tottering on the edge of the pier, crying.

He took pity on her and said, Look you've got a lot to live for. I'm off to Europe in the morning and if you like, I can stow you away on my ship. I'll take good care of you and bring you food every day. Moving closer, he slipped his arm around her shoulder and added, I'll keep you happy, and you'll keep me happy.

The girl nodded yes. After all what did she have to lose? Maybe a fresh start in Europe would give her life a new meaning. That night, the sailor brought her aboard and hid her in a life boat. From then on, every night he brought her three sandwiches and a piece of fruit and they made passionate love until dawn.

Three weeks later, during a routine inspection, she was discovered by the captain. What are you doing here? the captain asked. I have an arrangement with one of the sailors, she explained. I get food and a trip to Europe, and he's screwing me.

He sure is lady, the captain said. This is the Staten Island Ferry.

Well the first thing their going to want to know is how to "mod" a 50 watt
2m rig to run on the MURS frequencies for more power and range. The next
thing is how to keep them from showing up on 2m.

SHEER numbers? And CB doesn't have its own share of these? Methinks it
ain't got anything to do with the particular band. On BOTH services,
the sensible people far outweigh the "idiots".

>
> So? You're pointing the fingers in the wrong direction.

Funny. I've been seeing LOTS of "hams" being given warnings, NALs, and
revocations on www.rainreport.com for "working above the letter of the
law".

>

> Amateurs.

How would a ham repeater "lock up" a scanner at the PD? I doubt the
off-duty officer would be hanging out at the PD after their shift.
>
> I have a *lot* more fun on CB without the drukard Dictators expressing

Why? Hams have FAR more spectrum than CB, and one can easily get away
from idiots by changing BANDS, not just a few channels!

> If I want that kind of abuse, I can save a lot of $$$ and hassles by

WHAAAAAT? You've never heard of Part 97? In addition, the Amateur Ser-
vice is supposed to be "self-policing" and hams are REQUIRED to abide
by the rules. If they don't, they get in trouble. The bands have
experienced quite a bit of cleaning up since Riley Hollingsworth came
aboard and will continue to do so. See Rain Report.

Tell me Leland..... why would "THEY" (your word) bother MODIFYING a MURS rig for 2 meters when it requires no license to simply BUY a full featured 2m rig and run it on 2m now.....
hmmmmmmmmmmm?

For that matter..... What do YOU suppose keeps "THEM" from showing up on 2m NOW??.... hmmmmmmmmmm?

i do believe that you need to learn the "fine art" of a joke

i have NEVER dead-keyed and i DO run a PLENTY powerful CB right now

i KNOW how to tune an antenna and have achieved a 1.1:1.2 ratio

and i will NEVER dead key

it's a joke...lighten up.

i am posting a second reply to this group simply to emphasize even MORE how insulted i am at what you said.

i have seen many arguemtns in this newsgroup over jokes that people didnt like. and always those who got pissed off have been shot down

my dead-key was refering to the fact that eventualy i will learn more about linears and have the power that those who DO do dead keys often have. it was a JOKE and making a point that while i may be a newbie now i wont ALWAYS be a newbie.

i mean..come on. when did the world come so adverse to jokes? out of ANYONE i would think that cbers would be the most open to jokes as well as the most forgiving about jokes that they didnt find funny.

learn to try and take things lighthearted if they are meant light hearted

i didnt come onto this newsgroup to insult anyone or piss anyone off, nor did i come on to be insulted or accused of things i DON'T do.

lighten up people.

I am just looking to the pro's and con's of use a tube box in the mobile. I am thinking of going this route and was hoping you guys that have been there and done that (or are doing that) will give me some pointers. By the way if I go tube I will probably won't go smaller than a 3cx 3000a7 . Thanks for any and all input.

check the voltage regulator chip. Most of the time it is a IC Chip that is no good. Same thing happens when a power supply gets hit by lightning. If it is the voltage regulator, it will show AC current instead of DC current.

re: Siltronix 1011 tranceiver web page

OK gang,

I've rounded up some additional pictures and goodies for the Siltronix web page on the http://sonic.ucdavis.edu server.

People sent in some great stuff to look at, not to mention what I've been lifting off Ebay picture wise.

The best news yet... I've added a down load icon on the main amateur radio page for a zip file of the owner/service manual (which includes the circuit digram).

cheers

skipp@pilot.ucdavis.edu

http://sonic.ucdavis.edu

...also contains free programs, drivers and other great software.

http://pilot.ucdavis.edu

...contains kewet electric cars, trs 80 computer stuff and more.

Source record: 59409

I have a 200 watt base box "solid state" with 2 mrf455s. i hooked it up and keyed it down and it was doing 300 watts. BUT if i left it keyed for more than 10 sec it would start smoking, When i got the box the wire inside the transformer thingy was burnt, so i replaced it with a wire the same size and length and tried it again. MORE SMOKE!! so i broke out my ole trusty radio shack pocket multimeter and checked the voltage off of the power supply. It was at 23 volts!!!! So i bypassed the power supply and ran it off of my 25 amp trip lite supply. Now it is at 13.8 volts and is working fine"but not near the wattage of coarse" So my question is what will go wrong and make the power supply do this? There is not much to the power supply just a big transformer that looks like a donut and 2 wires running to two little things mounted to the back of the box that are about the sze of a penny and thats it. What the hell is wrong with this thing is it the transformer or what????? thanx for the help! 223 swamps

dude i was just asking about how to do the wiring. I didn't know i'd piss u
off so much. I'm trying to confirm that install rr came up with involved no
drilling.

Every radio's different. Post your radio type, maybe somone can post how to do it. Cost for the mod is usually just some wire and a switch, maybe a resistor.

-Tinker

Assuming you dont have a regulator
Sounds like you shorted a winding on the primary of the power transformer
Instead of 10 to 1
You have like 5 to 1
Sometimes you can salvage a transformer it has winding options for 220 with
slight loss of duty cycle

Or you have plugged in to 220 somehow

check for AC after the bridge. On a scope you should only see lumpy DC
after the bridge. Then check your voltage before and after the regulator.
If it is the same on the input and output then the regulator is more than
likely shorted and will need to be replaced.

Start with a brand name. Is it smoking from the round transformer? Take a voltage reading while modulating, it sounds to me like it is an unregulated power supply and it will drop in volts when you modulate.

Which tubes on the market would work well to drive a single 8877?
For example: would a single 6LQ6 tube work? The amp manufacturer states 75w RMS, will power it to full output.(1500w RMS) I was told NOT to use a "sweep" tube to drive this box.. How about a pair of 3cx250's (I've never run across a box with just one). would that be too much?? I want the 8877 to last as long as I can, but I still want to be able to get out, also. (if that makes any sense). Please help!! I am new to this type of setup, and to be honest I'm kind of lost...
Please recommend a tube driver configuration for the 8877 for me. Thanks in advance.

Maniac.....

Roger that - I used to work lots of US hams, especially on twenty where I had a looooong yagi. What pisses me off in some of the ILLEGAL CB is the fact that they respect no rules. Without rules of some sort we're no longer talking about radio as a hobby but as a means of doing anything they like. With this I leave this string of - ahh ... thoughts. And see, everyone knows who I am because of the callsign, no need to use funny CB callsigns and to be afraid of the doorbell ringing when you work. 73 to you, to the rest of the other type of CB - I won't say. Gary AKA Kari in real life

BTW, Tim, I took a look at your web page as well. A-20-year-old kid with a modified amateur radio rig, living somewhere in Texas. First, I understand why you are using such a funny "callsign" - I don't think you'd be too happy about a couple of FCC officials pounding your front door while you "work" on your "rig". Second, an illegal CBer would never understand anything about any principles of radio communication. You're just like the south European and Arabic junk yard stations who ruin one of the best ham bands, ten meters here on the other side of the globe (which "channel" would that be to you, kiddo?). You deserve a kick in the butt from the FCC, that's for sure.
A LEGAL CB station in Texas would be quite another thing, we have nice CB stations here in Finland, too, and they sometimes visit my station and I let them work as second operators (fully legal here, too). Keep on dreaming about a "radio hobby".
Rest in piss, CB man.
Gary

I think you may have miss read my post, or I was not clear enough on the point I guess. I was refering to modifing a "2m" rig to run on MURS. Most Ham 2m rigs will do around 50 watts, much more than the 2 watts the FCC is going to permit on the unlicensed MURS channels.

> For that matter..... What do YOU suppose keeps "THEM" from showing up on
2m
> NOW??

There is already some unlicensed operation on 2m now. Since the FCC is going to allow voice and data modes on the new MURS channels, which don't mix very well, people are going to look for "clear" frequencies. The max power allowed is only going to be 2 watts, a typical 2m Ham rig runs 50 watts, and can be easily modified for out of band use. Since the CBer's have shown a total disregard for sticking to legal frequencies, and power levels, I fully expect to see the same crap happen on MURS. The CBers are already using modified Ham HF rigs for more power, out of band operation, and showing up on the bottom end of the Ham 10m band now. So what makes you think it won't happen on 2m VHF? I think the record speaks for itself, if a CBer thinks he can get away with it, he's going to try and the rules be damned.

You know, Gary, I wasn't even going to respond to your Finnish mindless drivel, BUT, I know many cbers that will run rings around your "knowledge" of radio communication. Hell, some of these cbers INVENTED technology that you wouldn't even begin to comprehend. Finland, huh? We need another small country to decimate when the economy sours, maybe Finland would be a good target! Think I'll email my congressman and tell him I feel they should investigate the iniquity underworld of the severely challenged Finnish.

I doubt they will even have to do that, they may work just fine. Plus there are "business" band VHF amplifiers in junk boxes at most Hamfests I have been to, which would work also with no modifications. I can see it now, Mirage will be doing a booming business selling their B-5030 amplifiers.

Making the power is no problem, and it is the way to go if your are looking to do big watts. However it is very expensive and requires more than just buying the box, like you will need a 240 amp ac alternator, 14 volts for the filament side... DO your homework before you make a purchase, everyone will try and tell you that their tech makes the best one and makes the big power, ask around check the pros and cons of each one-first before you buy. the price range of a 1-3000 will be anything from 3,000.00 and up depending on how hard you want to push it. I prefer the Gold box but that is my opinion, check around, go to some breaks first and ask the fellows that run them. Peewee

"> Well the first thing their going to want to know is how to "mod" a 50 watt
> 2m rig to run on the MURS frequencies for more power and range. The next
> thing is how to keep them from showing up on 2m.

This is absolutely incorrect and a totally benign statement. We are currently running MURS on the digital modes (including full packet) in my area along with FM MURS and the biggest problem we've had so far are hams using MARS modified radios attempting to communicate with our beacon station. These so-called licensed hams have been using their callsigns in their packet station ID (obviously a so called attempt to impress regular non licensed MURS users). No one is going to tell me that these hams ran out to purchase Vertex MURS equipment solely to use on the MURS frequencies, which tells me that they are using MURS *un-type* accepted equipment.

Anyone who knows anything about radios clearly knows that there is absolutely no advantage for extreme output power use on FM or on the digital modes because "line of sight" VHF and UHF has no skip-land to skip to.

CB'ers Look...for sale on eBay http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=499499650&r=0&t=0&showTutorial=0&ed=974863907&indexURL=0&rd=1

A Galaxy III Deluxe Digital Frequency Counter Model FC390. This counter directly connects to the Cobra CB Radio 148GTL and Ranger Amateur Radio SS-3900. It will also work with other CB radios with 10.695Mhz/7.800Mhz offsets. It's in excellent shape and appears to work (numbers light up). It measures from 1-40Mhz on 8-13v.
All eBay terms and conditions apply. Minimal priority mail shipping. If you have 50 or more positive feedback with no negative you can send a check and I'll treat it like a money order.

Sent via Deja.com http://www.deja.com/

First of all you don't know for a fact if these are "Licensed Hams" or not.
Why you ask? OK, I'll tell you, TNC's can have a battery backed up CMOS
memory which can hold various configuation settings INCLUDING the station's
call sign. So if somebody went out and got a used TNC, at a Ham radio swap
meet for example, and forgot to change (or erase) the last owners call sign,
then of course it will show up in the packets. Finally you do need a call
sign of some sort so the packet network can route the packets, and for
connecting one station to another. A ham call sign works just as well as
lets say "roadkill-10" on packet

> No one is going to tell me that these hams ran out
> to purchase Vertex MURS equipment solely to use on the MURS frequencies,
> which tells me that they are using MURS *un-type* accepted equipment.

Since you can't see the equipment that's being used, they may have done just
what you claim they did not do, buy MURS type accepted equipment.

> Anyone who knows anything about radios clearly knows that there is

BS, I can tell you don't! A fellow Ham just across the river in Canada (I'm
in Detroit) had a QSO with another station in Missouri the other day on 2m
SSB. He runs some power in to two stacked 13B2's. I know it for a fact
because I was on frequency with the station in Canada, and heard it for
myself. My brother has had many contacts passed "line-of-sight" on 2m SSB
too using an 8 element quad and 200 watts from a peaked up Mirage brick
amplifier. Then one night I was talking with my brother, on our favorite 2m
FM repeater, when another station checked in with full quieting, it turns

out he was from the Buffalo New York area. He heard us talking, and wanted to know where the machine was located. We talked with him for about 10 minutes, through the repeater, until the signal faded out. Yes you get DX on 2m, maybe not as often as on HF or as far most times, but it most definitely does happen, and beyond line-of-sight too.

Truly Free And Fun - Try It

First please don't slam me for this off-subject post. I thought perhaps some would enjoy a little humor.

This is great, it isn't a scam or anything like it. It is a real business with a real toll free number - really no tricks. And I am not in any way connected with the business.

Anyway if you want a few seconds of fun pick up your telephone and dial the following toll free number:

1-800-888-3999

When the recorded options start wait for option #7 - then of course push the #7 button on your phone. - And don't ask me, I have no information but it is kinda cute.

Ahhhhh! The proverbial challenge. Ok. Ya' wanna get picky....just 'cause you say "things we didn't need", does not change the fact. Since you readily admit and omit certain achievements..let's mention the Antenna systems. Many are built by cbers and are a great deal better than what you can purchase. You don't like that comparison? CB innovators have long come up with inventive and ingenious ways that A/C and D/C rigs are mounted, routed, installed, customized, hybridized, and when ya' can't buy it, improvise. Tools, spacers, cable housing, etc., etc., etc. Local guy here in the 'pile was awarded a patent for a universal mic tester. The thing has interchangeable male and female plugs and ends and is capable of providing adjustable power to a certain extent. All housed in a slick cabinet with a bunch of plugs. It will also make just about any radio compatible with virtually any mic. Not in any way saying hammies are not capable of the above when I know for a fact many are. I can find more, those are just off the top of my twisted head. Ya' want more? Do the research yourself. Didn't know you were Finnish, Richard. Or unworthy. Thanks for the edification. That was all I had to say and, it's allllllllllright!

<< let's mention the Antenna systems. Many are built by cbers and are a great deal better than what you can purchase. >>

Duh. They are base loaded designs that have been around for years. Only innovation is the big copper tubing to make them look like they'll handle 50KW. LOL.

<<You don't like that comparison? CB
> innovators have long come up with inventive and ingenious ways that A/C
> and D/C rigs are mounted>>

Innovative mounting? In the trunk? Under the seat? To hide from FCC? Whoo eee.

<<, routed, installed,>>

Make the amp look like a toolbox so you don't "git busted"? Yah thats real innovation.

<<<customized, hybridized, >>

Hybridized? You guys invented tube/transistor hybrids? You're about 30 years late.

<<and when ya' can't buy it, improvise. Tools, spacers, cable housing, etc.,>>

You cram industrial generators under the hoods of trucks and use fat wiring. Big deal.

<<> etc., etc. Local guy here in the 'pile was awarded a patent for a

> extent. All housed in a slick cabinet with a bunch of plugs. It will
> also make just about any radio compatible with virtually any mic. >>

Duh. Every electronics mag going back to 1958 published plans for that kind of adapter box. Your guys "innovations" are either common smugglers tricks to hide illegal stuff or technology that's 30 years too late.

All the pre amp does is boost the incoming signal but since it boosts the
background noise also its usually not worth it...Low -med-high will only change
the deadkey but the amp should still swing the same..I`d go with low

Excuse me but do you know anything at all about MURS Packet? Have you
personally ever seen a MURS packet station in operation? I think not!
Because if you have you'd know that mostly all of the equipment being used
right now on MURS is VERTEX TCP/IP protocol which is clearly not NOT AX.25.
Old TNC's havent even come close to being used on on MURS by non-licensed
individuals because the KISS conversions are too complicated for them. Why
dont you post a copy of some of your local MURS traffic text along with your
next post. Id love to see the basis of you argument.

>Finally you do need a call
> sign of some sort so the packet network can route the packets, and for

Lets just say you're wrong again. You obviously no nothing about TCP/IP
radio transmission protocol because if you did you would know that it is the
firmware selcal number that controls station identification, NOT the
callsign.

Sure, Tropo ducting happens every day......NOT. Sure, Meteor showers happen every day......NOT.
How long have you been playing with VHF radios anyway? Long distance VHF propagation is responsible for about 3% of all VHF traffic (This is according to the ARRL Handbook). Apparently you live in the Bermuda Triangle where all physical and statistical science is thrown right out the window.

Bottom line: If you going to post stupid statements about something you know nothing about, dont bother because in the end you end up looking like a fool.....Kinda like right now.

Yeah its the switching power supply in your high quality poorly shielded power amplifier. basically it is creating AC to it can step up the voltages for the audio final transistor stage. This AC is damn near squarewave and the harmonics are just terrible with squarewave. The cure? Turn off the stereo when talking on the CB if you don't want to here it or try a different power amp for the stereo.

"Steve Hanis" <wxfreak@hotmail.com> wrote in message news:6A8R5.424$7.155652@typhoon.kc.rr.com...
Dave,
You need CB and Stereo equipment made in China to avoid this problem.

Most HF rigs now are rated around 100-200 watts so driving it shouldn't be an issue other than adjusting your RF Power. That is if you are driving it with an HF radio. Now if you are driving it with a CB radio then this whole statement about a little CLEANER really gets me laughing.

Not many folks "hide" things these days Mcgillicuddy.....stick around, you'll see what I'm talking about. Damn! Another one who fails to give credit where it's due...like I said..check out the meets and the breaks..plenty has changed since the seventies. And I wasn't referring to your adapter box, if you knew anything about how a patent is awarded, you wouldn't have embarrassed yourself, you would have done the research. The examples you cited are just those..examples..like I said...SOME will never comprehend due to their closed, one tracked minds.

It's called a franchise store and they are allowed to sell other products
besides just RadioShack branded items. The "other" items can be found
anywhere else. There are tons of online stores that would beat any
radioshack's prices by a longshot.

Cheap but unreliable Customer service:
www.copper.com
www.hyelectronics.com

Or better customer service:
www.bills2way.com

These are just places I have dealt without any problems. The first 2 I had
problems with but the screwups were usually in my favor.

You did not specifiy what terminal equipment was being used until now so I
was free to select the protocol I am most familar with, and based my last
response on that.

> Lets just say you're wrong again. You obviously no nothing about TCP/IP
> radio transmission protocol because if you did you would know that it is
the
> firmware selcal number that controls station identification, NOT the
> callsign.

You again did not specifiy the protocol used until now.

> Sure Leland. How MURS only radios do you own? Youve gone out and spent
$350
> on a MURS frequency only radio right?

Hams do it all the time for a dedicated 2m packet rig. So why do you find it
so strange? A Ham friend of mine just spent $350 on another V/UHF radio,
just because he liked it, and not because he needs one. He has 6 to 7 radios
already. Many Hams have more than one radio they use. For example you can't
use your VHF rig to talk on if its running packet full time, so you get
another radio, simple. Plus you seem to have over looked the option of
buying used equipment. No need to pay full ticket prices when you can buy
the radio you need used at a good price, and there are a LOT of used radios
out there.

> Are you even listening to yourself?

Have you listened to yourself? You seem to be upset that somebody uses his
Ham call on MURS packet, then make the totally non-supportable conclusion
that they MUST be using "un-type-accepted" equipment. I don't see the
logical connection. I could use my Ham call on 11 for example, but it does
not directly follow, logically, that I MUST be using a modified
non-type-accepted Ham HF rig. I could just as easily have been using a
stock, perfectly legal, CB radio. You can just about identify yourself any
way you chose, on 11m, from my reading of the rules.

> > > Anyone who knows anything about radios clearly knows that there is
> > > absolutely no advantage for extreme output power use on FM or on the
> > digital
> > > modes because "line of sight" VHF and UHF has no skip-land to skip to.

I posted my response about my personal experience that says otherwise. If you don't believe it, that's your problem.

> Sure, Tropo ducting happens every day......NOT. Sure, Meteor showers happen
> every day......NOT.

I guess you didn't read your own post. The statement was ....

""line of sight" VHF and UHF has no skip-land to skip to."

which is totaly incorrect. The above statement is what I responded to.

> How long have you been playing with VHF radios anyway?

2 years this go around.

> Long distance VHF propagation is responsible for about 3% of all VHF traffic (This is
> according to the ARRL Handbook).

I know the figures, but this had nothing to do with your dumb statement above concerning no V/UHF skip.

>Apparently you live in the Bermuda Triangle

Nope, I live in the Detriot area, just look me up on QRZ.

> where all physical and statistical science is thrown right out the window.

and apparently your short term memory too. ;-))

> Bottom line:

Bottom line is, if you what to comment about something, at least try to remember what you wrote last time around.

You mean you jump into a conversation with blatant rhetoric without even knowing the specifics of what is being talked about? If you knew what you were implying, you should have known the protocol. What you're doing now is called back-peddling.

> > Sure Leland. How MURS only radios do you own? Youve gone out and spent

>

Sure I know lots of hams that spend hundreds of dollars on CB equipment dont you? I dont think so. Lets remember your original comments here; Snipped from you posting;

:"Well the first thing their going to want to know is how to "mod" a 50 watt 2m rig to run on the MURS frequencies for more power and range. The next thing is how to keep them from showing up on 2m."

Suddenly, when I post exactly the opposite of your statements, and whats *actually* going on, you go off on some unsupported defensive rant. Its clearly apparent that you've never even been on CB MURs yet your compelled that every non-licensed person on the band wants to somehow emulate Hams by using Ham equipment which couldnt be further from the *actual* truth. Guess what? The reason why MURS now exists is to circumvent the ham license

process altogether by giving real people the use of the 2 meter VHF airwaves which hams have hogged to themselves for the past 50 years. CBers can now enjoy every mode on 2 meters that you had to get get you Tech license to have.....felling a little pissed Leland? It sure sound like it to me.

> > Are you even listening to yourself?

> way you chose, on 11m, from my reading of the rules.

Im not upset about it at all. I know very well that Hams are using non type accepted equipment on MURS frequencies and on 11 meters. What bothers you is when the reverse happens. Let me guess, Hams that arent MARS certified can open up their radios yet CBers arent allowed to open up a Ham radio to 11 meters or MURs freq's? I dont think so. The pendulum swing both ways. The Part 97 fines for a Ham having a tranceiver that been opened up is far greater than that of a CBer using a non-type accepted radio. Every ham you know with an open radio has a MARS certificate right?.....

>

I hate to break your heart Leland but the is NO SUCH THING AS VHF SKIP. Skip is ionospheric propagation not tropospheric propagation. There is a huge difference between the two. Hence:"line of sight" VHF and UHF has no skip-land to skip to." Because there is no such thing..... Meteor and satellite VHF propagation is nothing more than EME of sorts which still

clearly ISNT skip.

You'd better hit the books again or at the very least upgrade your license, because if you do, you'll learn this stuff.

Over and out.

> I think you may have miss read my post.... I was refering to modifing a
"2m"
> rig to run on MURS

....looks like I DID miss something... but I STILL can't imagine someone spending the time or the effort to modify a 2m rig for MURS.... why bother when there's all them 'unused' frequencies in the 2m band :-) and plenty of repeaters to use too!
...Don't know if you're in the Motor city area, but we've got lots of 'underutilized' 2m repeaters in and around the metro area... many don't do much more than ID most of the day. 440 is even more desolate.

....I'm quite aware of the unlicensed 10m operation, but if indeed, as you say, most of these interlopers are running ham rigs, why do you suppose they don't show up in greater numbers on the other ham bands... all they'd need is a cheap wire antenna.

....I guess my point was that I felt your concerns went a bit overboard.... If it weren't for stricter enforcement and self-policing on the ham bands, we'd have been overrun by bootleggers years ago. We get the occassional bootlegger here on VHF, but they don't stick around long for a variety of reasons.

Well just to let you know I am already set up with a 5 pilll driving a 16 pill so drive is not a broblem. I was told by one of the manufactures that a 3CX300A7 will run off of one alt. and put out 10,000 watts with a 8 pill driver. That my freinds is why I want to go tube. I was quoted $4700.00 for the box. I would take at least 6 alt's and 10+ batterys to run a DC box at that level. I will use my DC set up for driving around when I have a problem or want to bump down with the big doggs I will drive up the hill and do my thing!

Thanks for the replys. I checked out a couple of brands and I got a price quote of $4700.00 He said that it would only take one altanator and that It would require a 8 pill driver. Not a problem I build Dc boxes. What else do I need to have besides the box and the altanater? Does the box come with the Tranformers? Or is that all extra? How big do I have to go on the alt? Just want to thank all the people that replied that were helpfull again!

Looking for a Manual and service info on a Demco Super Satellite setup.
I am trying to restore the following mid 70's vintage CB setup to original
operating condition for a collection.

I need info on the following pieces:

CB Transmitter
Receiver
Speaker with modulator
stand-alone modulator
CAP (Business Band ?) Transmitter
25 - 30 MC Amplifier (Pre Mhz)
Wavalyzer

This is the Super Satellite, not the satellite.

Any pointers to Demco collector sites appreciated.

TIA,

David

I was there when a contact was made from eastern PA to CT. First it was done on 6 meters, and about an hour later, on 2 meters to the same station. It was done with a barefoot IC-706MKIII and four element quads on a mountaintop. The day was a VHF/UHF ham contest about 3 months ago. I set up on 11 meters and talked all over with a 1/4 wave ground plane and a barefoot 2950.

Besides normal F-layer skip, VHF/UHF signals can propagate in several different ways. Go to the library and check out some ham books to enlighten yourself. (I'm still not a ham!!!)

White - audio
Shield - audio ground
Blue - switch common
Black - receive
Red - Transmit
Yellow - grounded during transmit to black. Good for keying an amp.

Most radios require that the blue and shield be connected together.

If you can run across a Yaesu Ft 101ZD or 901ZD or 902Dm with AM, they would be excellent. They have great receive, can key at 1 watt easily and do about 60-80 with no strain. Have 2 great audio tubes, 6146's and they sound awesome with a D104 silver eagle driving the audio. You can eaven raise the lid, and set the drive control to exactly what you want it to be.

There is an amp called Tennesee Walker with a single 4cx150b tube, run it on low with about a 10w carrier output and 150 pep and that should light up the 3cx1500 fine. Actually, a single 3-500z box with just the radio driving it may get the drive you need (10w-150w)

The only drilling would be how you mount the radio. Some guys don't like screwing the bracket into the dash, so I recommended the pedestal mount (like cell phones are mounted) which would require a few screws to mount the pedestal on your hump. As far as the antenna, Wilson makes a magnetic antenna model 5000 that will just stick to your roof, then run your coax in the cab through a grommet hole in the rear floor of your truck.

The problem with jokes is that some don't get them. Mark Twain in his Nevada newspapering days sent up the local officialdom twice, once involving the discovery of a petrified man over which the locals hold an inquest, etc. If you actually read the story, the stone man is sitting upright with left thumb to nose hand open and right hand to left. He was getting letters for years asking for more information.

There is always someone who don't get the word.

Sort of CD, as your volts go up your watts go up and your amps go up some.
They are not inversely proportional, it just doesn't draw AS much amps when
volts go up.

5744. Beam Antenna

Newsgroup: rec.radio.cb
Date: 2000-11-18 00:00:00 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3A165E47.1B3D61DF@qnet.com>
Source record: 59659

Hello Allen: Your e-maill address does not work.

The antenna can be repaired, you don't need all the fancy brackets. Just a piece of .125" thick aluminum sheet metal, that the refelector and the boom can be U-bolted to.

The driven elements are mounted in a insulated sleeve that is held together and attached to the boom, with a little bit larger bracket. The driven element is purposly made shorter, to allow the Hair-Pin or Beta Match System to work. Yes the tuning wire can be replaced with a lerger diameter aluminum rod or tubing. But you will need to retune the antenna with a SWR meter or antenna analyzer.

Jay in the Great Mojave Desert.

> If you are claiming there is no skip on FM, you are dead wrong.

Indeed. If you call skip a DX via the ionosphere - this can happen
up to 150MHz and slightly higher. The "bounce" off the sky means that
there is a zone "skipped" in between the normal range and the distant
reception. SSB or FM mode is irrelevant.

Most 144/430 MHz stuff that is longer than usual range is via
tropo though - lower atmoshere - no skipped zone.

5752. Does antenna tuning make that big a difference?

Newsgroup: rec.radio.cb
Date: 2000-11-18 00:00:00 UTC
From: John Distai <johndistai@vt.edu>
Message-ID: <8v6770$800$1@solaris.cc.vt.edu>
Source record: 59667

Hi.

I have a non-modified Uniden 78 CB, with a Wilson Little Wil antenna.
I am receiving SWR readings of about 1.25 on channel 1 and just under 2 on channel 40.
If I start cutting the antenna (the way to tune the Little Wil in this situation), will it really make a difference in reception and transmission distance?

Thanks!

No. Any difference will be measured in feet and not a whole lot of them.

Hello John: No you will not see leaps and bounds of improvement. A good analogy is a Nat's fart in a wind storm type comparison.

That's pretty good SWR for a short antenna. I'd leave it right there.

Antenna tuning can turn into a real jar of worms fast. Cutting the antenna may not make things better, but may worsen the SWR.

I have fond memories of a guy that made his own 5 element beam antenna. The construction was simple, but the tuning was a nightmare. So before I could get there to help the guy out, the beam antenna was levelled to very flat assembly of aluminum tubing in his driveway, after he had run over the antenna with his truck. Many a ham and CB'er type ah guy has pulled his hair out trying to tune an antenna. I have seen PhD's in Electromagnetics throw a screw driver across the room, yelling "You guys figure this damn thing out, I am outah here"

The amount of drive required will depend on the configuration. The big rule for long tube life is DO NOT DRAW ANY GRID CURRENT. The tube as originally designed could draw miniscule grid current. The newer versions can draw a bit more, but draw appreciable grid current and go buy another tube. In real terms this says in grounded grid configuration do not exceed 75 watts input.

5756. Re: Does antenna tuning make that big a difference?

Newsgroup: rec.radio.cb
Date: 2000-11-18 00:00:00 UTC
From: Gary Danaher <gdanaher@home.com>
Message-ID: <3A16ADC2.6ACC4A67@home.com>
Source record: 59671

The other comments are substantially correct, and I wouldn't argue. Any swr under 2:1 will not substantially affect the transmitted signal strength. If you lean in the direction of perfection, you want the most commonly used frequency to be the point of resonance of the antenna. Ideally, you have access to an antenna analyzer which would tell you exactly where that point is. It sounds from your information that the antenna is slightly long for the application, so it is possible to trim a bit, say 1/4 inch and see what difference it might make. Check the swr in a fairly open space, away from any other metal objects. If the car door is normally closed when you operate, make sure it is closed when you check the swr. Yes, it makes a difference. If by trimming a slight portion, the swr goes down on Channel 40 and also down on Channel 1, then it can stand a bit more, to the point that channel one begins to rise. What you are looking for is a low point somewhere between one and forty.

5757. linear problem -need help

Newsgroup: rec.radio.cb
Date: 2000-11-18 00:00:00 UTC
From: Ken <klajr2@swbell.net>
Message-ID: <jeyR5.75$ud3.5584@nnrp3.sbc.net>
Source record: 59672

I accidentally ran the variable power on my Galaxy 99 at 10w for quite awhile using my 2 pill linear. Now it (the linear) powers on and kicks in the relay, but no output other than what I drive into it.
Needless to say the box got really warm and I ceased operation immediatly.
I opened the cover and found two resistors each of which goes from one pill post to the board, and the other as well.
One resistor appeared to have the paint burned off so I replaced both resistors with Rshack 22 ohm resistors which the guy told me would work although the ones I took out were 20 ohms according to his converting the band code value of the one that was'nt burnt.
The linear still has the same problem.......any ideas?
Thanks for any help,
Ken

Ken I would remove the 22 ohm and put a 10 ohm 1/2 watt resistor in there 22 ohms is much to high a value. and if the base resistor burnt you also have blown the Transistor "pills" replace them and you will be ok /

yes sir mr ice cold, i have learned a thing or two no doubt about it.
i just wish some of the teachers were still on here to make it more
interesting. some of the best teachers that mr smith needs to start
hanging around are probably up north, probably new jersey, chicago,
detroit, etc. i don't know where he lives but he needs to get around
some folks that are doing this on a regular basis and acquire some on
the job learning. i would suppose. he is about to open up the
proverbial can of worms switching to ac. it aint going to happen
overnight either. he will be lucky if he is talking by the end of next
summer with that ac system. i just hope he knows what he is doing. i
ought to know, believe me. it is just like hillbilly said. he better
have deep pockets. with a long nose , it aint just a car, its a way of

life,......cd is out.............

by the way mr smith, may i also say that i forgot a very important item on your list. uh sir you need to go have a heavy duty balanced and blueprinted engine put in your vehicle. make sure the rebuilder installs a steel crankshaft and use a 4 bolt main engine block also. if you use a small block, get it pumped up to about 300 brake horsepower. that should do it. but it would be better to use a big block. now then lets see, back to our discussion of ohm's law,.....cd is out.....

yeh , that is a good statement to make but you have to say that the
internet has most definitely improved dave's business, wouldn't you
say, and others also i would assume. to make a blanket statement that
the only reason he is back logged is because he is that damn good, well
it could be that he takes his sweet time turning out his products, oh
well. there are other builders that build things much faster, and it
isn't indicative of a lack of quality mr wild bill, come on, come on.

by the way when is that ancient 'big poppa pump' going to retire? i
have been seeing him and his brother since the mid eighties and he
still looks good and is in prime condition and still going strong. it
is amazing what those injections into the quads can accomplish isn't
it?,.......cd is out...

of
> repeaters to use too!

It would piss off a lot of Hams, and I am sure some will try when they want
a "clear" channel to talk on free of the local idiots that are sure to
populate the MURS license free channels. Its bad enough that CBers are
showing up on
10m now. Hams would not care much what the CBers do except when it affects
us such as the amplifier issue, splatter, intrusion in to our bands, and
getting blamed for EMI coming from overpowered CB stations. We have enough
fun trying to keep our neighbors off our case, but we don't need CBers
adding to the problem. Plus the fact the potty mouths on 11m, and there are
oh so many compared to the Ham bands, that people hear them on the scanner,
over their TV's etc, gives BOTH services a black eye. The general public
can't tell the difference between a Ham antenna or a CB antenna, we get
lumped together. So when a Ham wants to put up a tower the locals oppose it
because some of them have had to put up with CBers getting in to their home
electronics, and not giving a damn about it.

> ...Don't know if you're in the Motor city area,

I am, Madison Heights area on the north side.

> but we've got lots of
> 'underutilized' 2m repeaters in and around the metro area... many don't do
> much more than ID most of the day.

True. You may catch me on the Southfield machine (146.820 MHz PL-131.8 Hz)
from time to time, or on 6m and 2m sideband. I have only talked with two
other stations on 70cm sideband so far, seem like nobody is out there.

> 440 is even more desolate.

Tell me about it. By the way the 444.000 MHz machine (PL 100 Hz) is back up and operating. I spent some hours fixing the power supply for the system, a rather over designed regulated switcher weighting in at around 50 pounds. I spent last Thursday night at the repeater site with KE8HR (Wallace Murray), the repeater control operator, till 10 PM installing the power supply assembly, while Wally got the rest of the system checked out and going. Its really sad, but Wally told me he did not get anyone to volunteer to help, except me. I used the machine a lot before it went down so I figured I can at least help fix the thing, and I'm not even a member of their radio club!

> ....I'm quite aware of the unlicensed 10m operation, but if indeed, as you
> say, most of these interlopers are running ham rigs, why do you suppose they
> don't show up in greater numbers on the other ham bands... all they'd need
> is a cheap wire antenna.

I think they have, and the good ones are hard to catch. I have heard of CBers bootlegging on other HF bands. Its getting harder, for the bootleggers, because if they end up talking to a Ham they are going to be asked for a call sign. I know a lot of Hams have their computer up and running with a CD from the QRZ or Buckmaster database loaded, and have found out the station they were talking to was bogus. Wrong name used, wrong address, expired license etc. I even had one CBer tell me face to face he wants to get his Ham ticket so he does not have to bootleg any more.

> ....I guess my point was that I felt your concerns went a bit overboard....
> If it weren't for stricter enforcement and self-policing on the ham bands,
> we'd have been overrun by bootleggers years ago. We get the occassional
> bootlegger here on VHF, but they don't stick around long for a variety of
> reasons.

They don't hang around because on V/UHF the station is in general "local", so the FOX hunting guys get something to do that is useful. But that only works when you have just a few bootleggers, now multiply that by a few thousand the self enforcement breaks down because there are not enough Hams to hunt these idiots down. By the time you shut down one station another 2 or 3 pops up. I have dropped in on the FRS news group (alt.radio.family) every once in a while, and see the same things starting to happen there that has happened on 11m already, radio mod's etc. I even remember some kid asked on the VHF-UHF news group, a while back, where to get an amplifier for his FRS radio so he could talk with his good buddy across town!

>if you want max performance.
>

Thanks for the input Bill. When the freq.mod (just some button pushing on power-up, right?) is done, are the extra bands all-inclusive, or are there some freq. gaps? I like to monitor some radio clubs on their 'home channels" in the 27.800 range and if there's a gap there I'd want to know about it before buying one! :-)
Thanks for your help-
Linus

men take female steroids and men take male steroids, that is why a
woman will start getting facial hair to go along with those muscles.
yep i remeber paul bosch. he used to get on the radio and talk about
wrestling. he was a very interesting man actually. had some very
interesting tales to tell about his days in france during world war 2,
and the hell those americans went through chasing the germans back
home. he was also a poet believe it or not. he had a big write up in
the paper some years before he passed away. i still got it around here
somewhere. yep, those were the days. i was one of those people who
watched it but would not talk about it to anyone. well the women can
have their soaps. just give me my beer and wrestling. matter of fact i
think paul lived in tanglewild, because i used to see him every once in
a while over at oshmans on post oak. he always wore this gaudy jewelry,
whatever. and buddy his ears looked like he definitely had been put in
one too many head locks in his forty some odd years of wrestling. i
remember the last time he wrestled as a matter of fact. he was always
getting into a situation with a guy named hart,(the original hart i
might add). so he wrestled him and won. it was funny to see those two
old guys out there pretending to beat each other up. oh well. rest in

peace paul. you earned it. now back to napster and andrea bocelli,...cd
is out.....

shoot you can't get him to hit a lick, i think he has a 24 pill for
sale for $1,400.00 but other than that, he lives on his social security
and doesn't do nada. i think he quit about 4 years a go or so. heck
did you know he used to be a tube man , then a black dude taught him
how to do dc boxes , so he switched over to that. in his heyday, he had
people ordering from all over. had his wife , daughter stuffing boards,
and a couple of guys (ham radio operators) helping him. i think he was
slowed when he got raided back in the mid ninties,.......cd is back
quiet......

> :"Well the first thing their going to want to know is how to "mod" a 50
> watt 2m rig to run on the MURS frequencies for more power and range. The
> next thing is how to keep them from showing up on 2m."

And sure enough that is what will happen. You let a bunch of people with the
attitude shown by many CBers who run illegal power, and out of band
operations, it will happen on the MURS bands. Even the people who use FRS
radios are messing with modifing the things. The record is clear, MURS will
sooner or later end up like 11m, and the Hams are going to have to put up
with the crap, and try to keep them off of yet another Ham Radio only band,
2m.

> Suddenly, when I post exactly the opposite of your statements, and whats
> *actually* going on, you go off on some unsupported defensive rant.

What was unsupported was your comment about Hams using modified Ham gear on
MURS, based ONLY on your observation that a Ham call sign was used as an ID.
You want to rant then come up with some solid evidence to prove your point,
such as a Ham getting busted for using his modified 2m rig on MURS.
Otherwise all you have is an ax to grind and no handle to swing it with.

> Its clearly apparent that you've never even been on CB MURs yet your
compelled
> that every non-licensed person on the band wants to somehow emulate Hams
by
> using Ham equipment which couldnt be further from the *actual* truth.

There are already too many CBers using modified Ham HF equipment on 11m. Now
we have the FRS service, and its well know that many Ham HT's can be "opened
up" to operate on those bands. So can Ham 2m rigs be modified to operate on
MURS. It just a plain matter of fact that ham gear can be modified for out
of the normal Ham Bands use. Thats why people end up using the things. You
can buy them used at local Hamfests cheap. The CBers no this news group seem

to like pointing out much of the equipment used out of band, and the amplifiers are old Ham equipment.

> Guess what? The reason why MURS now exists is to circumvent the ham license
> process altogether by giving real people the use of the 2 meter VHF airwaves

Its to give people who are not technicaly qualified to build - modify - experiment with high power radio equipment use of the VHF band.

> which hams have hogged to themselves for the past 50 years.

The license is available to anyone who can pass a simple 30+ question test. You mean you can't do that? We have kids 9 and 10 years old with extra class tickets.

> CBers can now
> enjoy every mode on 2 meters that you had to get get you Tech license to
> have.....

Nope, no fast scan TV, no satellite communications, no high speed microwave data links to name a few.

> felling a little pissed Leland?

Nope, I feel sorry for them, CBers. Some of them look like they would like to do more than they are getting away with on 11m, but can't because they don't have access to the spectrum nessessary.

> It sure sound like it to me.

You sound pissed however.

> Im not upset about it at all. I know very well that Hams are using non type
> accepted equipment on MURS frequencies

I'm still waiting for your "proof", and I don't see any yet. 8-))

> when the reverse happens. Let me guess, Hams that arent MARS certified can
> open up their radios

Yes we can, and Part 97 rules allows use to modify our radios. You can go and get your own copy of Part 97 and read the details for yourself. However what we can't do is use those modified radios to transmit on bands we are not licensed to use.

> yet CBers arent allowed to open up a Ham radio to 11
> meters or MURs freq's? I dont think so.

That's right, they can't. Go and get a copy of the Part 95 rules and read the relevant sections. CB, and FRS, radios are type accepted and CAN NOT be modified, period.

> The pendulum swing both ways. The
> Part 97 fines for a Ham having a tranceiver that been opened up is far
> greater than that of a CBer using a non-type accepted radio. Every ham you
> know with an open radio has a MARS certificate right?.............

You really are clueless about Part 97. Go read it. FCC does not care what the Ham rig is modified for, MARS or CAP, so long as it is not OPERATED there without the correct license in hand.

> I hate to break your heart Leland but the is NO SUCH THING AS VHF SKIP.

Duh!! Now I know for a fact you don't know what your talking about. There is in fact Sporadic E , Aurora, and FAI skip too. Since you like to quote the ARRL handbook go read section 21 pages 11 to 13 of the 1999 edition. It talks all about them and how to spot them on VHF. If you disagree with what you read there then take it up with the ARRL. They wrote it. 8-))

5805. Help with CB instructions

Newsgroup: rec.radio.cb
Date: 2000-11-18 00:00:00 UTC
From: John Distai <johndistai@vt.edu>
Message-ID: <8v71og$dn8$1@solaris.cc.vt.edu>
Source record: 59720

Hi.

I have a new Uniden 78LTW that I have some questions about. The radio came with instructions, but they are extremely poor. The instructions for some of the features are:

"Adjust RF Gain to optimize reception in strong signal areas" Huh? This is pretty worthless to someone who is new to this. I was wondering if someone could provide more explanation on the following controls:

NB/ANL
Dynamic Squelch Control
RF Gain
Mic Gain
Delta Tune

Also, this radio has a meter on it. While receiving, with the RF gain turned all the way up, the meter always reads on the edge of the green and red. Is this bad?
If I transmit and the meter goes into the red is that bad?
Also, what happens if I turn the SWF calibration knob after I've tuned the antenna? I've noticed if I do this the meter reads 3 or more. Was something changed, or is the meter just not calibrated any longer?

What kind of distance can you expect from a stock CB and a 38" magnetic mount antenna? Is signal distance also a function of terrain?

Thanks!

Noise Blanker / Automatic noise limiter - usefull in removing pulse noise
such as ignition noise while mobile.

> Dynamic Squelch Control
Allows you to set a level, all signals below that level will not come
through the radio. Essentially a useless control on a CB

> RF Gain
Allows you to reduce the gain of incoming signals. Useful when someone close
to you is overloading the radio so bad you can't understand them. Increased
gain pulls out weak signals if NO OTHER SIGNALS are present.
> Mic Gain
Allows the adjusment of mike gain to avoid over modulation. Normally run
wide open on CB.
> Delta Tune
On AM has little effect. On sideband allows the receive frequiency to be
varied around the channel frequiency to clarify sideband voice caused by
slight differences in frequiencys between radios.

Hope this helps!

Didn't the fellow say "accidentally left the variable power at 10w", that doesn't mean he ignorantly ran his radio wide open. Let's try responding to the questions with relevant answers rather than insults.

My God, Tim, I thought I was the old fart. These days, the W2 goes in the front.

We have reciprocal licensing but not reciprocal testing so I think that Mr. James will probably have to do it again. He will be pleased to know that US code exams are now at 5wpm, so what he did for the Canadian Advanced is far worse than the US exams; next to yours, the Extra is laughable anyway. So far as I know neither country would object to your having both so you could keep your call for when you go back to Quebec.

Suggest the ARRL website. Use my e-mail if questions. You also have one fewer letter in the alphabet, there is no US equivalent to di-di-di-dah-dit. Isn't that how you send VE???

Well since you asked, I think that we should be
very interested in this election. History is being
made right now. Never before in history has a candidate
asked a judge or a court to appoint him as the President,
but that is exactly what Gore is trying to do. He's trying
to steal the election. The media knows it and they are
willing accomplices. There are some journalists who
write editorials about this but it is not front page
in the paper or even talked about on the networks.
The only people talking about it are on Fox News.
Gore has repeatedly said that every vote should count,
but they are only counting in democratic counties. Today
they eliminated more than a thousand military votes because
they did not have a postmark. It wasn't the voters fault
that the Post Office didn't do their job. If they really
cared about every vote then they would have allowed those
to be counted. Every chad they find on the floor in those
rooms that they are counting in is a vote for Al Gore.
Al Gore is corrupt, the canvassing boards in those democratic
counties are corrupt, and I am afraid that the Florida
Supreme Court is also. This is very serious business. Al
Gore and his buddies in the ABC press have been contacting
the electors in the states that Bush won and trying to get
them to change their vote. I don't care how paranoid you are,
you are not paranoid enough. Our very culture and our form
of government is being threatened and most people think that
it is just partisan bickering. They need to wake up before
it's too late. It may already be too late.

I agree that this is history. There will probably be no other time when you will see the "real" demonrat party.

Take a look at this story about people putting together information to try to influence "faithless electors":

http://foxnews.com/election_night/111700/beckell_norvell.sml

Isn't something like this illegal? What I find funny is that people wouldn't stand for this in countries that just obtained their freedom. The people in those countries would drag the people who were trying to interfere with their democratic process into the street and stone them to death. Why should we stand for it in a country where we have had freedom for over 200 years?

This just makes me madder than hell. And if Goresky gets elected, they'll bastardize the 2nd Amendment so that we will just have to take more of this crap in the future....

I also wonder if the Clintong/Goresky/Carniville machine is doing background investigations to try to dig up dirt to further "influence" these electors, just like they tried on Paula Jones and others....

Tim, I don;t think that knowledge or study is the problem. Hams take umbrage to unlicensed people operating on a band that requires a license. At the same time the interlopers are saying they could pass the test. Belly up to the bar and do it! We will welcome you with open arms.

Better check the regs. An operator from England would sign W2/G3XXX but a
Canadian would sign VE2XXX/W2

Has to do with reciprocal operating privileges.

> > that!

Probably should expand a bit on what processing is, at least the analog variants. Comes in three flavors:

1. Peak limiting or clipping. The clipper will generate trash that needs filtering but in general you let the clipper keep you out of trouble and bellow.

2. Volume compression which most radios already have or did have when I gave a damn. This is a kind of AGC - automatic gain control - that causes lower level signals to be amplified more than higher level ones. Attack and decay times can be adjusted. Your minister probably has it on his mike so that he can wander and wave his arms without losing audibility. Tune the local rock station on FM and it is compressed out of its mind; the classical station will seem not to be as loud because anyone compressing Mozart will have the classical community on his lawn with torches, pitchforks, and a rope with a noose at the end.

Both of these systems depend on the human voice having about a 30-35 percent peak to average ratio on a good day so making it 50-60 percent electronically does add to the loud effect without overdoing the peaks.

3. Frequency fiddling. This has been in the recording industry since before I was born. On your amp, it may be called equalization (reversing the process - not the same as an equalizer that supposedly matches hardware and the room) and goes back to the days of wax recording. If you let the bass thru the grooves would be massive or the oxide in the tape would get saturated. Long and short, the audio is run against a predetermined curve for a purpose. Some frequencies are boosted, some cut.

As audio below about 300 hz contributes little, less, or nothing to intelligibility and takes a lot of power, these freqs are routinely and ruthlessly eliminated. Similarly, much above 3000 hz is pretty useless; presence is not an element in communication audio. Within that range, it is common to build a response curve peaking at the center of the female, yes

female, voice at about 1200 hz. It may be as simple as a cap in the mike line. Next time you have to deal with an op of the distaff persuasion in a pileup you will know why; you will also notice why a lot of outfits prefer female dispatchers. I am about half surprised no one has rediscovered the virtues of carbon mikes but that is a story for another day.

That is pretty much the story of processing. Digital is a bit more sophisticated but not a lot different in principle.

Somewhere along the line you will be introduced to some form of controlled-carrier transmission, more than likely in the form of a 'swing kit' that promises more and louder audio.
This is an ancient idea originally designed to lower a high power station's power bill and be kinder to expensive finals that reached its peak pre-WW2 and enjoyed some popularity in the early 60s. Of more recent years, it has shown up both in response to some of the problems inherent in AM with solid-state devices (truly an 'unnatural act') and to obtain the swingy audio that goes with echoes, roger beeps, and various imitations of an explosion in a scrapyard on key-up. Do yourself a favor and let that trolley go by.

From: "Scott (Unit 69)" <upplus@hotmail.com>
Message-ID: <3A1650E6.18887763@hotmail.com>
Source record: 59741

Q: What's the difference between oral sex and anal sex?
A: Oral sex makes your whole day, anal sex makes your hole weak.

Q: What do a gynecologist and a pizza delivery boy have in common?
A: They can both smell it but can't eat it.

Q: How is a woman like a condom?
A: They both spend more time in your wallet than on your dick.

Q: What is the similarity between a woman and Kentucky Fried Chicken?
A: By the time you've finished with the breast and thighs, all
you have left is a greasy box to put your bone in.

Q: How are tornadoes and marriage alike?
A: They both begin with a lot of sucking and blowing, and in the
end you lose your house.

Q: Why doesn't Mexico have an Olympic team?
A: Because everybody who can run, jump, and swim is already in
the U.S.

Q: How do you circumcise a hillbilly?
A: Kick his sister in the jaw

Q: What's the difference between Courtney Love and Wayne Gretzky?
A: Wayne takes a shower after 3 periods.

Q: What's the difference between love, true love and showing off?
A: Spitting, swallowing and gargling.

Q: How can you tell if your wife is dead?
A: The sex is the same but the dishes pile up.

Q: What do you call a prostitute with a runny nose?
A: Full.

Q: How do you make 5 pounds of fat look good?
A: Put a nipple on it.

Q: What should you do if you girlfriend starts smoking?
A: Slow down and use a lubricant.

Q: What's six inches long, two inches wide, and drives women wild?
A: Money

Q: What's the difference between your wife and your job?
A: After five years your job will still suck.

Q: What's the definition of a male chauvinist pig?
A: A man who hates every bone in a woman's body, except his own.

Q: Why do women pay more attention to their appearance than
improving their minds?
A: Because most men are stupid, but few are blind.

Q: What do blondes and the Bermuda triangle have in common?
A: They've both swallowed a lot of semen.

Q: How can you spot the blind guy at the nudist colony?
A: It's not hard.

Q: Who is the most popular guy at the nudist colony?
A: The guy who can carry a cup of coffee in each hand and a
dozen donuts.

Q: Who is the most popular girl at the nudist colony?
A: She is the one who can eat the last donut!

Q: What's the difference between a pick pocket and a peeping Tom?
A: A pick pocket snatches watches.

Q: Why do blondes like tilt steering?
A: More head room.

Q: What do a dildo and soy beans have in common?
A: They are both used as substitute meat.

Q: What's the difference between a blimp and 365 blow jobs?
A: One is a goodyear, and the other is a great year!

Q: What do old women have between their breasts that young women don't?
A: A bellybutton!

Q: Why do the men in Scotland wear kilts?
A: Because the sheep can hear a zipper a mile away.

You have NO idea who you are talking about here!!! Tim has ALWAYS been helpfull and polite to people. When they get pissy will thats on them. I AM a Ham radio operator!!!! I DO enjoy talking on the CB radio as well. You are acting like that all of the CB radio operators arms drag the ground. To you my friend you are wrong. 20 mtrs is about as trashy as it can get. There are plenty of burps farts cussing etc there as well as other bands. Even 2 mtrs and such. Do I or for the most part other here really disrepect hams first? No..not most of us. SO want if Tim is 20..hell I was 20 once (I think) and was a CB radio operator promoting clean no cussing treat the other CB radio operators with repect. Sure I ran a "illegal" station then. But whatt difference does not make. I will contiune to use the 11 mtr band and will talk 'DX" and run a big radio. SO shoot me. And if you do not like it here then may we PLEASE show you the door....

73's

N0FFH ---yes a REAL ham

all depends what you intend to do with it. if your car is for going somewhere and setting up and talking skip, well go for it. if you want to drive around and talk well dc is the way to go, if you ask me. of course, you might just be crazy enough to fire it up on the street. well in that case, have some fun and kill some cars. isn't it funny to see all those computers going haywire and cars pulling over to the side of the road, he , he. price for this 3000a7 system would be approximately $12,000 not including long nose, of course . the driver , $800.00, the box itself with tube $3 - 5,000. two 250 amp three phase alternators, $1,200. one 200 amp leece neville for the driver (rebuilt), $200.00, brackets made for the above alts, ?????. one external regulator, $ 75.00, rectifier system, $3 - 500, two three phase mobile transformers, $700.00, inverter for filament voltage, $250.00 , 2 antennas, $300.00, bird 1 5/8 100 micro amp power measuring supplies, $2,000. oh that about does it, i suppose and a reason for doing this,.......i think. just think about it mr smith, you could squash doc reaaaaaaaaaaaaaaallllllllllllllll easy,......cd is out.....

hello all, i was just looking for all of your opinions on the JB76 blackcat modulator, it runs in class AB2, and has 2-8417 tubes inside of it, ive heard claims that it can double your audio, when turned on. furthermore, i was also wondering if this box is a reliable unit, the person that would be using it, is contenplating using it as a base unit, with a Tram D201/D201A, would this be a good combo? thanks for your input, and all replys will be forwarded to my best friend. best regards to you all.
Frank in Connecticut.
"CONTROLLER" (AM) Transmittin on 40 @ A Time, On My D201's "Wave's"
"Sideband Omni Broadcaster 52" (SSB).......Keepin it within 20 With My PEP.
...
It should peak around 200 watts and very loud on your D201A..
BTW,. thought you didn't need an amp.....Hehe... it's ok, we all do in these noisy times of skip..... I saw a like brand new JB76 the other day. brown paint on it (tube section) looked as it it never saw any dust. If you find one that looks good, replace the capacitors, and check the tubes... They may be flat, and the caps are sure to be dry.

Decent radio. Frequency mod is easy. Other mods are not easy
if you want max performance.

uh huh, mr smith, uh, me thinks you had better recalculate this situation. sir , power does not come out of thin air. now some will tell you this and some will tell you that, but by the laws of physics, ohhhhhhhhhhh, that is a bad word isn't it. but by those laws, a 250 amp alternator is capable of putting out 250 amps at what voltage, well its twelve, ok, and when you have a unregulated ac alternator, you get maybe 25 volts, however, what does this do to your power. well amps will fall as volts picks up. and if you don't believe me go to the prestolite website and look at their power graphs. ohms law, sorry about that. and if you want to run 10,000, then you have to go to a 5000 tube. and those are the facts on the situation. and having said that you had better make sure you have the power to supply this baby. sounds to me like you want to go somewhere and talk skip. well if that is the case , then go with the 5000 tube. and then you are guaranteed the 10,000. and if you don't believe this rinky dink in texas, then talk to the fine black gentlemen in detroit. they will set you straight on this ac shit. us south texas boys, we have had a history of big dc, well whatever, it does have its good side , except maybe for barnaby jones and golden boy, thats about it. sonny has always been the supplier of big dc boxes down here ,but he has retired and gone fishing, so we are left to find other avenues. cd, is out and gone to bed.....

Hey CD I know volts x amps = watts I know all about ohms law. I don't know about tubes and that is why I posted. I want to learn, everone has to start some where. I thought that is why this board was made so people could talk, sell, and learn things about a hobby we all love. I don't know if it is just me but you come off as being kind of a dick. If it is me I apoligize in advance. I do want to thank you for the heads up on the 3000 not doing the 10kw though. I figured that I would really get about 8kw out of it. I will have to look into the 5000 tube. I don't want to go any smaller than 10kw or I will stick to DC. Thanks guys for all the informatioin it is a great help to me.

While Bill would be correct when he says that a high swinging carrier does increase the average modulation... it does nothing for raising the modulation average within the envelope itself. The speech processor does just that. With the setup I have in my Cobra right now... I can hold a 100% modulation level... regardless of the level entering the mic. This means that a whisper is the same level as a shout. Doing this would be absolutely useless unless you can control the background noise. I have taken care of that with adjustments to the noise gate portion of the circuit. I now have a microphone that is about five times louder than any power mic... with no background noise in the mobile!

I am getting an extreme amount of fuel pump noise in my 2000 F-150. I thought it was come through the power lead until I added a suppressor and nothing happened. When I grabbed the antenna it quit. So I know it is coming through the antenna. Any suggestions??

Hello Ear Plugger DX: Yes the fuel pump generates Radio Frequency (RF) energy out into the open, and the radio hears its, from the antenna. A lot of vehicles experience this fuel pump noise problem.

Ford has a fix for the fuel pump noise problem, hope your truck is new so it is covered by warranty.

Some guys have installed a Radio Shack 10 amp 12 Volt Noise Filter at the fuel pump wiring at the tank, filtering the 12 volt fuel pump line, and have eliminated, or significantly reduced the noise.

From: radiomatt@aol.com
Message-ID: <20001119095101.21269.00000668@ng-co1.aol.com>
Source record: 59798

I have had this for some time. Non-working 40 channel handheld CB set. Problem appears to be in DC power circuit. With new batteries, light does not come on when you press battery check button. In fact nothing happens. Fuse? Bad wiring, who knows. You techs should be able to figure it out. Otherwise in near-new condition.
$25 includes shipping by Priority Mail to US points. Similar in appearance to TRC239 but has battery test button on front. Money order prefered, otherwise wait for check to clear.

If it goes up and down with RPM's, then it is not the fuel pump. If
when you turn on the key with the radio on, and you get a few seconds
of noise and then it goes off, then it is the fuel pump. But if it is
like my 98 F150, then it is your ignition and grounding of the truck.
I have been dealing with this problem for a year now. Good luck and
let me know if you find a cure.

I'm not sure Linus, but I think there are gaps in the frequency coverage, no 10 Khz switch either, I don't know how far the clarifier will slide.

.hehehe..that's pretty good..someone sent me something similar yesterday. What I want to know is, are all the yankees who sent us their parents and old folks gonna actually take some responsibility (OMG) and take care of their folks themselves, or are they gonna float away with the rest of us? I think a well placed air strike across the top of the state near Jacksonville will sever most of the state, but you will still be left with Tallahassee and the panhandle.

A good antenna like the Wilson 1000 will greatly improve the performance of
your rig. Its the most important link in the "good performance" chain.

My opinion, YMMV

Peace, Nick

you see what we mean fred. now i ask you why i would want to be a ham
sir????? so i can talk to the fine outstanding homos like finish gary
the fairy there. i think i will pass on you snotty good buddies and
your fucking precious airwaves. hell son, i don't go to ham bands to
even listen. don't care to. oh i could but i don't make it passed the
tracks, the mini bowl , the supa bowl and sometimes if i am bored, i
listen to bob doing his thing on 27.555. by the way son, i have one of
dem sophisticated icom radios that i popped the top on and snipped a
diode and made it go from 500 to 30. hell don't get mad at me. tell the
japs to quit making them so easily modifiable. so smell the coffee
hambos. some of us jus don't care to join your little pitty party. by
the way fred, i wish to extend a hand or friendship and offer you a
front row seat on the 11 meter bands. man why don't you get out of that
goofy ham stuff why you still can and get to doing some real radioing,
come on , come on??????????????.....cd is out.....

Source record: 59820

Functional distance is determined by antenna quality, terrain, and background noise. The lower the local and background noise, the greater the distance you will be able to copy a signal. For normal activities, CB with 4 watts/12 watts is essentially line of sight, so a hill between will cause a problem. Always use the best available radio and antenna.

I need to know which wires to hook up to which pins on a radio with the
following pinout:

1 - GND
2 - AUDIO
3 - PTT
4 - GND

Please let me know which color wires to hook up to which pins. Also, this is
the correct pinout for this radio. Please do not email me saying that your
radio has a different pinout and that you thought I got it wrong. Thanks.

Tell you what, Chrism. I got hold of one of the first CBS 1000's they made. Did the mods just fine. Why would you assume I didn't? The thing fried twice. I was looking for a certain quality LOUD audio I am partial to and the manufacturer clearly said to not to do these mods. I did 'em anyways. Finally, after frying a second time, we ripped out the entire heat sink and put a larger one in. Where the speaker used to be, I now have a fan installed, cooling a solid state unit so it don't blow again. The heat sinks are not adequate, the meter lights have burnt out over and over, the needles stick, the clarifier is a joke, the 5 khz jump switch was off from the factory as was the alignment on sideband, the last part that melted (2SA1301) was replaced by a $1.50 Toshiba made stereo chip, hell, I can go on. I am not the only one who has these same problems. If you want, I'll point you to a whole club of anti-cherokee folks with the same problems, ditto for the knock off tomahawks and other clones. At least at the price, they are semi-disposable and can be afforded to push their limits.

The tone of your message suggests that some civility is lacking on both sides. If you don't judge all hams by our Finnish friend, I won't judge all CBers by your reply. They make chocolate and vanilla so folks can make a choice. As a ham I can only extend an offer to help those that may have an interest.

I am in the process of elmering 7 CB folks that had a desire to become hams. If you do not that is your choice, however to offer remarks such as "pitty (SIC) party" hardly helps to make the situation better.

Gore, like Clinton, is showing everyone that corruption is to
be rewarded. He is an inspiration to white collar crooks everywhere,
and is celebrating it with gusto, as if he were a true American hero.
>
> The Party of No Shame (aka The Democratic Party), firm in its
conviction
> that its ends justify the means,

This, of course, defines fascism. We have the Globalist Socialist
Party, which is a world based fascism, much like the National Socialist
Party was a country based fascism.

> is making a blatant grab for power.
Instead
> of shouting, "stop, thief," the media is helping Al Gore and William
Daley
> steal the election.

Exactly. But the media is not fooling everyone like they think. They
are making fools of themselves, being caught in a blatant effort to
contribute to the white collar theft of the millennium. That is why
the stock market keeps on going down. The world, not so entrapped
by the propaganda of american media, is looking upon America, and seeing
some nasty implications. When Al Gore speaks, market falls, when
Al Gore scrapes out another white collar crime victory, the market
falls, as media continues to back Gore to the point of sheer absurdity,
the American market falls. And as Gorons and Bushians both claim that
government is corrupt, the American market erodes away.

Goebbels-style propaganda has taken over from
news.

I am cleaning out the Shack. I am open to trades and offers.
Things I'm interested in (but not limited to): Shortwave radios, Scanners,
VHF SSB Gear, HF Gear.

Kenwood TS-520 HF Radio
Cobra 142GTL Base CB
HTX - 202 2m Handheld
Utica 650 6m AM tube rig w/ VFO
HR-2600 10m Rig (Need alignment)
Antronn 99 10m/11m Vertical (w/ Ground Plane Elements)
Diamond X-300 2m/440 Dual Band Vertical (w/ Ground Plane Elements)
Moonraker 10m/11m 4 element Quagi (Switchable from horizontal to vertical
polarization)
Astron 70 Amp Metered Power Supply
Astron 25 Amp Metered Power Supply
Mirage 2m 160w Amplifier
Texas Star 500 10m/11m Amplifier four-transistor Amp (Needs Work)
120 watts Home- Built 10m/11m two-transistor Amp
Radio Shack Pro-64 Handheld Scanner
Bearcat 760xlt mobile
Turner Plus 3B Desk Mic
Turner Plus SuperSidekick
Kenwood MC-50 Desk Mic
PDC-700 Power Scanner 10m/11m (SWR,Mod,Power)
NDS TA-27 RF Pre-Amp w/ Variable Gain
Citizens Band Field Strength Meter
Regency HX 650 Scanner (Crystal Type)
R-390A/URR Military HF Receiver (GREAT! Condition)
RG-8,RG-8, and more RG-8

This is the Radio Equipment I am parting with:) All Equipment is in great
shape. If anything here interests you let
me know.

5913. Will CB Antenna Affect My '76 AMC Pacer's Value?

Newsgroup: rec.radio.cb

Source record: 59841

Hi! I have a classic 1976 AMC Pacer.
It has been in our family since then!
It has 211,017.5 miles on the odometer.

I just got a CB for my birthday, but I am worried if drilling
a hole in the roof of the car may affect it's resale value,
should I ever sell it.

Should I drill the hole, or say the heck with it?

Many Thanks, good buddy!!

Resale value? Are those things worth anything to begin with? Also, how much do you think you could get for a car with 211K miles on it? Even if the car was a high end luxury car, 211K on it would dramatically reduce the resale. I couldn't tell you about drilling the hole though. I shy away from that kind of stuff...

No User,
If the normal precautions are taken, it shouldn't make
any difference in the resale value to drill a hole for an
antenna. Makes no difference if it's a Pacer, or a new
Rolls Royce.
'Doc

>>>NO NO NO!!!!!!....I told this guy already!!! The best way for loud
modulation
is buy one ass kickin mike like an astatic D104 and get your face right into
the mike and YELL YER BALLS OFF!!!!!!!!!!!!!!!!

937...workin this audio in chicago<<<

or get a better radio , like the deltaforce , a wisper is just as loud a yell .
no screaming needed , or powermics .

get a good radio , don't modify the modulation , that just distorts the audio .
then buy a amp (don't have to be big) . you will have a nice good strong
clean signal .

anything over 100% modulation is distortion .

origional question was "What is the best approach to to take to
run with the big boys and still have audio quality?"

you cannot , if ya want to run with the big dogs ya have to sacrifice audio
quality for power , plain and simple .

> lets see. we have 25.600-27.995.

And so do the UK CBer's who have legal use of some of those frequencies. They really don't like the American Cber running sideband on their FM channels. I do read the UK CB radio news group too, and they don't have much to say good about people like you Tim. You can't even operate illegally with screwing up other legal CBers around the world. Tim, you bitch about how you didn't want any interference to your activities. Did you give any thought to whom else around the world your signal was causing problems for? I don't think you really care. All you really care about is your own selfish interest, and that comes at the expense of everyone else whom you interfere with because of your illegal operations.

> thats a nice big chuck of some of the best spectrum around during these high
> solar years like were in now.

Not really, again you assume everyone lusts after HF access, not so. And in a few more years when the solar cycle is down, 11m is dead, even 10Kw will not do you any good trying to work DX. So while your wasting time waiting for the peak of the next solar cycle I'll still be having fun on V/UHF.

> were doing every type mode possible on hf

But not on V/UHF. 8-))

> and dx'ing across the world in the day and evening and at night when the dx dies
> down

And after a few years when the solar cycle dies.....

> we can rag chew with locals 100 or so miles without anyody's repeater
> system to rely on or without switching antennas or radios

then you will be lucky to talk more than a few hundred miles on 11m, and I'll still being doing things you can't do on 11m, including DX. 8-))

I feel sorry for you Tim, you act like a Ham, but you are afraid to leave the security blanket of 11m. Too bad, you may have made a good Ham if you had just tried. You would have been a good CBer too if you followed the rules for 11m, which would leave other international CBers one less American CBer to cast shame over those who do operate within the limits outline in Part 97.

The addition of anything would not cause a change in the value of a 76 Pacer
regardless of mileage.
Still worth about $20.00 per ton last time I sold scrap.

> :"Well the first thing their going to want to know is how to "mod" a 50
> watt 2m rig to run on the MURS frequencies for more power and range. The
> next thing is how to keep them from showing up on 2m."

And sure enough that is what will happen. You let a bunch of people with the
attitude shown by many CBers who run illegal power, and out of band
operations, it will happen on the MURS bands. Even the people who use FRS
radios are messing with modifing the things. The record is clear, MURS will
sooner or later end up like 11m, and the Hams are going to have to put up
with the crap, and try to keep them off of yet another Ham Radio only band,
2m.

> Suddenly, when I post exactly the opposite of your statements, and whats
> *actually* going on, you go off on some unsupported defensive rant.

What was unsupported was your comment about Hams using modified Ham gear on
MURS, based ONLY on your observation that a Ham call sign was used as an ID.
You want to rant then come up with some solid evidence to prove your point,
such as a Ham getting busted for using his modified 2m rig on MURS.
Otherwise all you have is an ax to grind and no handle to swing it with.

> Its clearly apparent that you've never even been on CB MURs yet your
compelled
> that every non-licensed person on the band wants to somehow emulate Hams
by
> using Ham equipment which couldnt be further from the *actual* truth.

There are already too many CBers using modified Ham HF equipment on 11m. Now
we have the FRS service, and its well know that many Ham HT's can be "opened
up" to operate on those bands. So can Ham 2m rigs be modified to operate on
MURS. It just a plain matter of fact that ham gear can be modified for out
of the normal Ham Bands use. Thats why people end up using the things. You
can buy them used at local Hamfests cheap. The CBers on this news group seem

to like pointing out much of the equipment used out of band, and the amplifiers are old Ham equipment.

> Guess what? The reason why MURS now exists is to circumvent the ham license
> process altogether by giving real people the use of the 2 meter VHF airwaves

Its to give people who are not technicaly qualified to build - modify - experiment with high power radio equipment use of the VHF band.

> which hams have hogged to themselves for the past 50 years.

The license is available to anyone who can pass a simple 30+ question test. You mean you can't do that? We have kids 9 and 10 years old with extra class tickets.

> CBers can now
> enjoy every mode on 2 meters that you had to get get you Tech license to
> have.....

Nope, no fast scan TV, no satellite communications, no high speed microwave data links to name a few.

> felling a little pissed Leland?

Nope, I feel sorry for them, CBers. Some of them look like they would like to do more than they are getting away with on 11m, but can't because they don't have access to the spectrum nessessary.

> It sure sound like it to me.

You sound pissed however.

> Im not upset about it at all. I know very well that Hams are using non type
> accepted equipment on MURS frequencies

I'm still waiting for your "proof", and I don't see any yet. 8-))

> when the reverse happens. Let me guess, Hams that arent MARS certified can
> open up their radios

Yes we can, and Part 97 rules allows use to modify our radios. You can go and get your own copy of Part 97 and read the details for yourself. However what we can't do is use those modified radios to transmit on bands we are not licensed to use.

> yet CBers arent allowed to open up a Ham radio to 11
> meters or MURs freq's? I dont think so.

That's right, they can't. Go and get a copy of the Part 95 rules and read the relevant sections. CB, and FRS, radios are type accepted and CAN NOT be modified, period.

> The pendulum swing both ways. The
> Part 97 fines for a Ham having a tranceiver that been opened up is far
> greater than that of a CBer using a non-type accepted radio. Every ham you
> know with an open radio has a MARS certificate right?.............

You really are clueless about Part 97. Go read it. FCC does not care what the Ham rig is modified for, MARS or CAP, so long as it is not OPERATED there without the correct license in hand.

> I hate to break your heart Leland but the is NO SUCH THING AS VHF SKIP.

Duh!! Now I know for a fact you don't know what your talking about. There is in fact Sporadic E , Aurora, and FAI skip too. Since you like to quote the ARRL handbook go read section 21 pages 11 to 13 of the 1999 edition. It talks all about them and how to spot them on VHF. If you disagree with what you read there then take it up with the ARRL. They wrote it. 8-))

ham
> to modify a amp for ten meters?

Since you're referring to my comment about 9 and 10 year old extra class hams I assume, they are NOT qualified to work on anything of that sort. You can teach them to memorize the answers to the exam questions, since they are published, but they don't have much of an understanding of what is involved. Would YOU trust a 9 year old to mess with YOUR high power tube amplifier unsupervised? Would you tell a 9 year CBer on this news group to stick their hands into a high power tube amplifier?

If you even bothered to read the Ham Radio news group you will have quickly discovered that many Hams feel the exams are far too easy, and something needs to be done. What that something is happens to be a subject of heated debate at times. School would be a joke if all your teachers gave you a list of all possible questions, that could appear on an exam, and the correct answers to go with them. Would it be fair to say that the person who studied the material, and understands it is the equal of one who simply memorized the answers? If this someone was your doctor, for example, which one would you trust?

well...i sent that last message before i finished reading yours

the heat sinks are PERFECTLY adequite if you are not running too much power

when you moded it for more power then the heat sinks couldnt keep up!!

it isnt the manufacturers fault!! they can't take into account that you will do illigal modifications!! so WHY are you blaming it on the manufacturers fault when you dont even think about heat problems from running too much power?

i am running a cherokee cm-10 and i have not had a SINGLE complaint about it.

Blonde Jokes
She Was Soooooooooooooo Blonde:
..she took a ruler to bed to see how long she slept.
..she sent me a fax with a stamp on it.
..she thought a quarterback was a refund.
..she tried to put M&M's in alphabetical order.
..she thought Boyz II Men was a day care center.
   She Was Soooooooooooooo Blonde:
..she thought Eartha Kitt was a set of garden tools.
..she thought General Motors was in the army.
..she thought Meow Mix was a CD for cats.
.she thought TuPac Shakur was a Jewish holiday.
..under "education" on her job application, she put "Hooked On
Phonics."
  She Was Soooooooooooooo Blonde:
..she tripped over a cordless phone.
..she spent 20 minutes looking at the orange juice can because it said
  "concentrate."
..she told me to meet her at the corner of "WALK" and "DON'T WALK."
..at the bottom of the application where it says "sign here," she put
  "Sagittarius."
..she asked for a price check at the Dollar Store.
   She Was Soooooooooooooo Blonde:
..she studied for a blood test.
..she thought she needed a token to get on "Soul Train."
..she sold the car for gas money!
..when she missed the 44 bus, she took the 22 bus twice instead.
..when she went to the airport and saw a sign that said "Airport Left,"
   she turned around and went home.
  She Was Soooooooooooooo Blonde:
..when she heard that 90% of all crimes occur around the home, she
moved.
..she thinks Taco Bell is the Mexican phone company.
..if she spoke her mind, she'd be speechless.
..she thought that she could not use her AM radio in the evening.
..she had a shirt that said "TGIF," which she thought stood for "This
Goes
    In Front"

Like I said, I pushed it's cheap little limits. I wasn't happy with the sorry, wimpy modulation and I was looking for some swing. According to the manufacturer, any mod other than the conversion is considered "screwing it up". But after reworking half the damn radio it screams on AM but is still an alignment slider type on ssb.

I just aquired an old D-104 that was made in the 60's. It hasn't been used for about 30 yrs. and I fired her up today. Well the transmit switch seems to stick, when you push it to talk you have to manually pull it all the way out to get it to release. It will come out most of the way but just not far enough. Is there any maintenance I can do to it as in clean/lube up the switch or blow it out ?
How do all you guys fix this problem when it occurs ?
Thanks,
Speedy

Usually you slide the adjustment slip ring down, perhaps yours is missing ?
Not much to get stuck (leaf switches)
Watch out ! .....Possible some spiders or cockroaches dead in the
housing tube
or now loose in your house.
:)

Blond Joke
A blonde is walking near some railroad tracks. A brunette approaches.
She's hopping from rail to rail saying "29, 29, 29...".
The blonde watches for a while.
The brunette seems to be having a good time, so she decides to give it a try.
Now the two of them are hopping from rail to rail chanting "29, 29, 29, 29...".
A train comes along and the brunette hops off of the tracks.
The blonde, however, is so engrossed in what she's doing that she get smashed by the train.
After the train passes, the brunette gets back on the rails and starts hopping again.
"30, 30, 30..."

Speedy,
Other than cleaning the mic, it sounds like the contact
springs/leaves may be misadjusted, if it won't 'come out'
far enough. If you try to adjust them, be careful. A little
bit goes a long way, you can over do it real quick...
'Doc

Since you ignored my previous post on this matter, I am emailing
this to you as well as posting it:

White - audio
Shield - audio ground
Blue - switch common
Black - receive
Red - Transmit
Yellow - grounded during transmit to blue. Good for keying an amp.

Most radios require that the blue and shield be connected together.

Greetings,

Surprised to find this post on the CB newsgroup - my first glance at it while searching new groups in deja.

A question to my fellow HAM's. I got my license when I was living in Canada years ago, I want to become active again but am wondering what to do with regards to licensing. I've been able to maintain my VE2 for over a decade (advanced) but wonder how - if possible - I can obtain a New York prefix with the same classification.

Does anyone here know what the procedure is, would the FCC recognize my class and just request a regulations test, would I have to do the whole testing thing again???. I called an FCC office in Philadelphia about 10 years ago and was really perplexed at the person's suggestion that I just keep using my VE2 prefix and just add W2 at the end of it! I understand that there's a reciprocal agreement between the US and Canada but I'd really like to get a 'home' prefix.

I'd appreciate any information and/or suggestions.

Thanks so much in advance!

73's de VE2-KGM/W2

in the daytime, the band is open and the skip is running. you can hear signals from all over the world. so a high meter reading will be normal with the rf gain turned all the way up..... at night time the band shuts down and all you hear will be local signals... the rf gain controls the sensitivity of the receiver.... if you are mobil and trying to talk to the car in front of you and he is so strong that he is vary hard to understand then you can use the rf gain to kill the first amp in the receiver.... it will drop his signal down low enough to understand.... what sometimes happens is that 2 days later you say --- damn! this thing ain't hearing anything, must be broke...so you take it to a CB shop just to find out that you hadn't turned the rf gain back up....

the delta tune shifts the receiver to one side of the channel or the other in case the person you are talking to might be a little off frequency..... not needed with todays radios... they don't get off freq. very easy. I think the reason they still put the delta tune in AM radios is so that when you add a connex board to the rig you have someplace to put it.... a connex board adds the echo sound that the truckers like.... when you get my age it just makes it hard to understand ha....

the mic gain is the volum control for YOUR voice into the mic. the higher it is the louder you will be.

hope this helps...

After watching CNN news reports about the US presidental election and the "hand recounts" in Florida, I can only wonder why you Americans are putting up with so much outright fraud and corruption. I could understand it if the elections were being held in Angola or Somalia, but in the States? Didn't you Americans start using voting machines in order to reduce the corruption?

Maybe it's time for you to ask the UN peacekeepers in to supervise your elections. At least then there would be fair and consistant rules used in counting your votes.

Right now, it looks like your lawyers are the ones who will decide who your next president is.

What a farce.

The button pushing only works if the proper pads are jumpered. The radio has an overly sensitive receiver and no RF gain control and a poor noise blanker. It is hard to adjust out noise particularly if you in a large city all the neon coupled with the skip makes it unusable at times.
The channel manipulation requires two hands. Hard to do mobile. If you don't power off the radio before you turn off the car you lose your memory settings. This radio is better suited as a base unit but a Grant would be a better choice.
"GrtPmpkin32" <grtpmpkin32@aol.com> wrote in message news:20001118162554.08720.00000477@ng-fz1.aol.com...

John Distai wrote:
>
> Hi.
>
> I have a new Uniden 78LTW that I have some questions about. The radio came
> with instructions, but they are extremely poor.

Congratulations. Good radio. One usually bought by people who are moving up from the cheapies. <Grin> Others have answered your questions about features of the radio, so I'll natter on about a couple of points. BTW, I run a Uniden PC68XL with a 48" K40 antenna. And my SWR meter is a Micronta unit that I bought many years ago.

First of all, I set my squelch and RF gain so the radio is silent unless a signal stronger than the background noise is received. I have no interest in listening to static or garbled skip. I mainly want to know about road conditions and where the bears are. And I like to talk to other people to pass the long boring time needed to get where I'm going.

> "Adjust RF Gain to optimize reception in strong signal areas"

In other words, if the skip (static noise) is running high, you turn your RF gain down so you don't have that noise overpowering your squelch. These days with the sun acting up during the daytime, my RF is turned way down. At night I turn it back up. So, during daylight I don't have much distance with the radio. Maybe a mile on really bad days. During the night with the RF turned up, I can hear someone ten miles away.

> Also, this radio has a meter on it. While receiving, with the RF gain
> turned all the way up, the meter always reads on the edge of the green and
> red. Is this bad?

No. The meter is just showing you the "signal strength" that it is receiving. Doesn't really mean anything or affect anything, but it could give you a rough idea of how far away someone else is when they transmit. For instance, if the needle hits 30+, then you know you can see the whites of the eyeballs of the guy sending. Unless he's got really good shoes on, in which case he might be hundreds of miles away...

> If I transmit and the meter goes into the red is that bad?

Maybe you just have a loud mouth <BG>. Legally, you should only have 4 watts of transmitting power. I've noticed that my Uniden sometimes shows me transmitting 5 watts when I talk loudly. Nothing to worry about. Usually.

> Also, what happens if I turn the SWF calibration knob after I've tuned the
> antenna? I've noticed if I do this the meter reads 3 or more. Was
> something changed, or is the meter just not calibrated any longer?

The meter is not calibrated anymore. If you are worried about it, check your SWR. If it's good, then don't worry, because your antenna is set. Once the antenna is tuned, playing with the knobs on the radio isn't going to upset the tuning, it's just going to give you a strange reading on the meter.

> What kind of distance can you expect from a stock CB and a 38" magnetic
> mount antenna?

The answer is ... it depends! On the radio quality (you've got a good one), on the antenna quality, on the level of 'noise' in the area, on the terrain, on the amount of metal structures, etc etc etc... Figure on getting about 5 miles in good conditions, 3 miles in built up area, 1 mile when the sun is acting up, 10 miles in the country at night...

> Is signal distance also a function of terrain?

Sure is. If you are down in a narrow valley with rock surrounding you, you may be able to talk to an airplane, but nobody else. If you are on top of a hill where you can see the town twenty miles away, you'll probably be able to talk to someone in that town. I live in a town on the shore of Lake Superior. One short stretch of highway is 11 miles away as the crow flies, but is visible across the water. I can talk to trucks there while I'm parked at the beach in town.

Nope. Requires simple solder jumper in the control head.

> is done, are the extra bands all-inclusive, or are there some
> freq. gaps?

There are gaps.

> I like to monitor some radio clubs on their 'home channels" in the
> 27.800 range and if there's a gap there I'd want to know about it before
buying
> one! :-)

The radio has channel "bands" rather than step tuning like
in the 2510 and 2950 style radios. The stock varactor is
very narrow and is a surface mount device. So, don't
expect to fill the gaps by doing a simple clarifier mod.
Running the stock varactor from zero to 8 volts only gets
you a little over 6 kHz of slide.

If you need no-gap coverage, go with one of the new 2950s.

Griffey should know better than that. Processing doesn't
hold a candle to a good CCAM or negative peak compression
mod.

The most impressive AM signals are the ones where the
average power increases with modulation and where the
negative modulation peaks are not allowed to cut the
carrier off completely.

The original author would be well served to go to the
e-groups site and dig through the CB Tricks mailing
list archives from a few months ago. Pay particular
attention to anything that has to do with negative
peak compression. Chances are you'll find a mod package
outlined there that pertains to your particular radio
that represents the state of the art as far as trans-
mitter mods for big modulation.

A Uniden Grant or Texas Ranger 966 would be my choice. They can be had tuned and peaked for about $175. Dont forget that a good antenna is the most important part of your set up. A Wilson 1000 for $60ish is a good choice.

My opinion YMMV

Peace, Nick

Greetings!

Some methods to help improve modulation are, Negative Feedback - the stage has some of it's output applied to the base, in opposite phase to reduce even order harmonics. It reduces drive, and allows for more headroom for heavy audio modulation.

However, I'd prefer a method similar to Assymetrical modulation. I began a series of experiments on SSB radios to see how the circuit worked and located some books that describe it's use and applied them.

See this URL to help follow along...

http://www.iserv.net/~codyspc/PC122XLmods.htm

Many of todays radios use audio applied to both the driver and final. Although offers plenty of audio in it's current fashion, excessive drive causes other conditions, splatter, TVI, and RFI - in your neighbors equipment they've spent money for, to watch and hear something else on, not you.

Looking at the link above, many of the techniques used in the mods can be applied to ANY radio to improve modulation.

The technique is simple, instead of two stages having audio applied, you use three stages - in some cases the gain of the last stage can be eliminated and used as a simple linear amp which further reduces the RFI/TVI problem. The last stage without audio applied, operates within it's operational window and produces a cleaner signal to help the output network reduce harmonic pass-thru.

Using up to three stages allows the RF envelope that contains audio to increase in the previous stage, before it's applied to the base of the next stage. This then drives the stages' transistor to generate a larger envelope.

Since it's tracked at an audio rate due to it's collector also having to work as both a power source [DC for carrier/bias] and mixer [DC and audio] - the presence of the larger RF envelope for the audio - reduces the potential for splatter by forcing the transistors base to conduct with a larger amount of RF - keeping modulation from causing clipping and maintains 100% modulation.

You can remove the last stage if needed, and will work as a simple biased linear amp. Keeping the signal cleaner, because the stage is not forced to amplify audio with the carrier/audio mix also applied to the base. This helps keep bias stable and in doing so, reduction of

harmonics and splatter - keeping neighbors happy.

What the end result is, is compressed audio without a lot of splatter associated with heavy drive audio. It's got a nice punch to it. It will have some distortion products to it, but intelligibility is increased.

You don't have to try it, if you have the jitters. But, knowing the principles can help you - especially when you run into the TVI problems with some of the other mods you are suggesting.

Greetings!

No, but if you're picky - and want an even SWR across the CB band, a
slight trimming can be done - IN SMALL AMOUNTS!

If the whip is all the way into the base, some trimming of the whip to
help shorten it and low the SWR even more can be done to help
alieviate your worry. Trim on the base end, not the tip of the whip.

But, you really don't have anything to worry about.

Greetings!

Ouch, since you've found out about the 20 ohm resistors, you should replace them with the correct part, the R/S clerk may have inadvertently given you wirewound resistors - they need to be carbon composition types.

If it still heats up - take it to a tech that has a scope so you can observe the waveform. If it really got hot it can cause a cascade failure and take put more parts, not just the pills either.

Source record: 59904

Greetings!

http://www.iserv.net/~codyspc/cb1.htm

It brings up a PC-122 from Uniden, but the parts you're asking about are on that radio except DSS - a noise reduction enhancement, Mic gain, and Delta tune is another function acting like a clarifier or voicelock control. Clicking on the radios face brings you to the different controls and clicking on the "Uniden" of the faceplate brings you back to the index that allows you to see what else is covered.

Another link to look at to help you understand the noise, is:

http://www.iserv.net/~codyspc/skipis.html

And for further information about radio propagation - a set of links can also be found here...

http://www.spaceweather.com

Look for the Space Environment Center links [SEC] - it's home page can help you too...

http://www.sec.noaa.gov/SWN/index.html

This site gives you the latest information regarding many issues surrounding skip events and other warnings/alerts that can affect your S-meter readings and your questions regarding distance you can communicate.

Yes, terrain does have an effect on distance you can communicate, as well as ambient noise from skip and other events listed in the URL's above...

Hope this helps.

5994. A few notes to share over the 77-115

Newsgroup: rec.radio.cb
Date: 2000-11-20 00:00:00 UTC
From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <b0jh1tg2c000pp3f1019v93cu3ccas2la6@4ax.com>
Source record: 59906

cc'd to www.midlandradio.com in hopes to see them survive the rather complex world the CB life is...

Greetings!

Just wanted to post some notes about the Midland 77-115 of changes that might help some of you that have encountered problems with audio squeals and bassy audio.

Many of the complaints I've heard from, and seen out here on the NG, have been due to the radios inablility for audio during TX to remain stable, quit squealing, under a wide range of installations and uses.

It deals with KIA324 quad-op amp, it serves a series of functions, AGC, Squelch, and Mic-Amp section.

The components I'm talking about are

C222 - Axial cap .001uF [102] Lemon colored
R235 - 150K resistor [Brown Green Yellow]

And IC202 KIA 7217A audio amp chip...

C235 - 220pF [221] disc cap
C238 - Tantalum cap 4.7uF 16V
C242 - .047uF [473] disc cap

Changing the first two parts to lower values on the Mic gain amp section of the KIA324P helps. These two function as part of a Negative Feedback filter and gain control for the Mic-amp.

The cap is the tonal filter, it can be changed to a lower value to improve the tonal quality of the mike - it doesn't affect receive audio. I substituted a 470pF [471 disc cap] to increase the trebel range.

N I do not recommend that you remove the cap completely, you
O will still have the squeal problem and very tinny audio if
T you do. The overall gain of the circuit can be affected by
E removing the cap to a point that the radio is unuseable for
! TX.

R235 controls overall gain. In previous Midland radios, this part is a 100K resistor [Brown black yellow] and changing this 150K resistor to that 100K value along with the capacitor change, improves the audio tone but you will now find the audio level is still bassy and lower in volume.

We now focus on the Audio Amp KIA7217A IC202 - C235 a 220pF cap. Replace it with a 150pF cap.

Once again, previous Midlands that use the KIA7217 style chip, had Gain Compensation capacitance of approximately 100pF here. This value is too low and affected gain and increased likelyhood of squealing audio when attempting to use a power mike. Changing the 220pF cap, does affect the gain, and also affects bandwidth frequency response. The rolloff was about 1.7KHz - changing this to a 150pF raises the overall gain to compensate for the loss of gain at the mic-amp, along with an improvement of tonal quality to a less "bassy sound" from your transmission. This also affects receiver tonal quality and improves the tonal quality of the received transmissions including WX.

Another set of caps that needs help here, is C242/C238.

As some of you remember, I posted a "quick fix" to help some people with the squealing of audio some years back, regarding C238 cap. It's a Tantalum and was part of Pin 7 of IC202. It's part of the non-inverted input tonal filter and gain control involving R262 [56ohm Blue Grey Black] - it's trace to the main ground plane of the board was cut. A jumper was soldered from Q409 [squelch control] to C238. Soldering the cut trace to connect C242 and C238 to the main ground plane - helped to improve the noise figure when used in a noisy mobile. It also helped remove or lessen the squeal that some would get while attempting to use this radio with a magnetic mount and the radio wasn't properly grounded to the frame of the vehicle.

However, removal of SJ187 helped improve this noise figure considerably more. The filter cap for the power supply 1000uF C244 was disconnected from the audio amp chip - this added to the noisy ground plane problem. Removal of the jumper SJ187 prevented a ground loop from forming with the chassis panel - which would act like a crude antenna and pick up extraneous ground currents and the audio amp would simply add them to the overall noise figure present.

The bootstrap, ripple filter on Pin 3 was not attached to the main ground plane input pins for audio at Pin 7 - hence the C238 problem. Soldering over the cut trace on the foil side of the board brought this section together and shared a common ground.

For those of you that would prefer to use the original stock mike, I would also recommend that you can change C903 [102] Lemon colored axial cap [Brown Black Red] to a lower value - like 220pF, the now-spare cap you replaced on C235.

Also, the addition on a 1.2 ohm resistor on the C242 in series with the cap - lift a leg of the cap off the board and solder one side of the resistor here with the other where the lifted leg of C242 would go. This mod balances the output of Pin 10 to the Modulation Transformer T201. There is an impedance shift that occurs when the radio is driving an 8 ohm speaker, and switches over to a more complex impedance of audio drive on the collectors of the Driver and Final

[Q303 2SC2314 and Q304 2SC2078 respectively.]. It's a "fudge factor" that Cobra uses in their AM only designs using the KIA7217-type audio amp chip.

Although these notes are the most current I have, I cannot guarantee success with other installations if you change the above values.

As always, I ground the radio, using the bracket, to the frame/body shell of the vehicle, and use a permament mount for the antenna. It is what I recommend to anyone whom is interested in trying CB to do. But, each person is unique and so therefore the disclaimer.

I would like to thank all the contributors to this fine discussion, which is ten-four to me, so to say. If a CBer wants to go on using his illegal gear and so on, well... A ham is a ham, no matter what you guys might say. We have nothing to fear, our activities can stand day light and scrutiny from the authorities.
For some reason I got lots and lots of replies, some of them really amusing. Let's hope you can go on doing the CB song and dance about your "rights" to 27.555 or 6.5 MHz etc. I simply choose a band and start working. With or without a linear, all legally.
The case rests.

Gary, oh8mfh,
Finland (that's the OH...)
P.S. So that you won't get confused: legal CB is OK, it's just that I can't stand the arrogant, criminal CBer that seem to read this ng. Any CB in my area are welcome to the ham courses, as before.

If you bother to check it out (http://www.geocities.com/rf-man/cb/) you will find that frequency (27.555) is outside of the UK band for their CB radio service, however Tim was running slow scan TV on 27.700, which puts that emission mode right in the lower part of the UK FM CB band. Second I hear SSB signals all up and down from the top of the US CB band to the low end of the Ham 10m band, and inside of the window too. Many of those signals are in Spanish, but I do hear American English too. Those signals are not confined to the frequencies between the top end of the US AM CB band, and the bottom end of the UK FM CB band.

> Apparently these same 9 year old kids know a hell of a lot more than you
do.

All it proves is they can memorize a bunch of answers to a list of questions. As I pointed out, in a prior post ,this is the single biggest problem with those exams. So I will pose the same question to you as I did Tim, would you recommend a 9 or 10 year old to stick their hands inside of a high power tube amplifier unsupervised, after having passed one of those tests?

> How come your not posting your local murs text like the guy asked you to
in
> the previous posting?

He does not even know about VHF skip, he did not even know the ARRL manual he was so fond of quoting talked about the very thing he claims can't happen. Then finally some of the CBers on this news group are at least smart enough to know there is in fact VHF skip, and had to point it out to him. Then to cap it all off his sole "evidence" that Hams are using modified Ham gear on MURS frequencies was based SOLELY on seeing a Ham call sign in the data stream. Who knows how that call sign got there, and there is no logical relationship between what terminal equipment is connected with which kind of radio. Posting a MURS text from a data stream might be fun to read, but does nothing to prove proof to further the argument either way. Now to keep things focused, his initial statement was Hams are using modified un-type accepted Ham radios on MURS. He has yet to provide anything other than seeing a Ham call sign, which proves nothing for the previous reasons I outlined. I am still waiting for his "smoking gun" proof.

Well just because you just picked it up doesn't mean it can't be
modded. I think the new one is designated CM10+ or something, that I
know for a fact can't be modded.

BUT...if I could do it all over again if I were you I'd save up for a
new RCI2950 or find a nice one used...not as compact but does alot of
the same things.

'Classic'??

That's gotta' be one of the ugliest cars ever designed! (..at least it WAS until GM dreamed up the 2000 Aztec!)

I don't think the CB antenna will affect your Pacer's value, but if the Pacer is not removed from the antenna before sale, it may drastically reduce the resale value of the antenna.

Greetings!

Are you asking if the Radio will lose it's resale value if you decide
to sell it after installing it in the AMC?

Well, tell them it's the best darn ground plane with a view on four
wheels!

Putting a pretty antenna on a vehicle like that will diminish the
resale value of the whole radio system.

If the thing is still intact - tell them you'll sell the radio, and
you'll throw that old AMC Pacer in with the deal for free!

Had to do that with a Ford Aspire once...;-)

[*clunk*] Sorry, I just had to laugh...!

Why is everyone afraid to build their own brackets. With the dimensions of the holes you should be able to make an adjustable bracket that will take a certain pre selected belt. I would think that would be the tough part (finding a belt that would fit).

Larry, I totally agree. History. This one could eventually see serious civil unrest, bloodshed. I seen the same thing you did in that Gore said all votes should count and Lieberman said on the news that same thing, then to find out that Gore/Liber protested the oversea's vote's that had no postal mark. What a bunch of bull. To bad ole Thomas Jefferson wasn't around, I believe he had a way of dealing with political corruption!!! Marc.

You did! Well I will just point it out again just for you to be sure. Tim mentioned in another thread how he did not want to attract people who would interfere with his slow scan TV transmission on 27.700 the other day. Instead he was operating on top of the UK channels causing them problems. I doubt he checked with any UK FM operators first before he started. Seems to me Tim could care less whom he interferes with so long as it does not bother him. That is a selfish, and careless attitude, to take with his so called fellow CBers across the pond, and most likely here in the US too. I don't think he would give a second thought to stepping on top of your signal, or anyone else, if it was getting in the way of his having fun.

Hello again, Leland. Just because the UK is FM does not automatically imply that the US freebanders are imposing on them. I tend to think that if anyone is causing problems for our friends in the UK it is their own operators who are pirating. When you go to the freeband to "listen", Leland, who splashes you more? The operators here or the operators across the seas? Same over there. I can't even remember an operator overseas who interfered, splashed, or bled me to the point of actually interfering with one of my conversations. By the way, I may be wrong, but just exactly where did Tim say he was transceiving? What I saw was a post saying he had RECEIVED the images he posted.

From: Eric Oyen <n7zzt@home.com>
Message-ID: <3A19A2E5.1980E4A9@home.com>
Source record: 60007

Actually it can.
a tuned antenna can have a definite impact on performance
(usually better). an untuned antenna is lossy and can cause
other problems (such as feedline radiation, high SWR's
and a few equipment problems...

The only drawback to an antenna tuned for best performance
as that it has a narrow bandwidth over which that performance
is best. outside of that, it can rapidly deteriorate (fortunately,
in the case of CB, that performance bandwidth covers most
of the standard 40 channels.).

If you want it done correctly send it to davemade. I am more than sure he
can upgrade your amp.

From: "Maniac9188" <maniac9188@aol.com>
Subject: "Pills" added to X force?
Date: Monday, November 20, 2000 2:48 AM

I own an X-Force Amplifier model X60012. It is a 2 driving 6, with 2290's in
the driver section. It is built on a 16 pill board, so I feel there is a lot
of
room to improve if I wanted to.. First, I must mention, that this amplifier
has: Variable Power, the Biasing circuit installed; along with the Recieve
Amplifier, the Sideband Delay, and the larger power leads (1--10ga, for the
driver section.., and 3--8ga, for the other 6). I was thinking at first,
that
I wanted to add only 2 transistors to the final section, (making it a 2X8).
Now
that I have my new-and-improved electrical system in place, I was thinking
of
uprading to 4) 2sc2290's for the driver section, and 10) 2sc2879's for the
final section. Would this at all be possible? Because I have never heard of
this configuration inside of one box before....
Thanks..

Maniac..

6047. Palomar Amps - Looking for the guy who was auctioning them

Newsgroup: rec.radio.cb
Date: 2000-11-20 00:00:00 UTC
From: Richard Smith <rsmith@NOSPAMplaneteer.com>
Message-ID: <99cS5.320$s3.273@tor-nn1.netcom.ca>

A short while ago, somebody was auctioning a whole pile of new Palomar amps on Ebay and Yahoo (I think they were 250 watts). Could somebody please tell me who that was (his email addres or Ebay username). I lost my copy of his posting and I know a few people who may want to buy some from him.

Thanks in advance,

Richard.

I am either going to purchase a Ranger 4wd or a Toyota Tacoma 4wd...Haven't made up my mind yet..The Ford has a 95 amp alternator and the Toyota an 85 amp alternator..I have found an easy replacement for the Ford, (130 amp) alternator, but nothing for the Toyota, yet..My question...With all the computer crap on the new vehicles, what is the best way to run a 500 to 600 watt amp?? Do you need a dual battery set-up to run the amp off of the secondary battery?? Any help from the group would be appreciated more than you know..Thanks..

..after all. Riley's latest going ons have exemplified the notion of contemporary enforcement. Latest flashes: Complaints are DECLINING. Hear that, all ye' radiocops? No one is rewarding you with a Dewey button or Kewpie doll for your efforts. More cutbacks, include what little resources are left, leads the Feds down that oft traveled, familiar path of "concentrating on more complex issues", such as exam fraud, which, coincidentally, a big to do in Prescott, AZ recently occurred...and Big Bad Bob keeps-on-a-doin' his thing in their back yard. But who do they go after? The hammies slamming tests! What else? Oh yea, the Union Pacific Railroad was sent a warning letter for illegal operation of a repeater system on 147.555. Riley said it was probably "inadvertent'. Of course, how could a multi-million dollar organization that has high paid and powerful lawyers expect to know the law as well as the average cber? One more, a token for our radio security guards, a single (read: one) complaint was filed concerning interference to 10 meters. Couldn't have come at a better time. Riley said he's gonna be at the Dec. 2nd hamfest. Think I'm gonna go meet this guy, shake his hand, and tell him what a fine, upstanding job he has done and that I, as a citizen, appreciate his efforts and results in taking a stand against the horrible crimes committed by and against the hammies community. That was all I had to say and, it's alllllllllll right!

Speaking of an AMC Pacer, anybody remember the Nash Ambassador of the early '50s? This was an ancestor of the Pacer, and only AMC (formerly Nash Motors) could come up with something like this! Everybody called the old Nashes "upside down bathtubs" because they had almost NO wheel openings! This restricted the amount of steering radius, otherwise the wheels would rub the inside of the "fenders". BTW, the Metropolitans, the miniature "Nash" looked exactly like them. I seem to recall having trouble changing a flat on my 8th grade teacher's Nash because when the car was jacked up, there wasn't quite enough clearance between the wheel and the inside of the fender. GRRRR!

Last, how many of you are old enough to remember the '50s song. "Little Nash Rambler"?

>
> When you meet Riley, assume the position. You're busted.

Riley Hollingsworth is Special Counsel for AMATEUR (emph mine) Radio. He is not paid to give rat tits about things below 28 MHz and above 24.99 MHz. Popping 11 meter zits is not in his job description.

That said, incursions into a band assigned to Amateurs worldwide under the treaties is most definitely his problem and one that is not going to go away when there are international complaints thru the State Department.

While this is not a new problem in itself, that's why lower-class Amateur licenses got 10 meter phone privileges in the first place, the newer incursions are largely by people who do not even know they are on 10 meters. They buy a modded rig at the local truckstop and go to 'Channel 19 two up' without knowing or caring that this is 28.085 MHz or that three up is 28.535.

Now cluelessness is not a defense so it is a fair bet that a few truckers are going to be publicly crucified to get the word out. But the real problem is in the hardware; the clueless will always be with you. Running Antique Modulation in a narrowband assignment tends to stick out a bit; no one is that stupid.

It is pretty common enforcement practice to march thru a problem area and 'show the flag' a bit to make it fairly certain that the innocent have a chance to retreat. That way, there are no claims of selective enforcement and it becomes a good bet that the bustee is a real criminal and not some wandering minstrel. The E-bay caper, a few kilowatts of AM on 28.085, and some well-publicized hammering of known Amateur zits should have begun to set the stage for some major crucifixions among equipment suppliers.

My guess, and it is purely that, is that some equipment people are going to be arrested, charged with everything from pissing on the courthouse lawn on up, and have RICO suits pressed that will clean out bank accounts and make sure that every dollar they ever made goes to the Treasury or their defense lawyers. Anyone in the chain from importer to truck stop will be zapped, again to get the message out big time. The risk to an individual is pretty

small but his modded President Fignewton or whatever will have the market value of a '78 Fairmont.

This will have to happen before the next treaty meeting in 2002 so I would suspect next year may be an eventful one.

Don't shoot Mongo, it just makes him mad.

ARE YOU Crazy DOC or what? I guess that's WHY you are a "DOC" and
I am a CB shop! Most of my business is built around NOT drilling
holes, whether it is a 76 Pacer piece of junk, or a 57 Bel Air Sport
Coupe or a Yuppie Sport YOUtillity vehicle. As I remember those
Pacers, didn't they have a chrome or metal bumper on the back of them?
I have a mount for it if they did, in which I can sell you the last
108" whip I have in stock, or a 5 1/2' Francis for it, or whatever.
Usually when holes are drilled, they are patched up when resold. MOST
of MY customers want antennas without ANY damage (holes) to da
vehicle. So I have antenna mounts to suit most demands, unless you
want to look like a BIGGER nerd with an antenna on the top (not a
magnet mount) of a 76 pacer !!!!!! Can U imagine a YUPPIE in a
Pacer? Dave!!!!! truth@planetc.com

I dont think your wrong.I agree that it really bothers you.As far as studies go,well in all honesty I thought it was rather easy.In my book I never considered it an accomplishment.When people see my equipment most ask if its a cb radio.I try to educate them but most still view the ars as simply cb radio i.e. breaker breaker and rubber duckies!I believe thats what really bothers hams the most is they dont want the stigma of being "just a cb'er."
For example my wife,she knows what the difference is but she says the bands basically sound the same.Go figure!To a non ham or non cber they are the same!To each their own.

> Linus

I have a 79-290 and I like it. It's small but it barks and
it looks modern. There are a number of sites that have
channel bank charts for "export" radios. I suggest you
take a look at those and see if a "channelized" radio like
the 79-290 will suit your needs before you give up on it.
Just because the 79-290 won't cover every possible frequency,
that doesn't mean it's not a good choice. It's a tough,
powerful little radio that with the proper mods will keep
up with radios that are half again bigger and will look better
doing so. Those features are probably attracted you to it
in the first place.

It is simply amazing, the democomunists weren't getting enough Gore votes so now they want to change the rules and start allowing those where the ballot is just dimpled to count as a Gore vote, while at the same time they are trying to get most of the absentee ballots thrown out, especially those from military personnel as they are most likely Bush supporters. Ballots for Bush are being discovered in the Gore piles. These robbers will stoop to whatever is necessary to steal this election.

Greetings!

I don't know of anyone using a CM-10 personally, I do have a CBS-1000 though, and that is a story in itself...:-(.

If it's like any other radio, if it works out of the box, and you take care of it, it should work. But, if you're like me, and have to take radios apart and put them back together again just to see how they work, well, I'm going to have opinions...;-)

I just don't have an opinion on it.

On Sun, 19 Nov 2000 19:11:17 -0800, while the modem was pondering it's navel, "christopher" <chrism@centurytel.net> dissertated the following:

Source record: 59899

>Just because the 79-290 won't cover every possible frequency,
> that doesn't mean it's not a good choice.

Indeed, and I guess I was unclear in my comment. I do not need it to cover every possible frequency, I just don't know that it will cover the three or four I monitor on a constant basis... and so far, I haven't been able to find any sites that have channel listings like you mention here.
Coupling that uncertainty with the other comments regarding memory loss and such gave me enough reason to at least look for another contender. :-)
Linus

6091. "Pills" added to X force?

Newsgroup: rec.radio.cb
Date: 2000-11-20 07:48:58 UTC
From: maniac9188@aol.com
Message-ID: <20001120024858.24663.00000641@ng-cd1.aol.com>
Source record: 59900

I own an X-Force Amplifier model X60012. It is a 2 driving 6, with 2290's in the driver section. It is built on a 16 pill board, so I feel there is a lot of room to improve if I wanted to.. First, I must mention, that this amplifier has: Variable Power, the Biasing circuit installed; along with the Recieve Amplifier, the Sideband Delay, and the larger power leads (1--10ga, for the driver section.., and 3--8ga, for the other 6). I was thinking at first, that I wanted to add only 2 transistors to the final section, (making it a 2X8). Now that I have my new-and-improved electrical system in place, I was thinking of uprading to 4) 2sc2290's for the driver section, and 10) 2sc2879's for the final section. Would this at all be possible? Because I have never heard of this configuration inside of one box before....
Thanks..

Maniac..

OR, they could be afraid that the hand recounts will MANUFACTURE votes or DISQUALIFY votes for one side or the other. Due to the wide variability of manual recounts, it would be very easy to commit vote fraud.

It is always the person who is trailing in a close election who asks for hand recounts. The person who has the lead would never ask for a recount. That is just common sense. The Bush team must suspect that Gore got more votes than they thought, otherwise they wouldn't be afraid of a recount. But either way, candidates have traditionally requested (and have gotten) hand recounts whenever elections are this close. This is nothing new.

These hand recounts are under much more scrutiny than either the first machine tabulation or the second one. It would have been much easier to commit "mischief" during the machine counts. At this stage of the game (with all the public scrutiny on the process) it is unlikely that anyone would risk prison time by commiting fraud, when they are much more likely to get caught.

Don't bet on it. There are plenty of people that went to jail to cover for
the Clintong administration's shenanigans.

You can also go from pin 4 on the back of the mic plug to board ground
through a 65 - 150 ohm resistor.

This is incorrect information, while a ham may build any number of amplifiers a year for his own use if each is of a different design, or modify 1 Certified amp a year. Non certified amps (Read used for CB) may NOT be modified for amateur use.

The requirements are spelled out in detail in FCC Regulations 97.315 and 97.317

"Skipp" <skipp@pilot.ucdavis.edu> wrote in message news:8veboh$f6d$3@mark.ucdavis.edu...

No you are also wrong, there is in fact skip because there is a skip zone. I would suggest you go read the propagation section in the ARRL literature, and also ask on the antenna news group or the VHF-UHF news group. You can also read my prior post to Stevarino, where I reference the relevant section from the 1999 ARRL handbook. I would agree that tropo is not true skip, however there are conditions where it does occur. It is really amazing that people simply assume that once you cross that magic mark of 30MHz that skip can't happen. The 30MHz mark is not like a light switch, below which you get skip, and above you don't. It does not work that way now, and never has work that way in the past. You want people to believe that a 6m VHF contact, from Detroit to Chile, was not "skip", but tropo! Give me a break, I know better than that, and so do some of the CBers on this news group too.

Now if you want to discuss propagation prediction that would be a different subject. I would fully agree with you that V/UHF skip is not as regular, or dependable as HF skip. In this case we would be commenting on who frequently V/UHF skip occurs, not if there is any such thing, because there is.

> the band itself.

My comments are not "ridiculous", but are a logical extension of the mess on 11m, which is being duplicated on the FRS bands, with radio modifications, and there has been talk about amplifiers too. Don't believe me, then go check it out for yourself. The people on the FRS news group are having a hard time keeping the idiots wanting to post illegal FRS radio modifications, and other things, off the news group. The same kind of people found on 11m, operating illegaly, and now showing up on FRS will sooner or later populate MURS when it is license free. To expect these people to NOT engage in the same behavior, just because it is VHF, is foolish.

> I think Stevarinos point was that skip is highly unlikely

No thinking required MR. Johnson, he VERY plainly stated there is not such thing as VHF skip. You would be better off going back and reading his post.

> on these bands because most of the time and expense adding output power
> would be for naught.

Except when the bands open, then you MAY need to run an amplifier for exactly the same reasons they do on HF, to get just above the noise floor to complete a contact.

> People like myself who have operated on VHF for many
> years know quite well that if a Tropo band opening takes place it doesnt
> much matter if you are running 5 watts or 50 watts because Mother Nature
is
> doing the leg work for you.

And when there is a weak sporadic E opening, weak Aurora, you need the power to get a good signal through, just like HF. You would also have me believe that you don't punch up the power to get in to a remote repeater from time to time? If Mother Nature is doing the leg work for you, then you would zero need for using anything more than 5 watts at any time would you on VHF?

> Contrast this with 11 meters where power is the thing to have because you
> are competeing with other power stations on frequencies like 27.025.

And you really don't expect that to NOT happen on MURS when some moron wants to talk over the other moron down the street? We are not talking about physics here, we talking about people, and what they will do to get want they want. As you pointed out they already do it on 11m, run amplifiers, and not always to work Dx either.

> The
> radiowaves themselves have a predicted path based on the time of day and

Excuse me, try connecting an amplifier to YOUR CB, and then tell the FCC field engineer its not your fault, and see how far that gets you with the judge in court. 8-))

> if you leave a kid alone in a candy store, the kid will
> most likely eat some candy.

Then don't take them to the candy store and leave them alone.

> The FCC is the one to blame because they were
> the ones that allowed CB use on the 11 meter band over 40 years ago.

With the creation of FRS, and now MURS license free, they may be fixing to try and correct that mistake. I would not be suprised at some point where the FCC throws in the towel, and pulls the plug on 11m CB completely.

> If the

> They are in no way more prone to US SSB interference than their
> own freebanders.

Under some conditions I would agree that is true. As I mentioned last time the situation is more complex. I'm sure you have had experiences where you had a strong DX signal at your QTH where another station a few hundred miles away may not even hear it, he maybe in the skip zone.

> How could you say with a straight face that the UK is
> prone to US freebanders' interference as opposed to their own?

And why should it be any less?

> I would
> guesstimate that over 90% of their interference has NOTHING to do with
> US ops.

And "IF" that was true, that's still 10% more than they need to put up with don't you think? Why should anyone on this side of the pond need to add to their problems?

For some on this news group it sure seems to be.

> Again, Leland, I think you would be hard pressed to
> find a regular

Did not take long to find one to claim there is no such thing as VHF skip. Even more surprising to find another Ham who does not know about it either. Its even more strange when the study materials for the exams cover this area, such as the ARRL handbook, and the V/UHF handbook published by the RSGB. That last book goes in to detail about VHF skip, good reading, and you might learn a thing or two about VHF skip from it.

> on this newsgroup who couldn't teach you a thing or two
> about the same things you tend to profess, and you act like this is all
> some new revelation. It isn't.

For some on this news group it is because they didn't consider the wider aspect of the consequences of their operations.

> How about the hundreds of countries that
> don't adhere to your rules and regs? How about all those businesses
> (taxi cabs in S. America, Mexico, RAILROADS, etc.) that are unlicensed

> the wrong way again!

I feel like I'm talking to a little kid who says he wants to do it because everybody else is doing it too. Your logic suggests that's OK? So what do you propose to do? We have countries which sponsors a group that blows up a bus load of school kids, plane high-jackings, drug trafficking etc. By your logic this country should do the same thing, and we can take the concept of the rule of law, and throw it in the dumper while we are at it. We can then excuse our actions because everyone else is doing it too.

>
> "...the modes are not compatible...'

> Neither is 20 meter when we were referring to the eleven and freeband
> area up to ten meter, So your statement implying a comparison between
> the two is not true!

Well lets just say up here in Detroit I have heard stations from down south and out west wash out local CB stations in this area. I have also hear DX stations on 10m at signal levels that covered up local stations this past weekend during the contest. It all depends on where you are in relation to the skip zone. Skip zones happen on 20m, and they happen on 10m, just like they do on 11m.

Yeah, sure. A smoker says "I can quit any day, I just don't feel like it".
Full legal limit from a good linear on ANY HF band - CB?? C'mon, Tim.
i can garuantee you i know more about my radios, antennas, and
> propagation than 90% of the appliance operators on 20 meters. dont think
we all
> wish he could be on the ham bands because were busy laughing at them not
> lusting over them.
> Looks like most hams on twenty are incompetent, then, eh? What's going to
happen to your eleven meters in two or three years? Can you work meteor
scatter on your CB "freeband"? Think about it - many of my CB friends have
gotten rid of the illegal stuff and gone straight - hi, hi - to ham radio.
No more hiding in the basement. BTW: if you're so close to the FCC building
in Houston, I wonder what your beams look like? I took my first ticket in
1988 and upgraded to extra a few years later - how about doing something
meaningful on CB? Can you understand why you can e.g. copy someone with a
really fast QSB signal on ssb? What about the "watery" sound of some
Pennsylvania stations on a cool winter nite? Or are you satisfied with just
pushing the PTT and letting the others do the thinking, Tim? Be frank - I
am. Gary - or Kari, if you like, my American ham friends find it difficult
to pronounce my Finnish name, hence the nick...

"..the UK cbers don't seem to think so..."

And if you go to an Iranian site, they think we're a nation full of devils...So what..since when does one worry about what another "thinks"? I've been on the air for years and years, probably longer than you, and I have yet to encounter a European operator complaining about US ops interfering with them. I am certain that if one goes looking for an argument, one certainly find it...hence you alluding to the UK cber site.

Of course I've had international stations bury the needle as opposed to domestic stations...again..so what...that is the exception to the rule, not the norm.

Your argument goes both ways..ridiculous...but nevertheless..two sides to every coin. Why should we on this side of the pond have to put up with European freebanders? Answer: We don't. And neither do they. Thats what the channel and band selector switch is for. Geez, I am still amazed that you put so much effort into condemning what you have absolutely no control over whatsoever.

"..did not take long..'"

As I stated earlier, seek hard enough and ye shall find.

No surprise at all to find some hammies that don't know squat! I'm truly amazed at your logic of thinking that the hammies know all.

Your comparisons are apples and oranges. No violence in Dxing and freebanding as opposed to what you compared it to. You are losing ground quickly here.

Leland...this country DID do the same thing.They could give a rats behind about someone bleeding you from the freeband...unless you can prove wanton and malicious interference, all you're gonna get for your efforts is a token letter acknowledging the complaint.

Well, as most of you have noticed, the CB City Website is no more.

After 6 years of hard work and dedication to a very greedy and ungrateful man (Leon Carter-owner) decided to fire me after standing up for another employee. I am sorry, but I do not feel that anyone should put up with being called "A Lazy Mother f---er" in the work place by their boss. Me and him locked horns on this matter as well as him jumping on me for working on the website so much and he fired me on the spot.

I was also the manager, technician, website creator and manager. Anyway, I am very sorry that the website is no longer there for you, but I was not about to give this man my hard work and dedication that I had devoted so much time to doing. I wish that everyone who reads this would call and lodge their complaints to them at 1-800-582-0426 just to let them know how valuable I actually was.

Again, I am deepely sorry.

If you have any comments, suggestions, job openings, complaints or whatever, please email me at "deanntx@tyler.net"

Goodbye Everyone

Happy Thanksgiving and Have a Merry Christmas

From: MC Turner <C_Turner@ix.netcom.com>
Message-ID: <8vdap5oaq1@nntp9.atl.mindspring.net>
Source record: 60048

I have a few of both of those units. I collect JB gear.

The 75 unit is a a low power unit. They work great if you have an old stock tube radio that does 4 watts. Set the dead key at 4-5 watts and it should swing 50-70 watts of audio. Do not turn the carrier up to high. Remember that they are modulators and not Amps. They are not realy designed to increase carrier much.

The 150 unit is the more desirable unit. It uses a single 8417 tube. Sylvania Green works the best. yellow is allso a good tube. They do not like GE tubes. RCA can be used but its a step down from the Green or yellow sylvania tubes. Set this unit at 10-15 watts keyup and it should swing to at least 100 watts. A unit with a perfect tube will do 150 peak.

Both units do NOT need or like alot of drive. If your radio is clipped or the modulation is tuned up put it back stock. Only a few watts of drive past carrier is needed to make them modulate. Running a radio that swings 18-25 watts is a sure way to kill the tubes. tons of peak is just NOT needed. If you have a stock radio that does 90-100% modulation and run it into either of these units you will get nice loud and clean audio.

I use a JB 200b everyday. I run a bone stock never been touched Johnson 223 with stock desk mic. The radio is a real puss and keys 4 and swings 12 peak. But.. Into the Jb it keys up 20-30 and swings 200 peak with NO clipping at all on my scope. People describe it as studio type audio.

If run the way I have outlined the JB units will last a long time and will not cause huge amounts of interference with the people next door. Dont push them and dont expect to much from them and they will provide years of great audio.

ANY SSB received within the bandwidth of an FM channel will break
through the squelch as an annoying noise. It doesn't matter where it
came from. When your S-meter is swingly wildly between S3 and +20 with
waawaahoooowaawaa noise you might as well switch off.

CB is mostly absolutely unusable these days in the UK.
If those freebanders could at least give us 10 channels or so clear
of crud we could get some use from our rigs.

From: pff46@my-deja.com
Message-ID: <8vdmhr$8li$1@nnrp1.deja.com>
Source record: 60053

Hopefully by now everybody has the frequency
of Phila PFF Radio - if you don't, it's 452.725
PL 203.5. We are the Delaware Valley's only NEWS
& Fire Notification Network and we are sponsored
by a few Major News Networks. Any time of the
day,if something major/newsworthy happens in the
Delaware Valley, chances are great you will hear
it on PFF Radio!
We now have 35 dispatchers scattered
throughout the Phila., SEPA and SNJ area. If you
have any interest in public safety radio, & would
like to jump in on the fun, just email me at PF-
71@webtv.net .
We are a FREE service - all you need is a
UHF 2-way radio. Give us a listen, alot of our
members are responding to the scenes of incidents
(we usually have multiple people covering an
incident from all angles).

6144. NOTICE OF REVOCATION OF INDEPENDENCE

Newsgroup: rec.radio.cb
Date: 2000-11-21 00:00:00 UTC
From: damn_it@my-deja.com
Message-ID: <8vdnhs$978$1@nnrp1.deja.com>
Source record: 60055

In the light of your failure to elect a President of the USA and thus to govern yourselves, we hereby give notice of the revocation of your independence, effective today.

Her Sovereign Majesty Queen Elizabeth II will resume monarchial duties over all states, commonwealths and other territories. Except Utah, which she does not fancy. Your new prime minister (The rt. hon. Tony Blair, MP for the 97.85% of you who have until now been unaware that there is a world outside your borders) will appoint a minister for America without the need for further elections. Congress and the Senate will be disbanded. A questionnaire will be circulated next year to determine whether any of you noticed.

To aid in the transition to a British Crown Dependency, the following rules are introduced with immediate effect:

1. You should look up "revocation" in the Oxford English Dictionary. Then look up "aluminium". Check the pronunciation guide. You will be amazed at just how wrongly you have been pronouncing it. Generally, you should
raise your vocabulary to acceptable levels. Look up "vocabulary". Using the same twenty seven words interspersed with filler noises such as "like" and "you know" is an unacceptable and inefficient form of communication. Look up
interspersed".
2. There is no such thing as "US English". We will let Microsoft know on your behalf.
3. You should learn to distinguish the English and Australian accents. It really isn't that hard.
4. Hollywood will be required occasionally to cast English actors as the good guys.
5. You should relearn your original national anthem, "God Save The Queen", but only after fully carrying out task 1. We would not want you to get confused and give up half way through.
6. You should stop playing American "football". There is only one kind of football. What you refer to as American "football" is not a very good game.
The 2.15% of you who are aware that there is a world outside your borders may have noticed that no one else plays "American" football. You will no longer be allowed to play it, and should instead play proper football. Initially, it would be best if you played with the girls. It is a difficult game. Those of you brave enough will, in time, be allowed to play rugby (which is similar to
American "football", but does not involve stopping for a rest every twenty seconds or wearing full kevlar body armour like poofters). We

are hoping to get together at least a US rugby sevens side by 2005.
7. You should declare war on Quebec and France, using nuclear weapons if they give you any merde. The 97.85% of you who were not aware that there is a world outside your borders should count yourselves lucky. The Russians have never been the bad guys. "Merde" is French for "shit".
8. July 4th is no longer a public holiday. November 8th will be a new national holiday, but only in England. It will be called "Indecisive Day".
9. All American cars are hereby banned. They are crap and it is for your own good. When we show you German cars, you will understand what we mean.
10. Please tell us who killed JFK. It's been driving us crazy.

Thank you for your cooperation.

i wouldnt recomend a 40 year old man do it if he had just studied a study guide and passed the test without any real working knowledge. not only should they not try to work on it they shouldnt use it. tubes would be bad in a day from mistuning. the test are really basic, they by no means make you knowledgeable in electronics or qaulified to work on radios.

Greetings!

If you could put this together in a kit, you'd have something...

One question, do you solder the tab of the regulator to the ground
plane section of the board?

The reason why I ask is due to noise and dressing of the leads on the
PCB.

If you've got it in a kit form, I'm willing to try it, just need the
PCB to put it together.

Greetings!

Some old coax works real well for braid. Both the outer shield strands
and the center lead can be tied together and soldered to a lug
connector.

If you're real creative, just strip off the outer jacket and use some
simple chassis grease rubbed into the braid to protect the braid if
you have clearance or flexibiity problems.

I have a Demco Travalier, the complete, gaudy, chrome plated setup. I compare it to the 1950's cars with lotsa chrome and big fins.

Comes with CB unit itself, Demco accessory speaker, Demco Modulator, Demco Power supply, and D-104 Microphone.

Unit works fine.

300.00 plus shipping. It is worth it...ya dont find these rigs around without pits in the chrome, etc. This one still shines.

Email me at the address above.

Slightly off topic but somewhat radio related.

Is anybody else having problems trying to read the acrobat version of the MFJ Catalog that is downloadable from their website ? The fonts are blocky and very difficult to read. I can read any other acrobat document without trouble. If anybody has a solution, please drop me a line and don't forget to remove the "NOSPAM".

Thanks,

Richard.

> Hello again, Leland. Just because the UK is FM does not automatically
> imply that the US freebanders are imposing on them.

The modes are not compatible, FM and SSB. Unless you were able to contact a UK station using FM you really don't know. That is why there are band plans for the Ham radio bands. You don't operate SSB in the FM section, and you don't operate FM in the SSB section, or the CW section. The same applies to the digital modes. How would a FM only station talk to a SSB station to tell them there is a problem for example? The band plans exist so that stations using the same emission modes can easily check to see if a frequency is in use. That can only happen as long as stations using the same emission modes stick to their part of the band reserved for that mode. That way all stations at least can communicate with one another using the same mode, and work around other stations on the band.

I doubt most CBers understand why the bands are set up, offset as they are, and feel that they can transmit anywhere they can tune the radio. I doubt that many CBers even think about how their signal propagtes around the world when the band opens, and consider that their signal may not be welcomed everywhere it ends up.

> I tend to think that
> if anyone is causing problems for our friends in the UK it is their own
> operators who are pirating.

That is only one half of the problem. I have read the threads on the UK CB news group, and they do bitch about specifically American SSB signals on their FM channels. The also talk about how some operators get busted for unlicensed operations, and others for using AM/SSB radios. As you know when the band is open you can have strong signals over very long paths. Now combine that with high power and maybe directional gain antennas, you have a recipe for big problems.

> When you go to the freeband to "listen",
> Leland, who splashes you more?The operators here or the operators
> across the seas?

Well I will use my experience from monitoring 20m because at least the stations ID themselves so you know where they are. I have more than once heard stations from Europe, and the middle east, that buried stations here in the US. It of course depends on the equipment used on each end, and the propagation conditions, which change all the time. So your question was meant to imply that a state side station "splashes" more is not really true. The real situation is much more complicated than that. That's why on the Ham

bands stations need to be able to communicate with one another to avoid stepping on each other. On SSB it a good practice to "ask" if a frequency is in use before jumping in and yacking away because there may be a nearby station working a really weak station you may not be able to hear.

> Same over there. I can't even remember an operator
> overseas who interfered, splashed, or bled me to the point of actually

I was only kidding about a raid - why would any CB station be worried about if a FCC vehicle drove down their street, stopping by their front door... Nothing - they're braindead. Wouldn't it be great to have call like NZ4J, like my Finnish friend, who incidentally passed all the ham exams on a single day. Ended up in extra class. Didn't even think of buying himself modified a CB rig. If he, a stupid Finn, could do all the classes all at once, why wouldn't the classy pirate CBers reading this ng be able to do so? Anyone? Tim? Or are you just playing with your toys, wishing to understand something about radio or propagation? Here's the mike back to you, losers. Gary

Just another example that you so conveniently provided Tim of your attitude which continues to demonstrate your disregard for established rules. It does not matter what is "widely accepted", it is still their, UK, FM band, and SSTV signals don't belong there. Why don't you go to the UK CB news group and explain to them why you feel you have a "special privilege" to run SST on their FM channels.

The only reason you would want to put me in a kill file is because you have no legitimate legal reason do what you do, and when I point it out it makes you feel uncomfortable. The more you try to rationalize your actions the more you demonstrate an attitude that laws don't apply to you. The jails in this country are full of people who think just like that. I'm sure that if you ever get mugged on the street the mugger would have rationalize why it was OK, and why he should not go to jail. Hey, he was poor, hungry, cold, no place to sleep, had no money, and your not going to miss a few bucks. Lock him up, throw away the key, and case closed.

does anyone know how to install talk-back in the 29 without using an external speaker with talk-back
i know it has something to do with soldering a resistor somewhere near the speaker contacts????

Cap'n,

YUP! 'Fraid so! My 8th grade teacher had a Nash in 1962. We used to tease her (she was a KNOCKOUT, BTW) by doing the Nash Rambler Song. (Beep, Beep. Beep, Beep....I pushed my foot down to the floor to give that guy the shake.......I'll show him that a Cadillac is not a car to scorn!) It was her Nash that I and another 8th grader were fuming over because it was difficult to get the tire out from under those non-existent fenders. LOL!

Later,

Jerry

"> I was there when a contact was made from eastern PA to CT. First it was done
> on 6 meters, and about an hour later, on 2 meters to the same station.

None of the previous posters comments said that long distance VHF traffic wasnt possible, all he said is that long distance VHF traffic is not called skip. He's absolutely correct. There is no such thing as VHF skip. Skip is skywave propagation that uses the E layer and the F layers of the ionosphere on a pre-predicted schedule based on annual solar flux standard deviations. Skip is also dependant on the sunspot cycles, time of day, time of year, grey line, and the path of the radiowave itself. Long distance VHF propagation (when it is available) primarily uses the Troposphere and the use of such is based on cold/warm air masses which are almost impossible to predict in advance because cold air masses are constanly changing. In addition, when a "band opening" happens on VHF no one knows where the DX is going to come from or to, unlike HF. There is also EME, Satellite, and Meteor propagation on VHF however these too are still not called skip because these objects are used as a reflector to bounce the signal to a location, which still doesnt qualify as skip.There is however some sporadic E VHF probagation however it is just that "sporadic".

I think the original intent of the "Stevarino" posting was to combat Lelands statements about CBers eventually wanting more power on the MURS bands which I agree with Stevarino. A comment such as Lelands is riduclous becuase it is based on his pure personal speculation without any hard facts. He is naturally ASSUMING that because 11 meters has become a furtile ground for amplifier bandits that the same thing will happen on 2 meter MURS.There is absolutely no incentive to use high power on VHF because of the physics of the band itself. I think Stevarinos point was that skip is highly unlikely on these bands because most of the time and expense adding output power would be for naught. People like myself who have operated on VHF for many years know quite well that if a Tropo band opening takes place it doesnt much matter if you are running 5 watts or 50 watts because Mother Nature is doing the leg work for you.

Contrast this with 11 meters where power is the thing to have because you are competeing with other power stations on frequencies like 27.025. The radiowaves themselves have a predicted path based on the time of day and because of the wavelength being used. CBers are not the ones to blame for excess power because if you leave a kid alone in a candy store, the kid will most likely eat some candy. The FCC is the one to blame because they were the ones that allowed CB use on the 11 meter band over 40 years ago. If the FCC had originally stuck to their guns and kept CB on VHF (where it was in the late 1940's) the problem of excessive amplification would not exist today. Lets also not forget about the Hams who in the mid 1960s were

selling and profiting from converted Ham amplifiers for CB use.

6181. Re: Legal Question

Newsgroup: rec.radio.cb
Date: 2000-11-21 00:00:00 UTC
From: Skipp <skipp@pilot.ucdavis.edu>
Message-ID: <8veboh$f6d$3@mark.ucdavis.edu>
Source record: 60092

Yes and no... You can sell it if it's labeled right and placed in the proper section of Ebay (ham transmitter). Any mention of CB or linear will probably get the auction closed down.

The proper way to label it would be a mobile solid state HF amplifier with 150 (or your amps value) watt output (don't mention the input drive power level). You can mention the amplifier is for qrp operation I think...

Amplifiers which are sold and used for CB band can be legally used in other services and frequency ranges. You just have to be clear the amplifier is not for legal sale or use in the CB band.

Then try to sell it to someone who's going to use it for legal ham operation (or at least tell you that). Otherwise, rec.radio.swap is a non moderated news group where that sort of thing is often done.

I'd sell it... the amplifier is a dirty thing in operation anyway...

cheers

And therein lies the semantics we are disputing. You said ANY ssb signal received, and again, my contention is the cbers in the UK are not receiving our signals, at least not in the interference fashion you imply. They are in no way more prone to US SSB interference than their own freebanders. How could you say with a straight face that the UK is prone to US freebanders' interference as opposed to their own? I would guesstimate that over 90% of their interference has NOTHING to do with US ops.

..."I doubt cbers understand...." is exactly the type statement that you keep losing credibility with. You act as if all this propagation information is new. Again, Leland, I think you would be hard pressed to find a regular on this newsgroup who couldn't teach you a thing or two about the same things you tend to profess, and you act like this is all some new revelation. It isn't. How about the hundreds of countries that don't adhere to your rules and regs? How about all those businesses (taxi cabs in S. America, Mexico, RAILROADS, etc.) that are unlicensed and have no regard for what is "supposed to be". You are seeking a needle in many haystacks, and you have pointed your proverbial finger the wrong way again!

"...the modes are not compatible...'

Neither is 20 meter when we were referring to the eleven and freeband area up to ten meter, So your statement implying a comparison between the two is not true!

Most normal people wouldn't. But think of another thing...how did the
"elite party people" become elite party people, other than by their daddies?
They had to do something to "earn" it, right?

I'm sure the Daley's weren't elite party people until they helped deliver
Illinois to JFK via vote fraud.

all you need is a miller mig welder, miller plasma cutter and some 1/4
inch plate. a drill press would be nice also,.......cd is out...

But the people who are counting these ballots are ordinary people. They are civil servants and volunteers. They are not elite party people. If they are party people at all, they are at the lowest possible level outside of the voters themselves. They are not the kind of people who are willing to do prison time just to give Gore a few extra votes which may not carry him over the top anyway. I wouldn't take a chance like that. Would you?

EarpluggerDX <delireus3@charter.net> wrote:
: I am getting an extreme amount of fuel pump noise in my 2000 F-150. I
: thought it was come through the power lead until I added a suppressor and
: nothing happened. When I grabbed the antenna it quit. So I know it is coming
: through the antenna. Any suggestions??

Contact the automobile dealership, and see if they have a noise suppression
kit for that particular model of vehicle.

Fuel pumps are generally located inside the metal fuel tank - so noise
would have to be carried on the power leads for the pump.

Try Wrangler. They make a larger case Nipon Denso alternator that is a bolt in for most Toyota's. My friend has a wrangler 165 amp unit in his Toyota previa that runs his 123 built 8pill. Its been in there for at least a year or two with NO problems at all. It runs 15 volts at idle(750rpm) and with 110 amps. At 1500 rpm you have 170 amps as tested. It really is a nice unit.

Skip is
> skywave propagation that uses the E layer and the F layers of the
ionosphere

This can happen up to 150MHz and slightly higher. The "bounce" off the sky means that there is a zone "skipped" in between the normal range and the distant reception. SSB or FM mode is irrelevant.

Most 144/430 MHz stuff that is longer than usual range is via tropo though - lower atmoshere - no skipped zone.

> If the FCC had originally stuck to their guns and kept CB on VHF
(where it was in
> the late 1940's)
It was 460-470 back then. UHF.

I understand. Too bad many on this news group don't. Some of the posters on this side of the pond would very much like to have people believe 90% or more of your problems with SSB, on the FM channels, is caused by UK operations on SSB. For some reason these posters don't understand when the band is open they can be transmitting a rock crushing SSB signal in to the UK, and not really know it. Some of these people will never believe they are causing problems until they are almost clubbed to death with the news, and then maybe not even then.

Yeah, right, I don't think so. I know a CBer who has been "personally visited" twice by a FCC field engineer at his home. He was using a modified Ham HF rig on 11m. The first time he got a warning. The second time he lost some expensive equipment. He's not on the air now, and myself and a few other Hams, that know him personally, have offered to help him get his Ham ticket. So far he has resisted the idea, and we have really tried to be helpful too. He knows what's going to happen if they show up a third time. So if he gets on the air a third time the FCC is going to make sure he remembers it for a very long time, and they are NOT joking. The FCC may not currently have a large enforcement group, but when they do show up, you will remember it, they will make sure of that. He thinks he's playing a game with the FCC, BUT the FCC does not play games, they are dead serious. I hope he does not tempt fate a third time to discover that fact.

Gee....I wish I was as high and mighty as all the
Geritol swilling, decrepid ham operating geezers,
and their robotic future geezer counterparts. I swear they sit
up at night after they get done complaining about
their health to anyone in the ham bands that will
listen, and study the big FCC Bible so they can
spew forth chapter and verse to all of us lowly CB
maggots.
You hammers think we REALLY give a rats ass about
operating out of the assigned frequencies?
You think we REALLY care that the amp we run is
illegal?
You think we REALLY care about breaking the distance
limitation on shooting skip?
You think we REALLY care about you're opinion?
Yea right.
I don't know of one Cb'er that doesn't know what he
is doing is illegal. I also don't know of one who cares
what he/she is doing is illegal. I also don't know of
anyone with the exception of one person in twenty years
that the FCC ever did anything to in my local area
for violations, and then they only took his equipment,
levied a $17,000 fine against him, and then told him
he didn't have to pay it because he didn't have any money.
(Though he was a real flamer and should have had to pay.)
What we need is a moderated CB Newsgroup where there
is somone to play god to the group and make sure that none
of the unwanted, unnecessary ham operater garbage falls
thru the cracks so that we never have to see any more
of the unwanted opinions of you jerks.
It used to be years ago that it was nice to have a ham around
for technical advise, but there are a lot of CB'ers now that
are just as technically educated as the hams to give
forth information plain and simple without a bunch of garbage.
The Phoneman

PS>Ok fellow Cb'ers.....Ham troll check. All the flames I get
for this post would no doubt be from the very sort of ham trash
that I am talking about.

I'm not alluding to anything, in fact here is the group:

uk.rec.radio.cb

You can tell the nice people there you don't care what they think about SSB signals form the US side on their FM channels. I would really like to see you post something there along the line of "if you don't like the interference then switch channels", and see how far that gets you.

> Of course I've had international stations bury the needle as opposed to
> domestic stations...again..so what...that is the exception to the rule,
> not the norm.

Well that's different. Just a while ago you where trying to imply that does not happen. Now its does? Can you please make up you mind.

> Your argument goes both ways..ridiculous...but nevertheless..two sides
> to every coin.

Thats right it does go both ways, which is logical, not ridiculous.

> Why should we on this side of the pond have to put up
> with European freebanders? Answer: We don't. And neither do they.

Thats right. Neither side needs to put up with it. There would be no need to put up with anything as long as operations stay on the assigned channels.

> Thats what the channel and band selector switch is for.

No that's what the WARC does every few years or so. The world wide allocations of spectrum is done to avoid interference between regions, and services. But that ONLY works so long as operations stick to the frequencies that are assigned to a particular service. In fact at the up coming WARC the Ham 40m band may get moved just to get rid of the international broadcasting found within the current band limits.

> Geez, I am still
> amazed that you put so much effort into condemning what you have
> absolutely no control over whatsoever.

You don't have any control over what I post, so why are you wasting your time condemning what you have absolutely no control over whatsoever?

Apparently these same 9 year old kids know a hell of a lot more than you do.

"Leland C. Scott" KC8LDO <no-spam@junk-mail.net> then wrote in message on rec.radio.cb news:t18m2ot9rh3458@corp.supernews.com...

> All it proves is they can memorize a bunch of answers to a list of
> questions. As I pointed out, in a prior post ,this is the single biggest
> problem with those exams.

You have to be a complete idiot. First you promote the fact that there are 9 year old kids that have extra class licenses. Then in a latter posting you basically say that all those 9 year olds did to get their licenses was to memorize the content in order to get the license, which really doesnt mean a thing about what they truly can comprehend because of the fact that they are only 9 years old. ATTENTION; ATTENTION; Earth calling Leland: Memorization is the key to understanding what one is trying to memorize.

How come you cant memorize the same stuff these 9 year old kids are memorizing in order to get your extra ticket? You condemn CB and promote Amateur radio yet you dont even have "the right stuff" to go out and excel in the hobby you are promoting so vigorously. Are you going to stay at the bottom of the amateur radio rung forever? Whats holding you back Mr. Would-Be Extra?

Now you get to answer one for me, Meg. Why the offset? Why 27.7 and an eighth?

Agreed that SSB would drive the usual FM detector mildly bugfucky with not a lot of chance to determine its source, it would also seem that Antique Modulation would not be a totally pleasant experience either.

Jerry, interesting that you would have so much more damage inland in North Carolina than we had along the beach here in South Carolina. I guess our hurricane planning did pay off after all.

Obviously, there was severe damamge to homes and property along the coast in Myrtle Beach. But, once you got three or four blocks inland from the ocean, there was hardly any damage other than the occasional tree down, damaged store sign, or power line damaged by falling branches.

Only two of the five local repeaters went down (three run on batteries charged with solar cells). We did loose our phones for a day and a half. Water had been turned off for a day (turned on after valves were closed isolating the damaged beach areas). And I really don't see how you lost power for three weeks (it was off here for only three days).

In my neighborhood, about a quarter mile from the ocean, only one house lost some shingles and there were about five trees down. One tree in my backyard fell, but it always had weak roots (sandy soil). But, other then the trees down, and lost shingles, there was nothing to even suggest that a hurricane had come through.

Most stores, gas stations, and other businesses in the area, were open within three or four days (as soon as power was restored to that area). And most residents were back to work in that same time period.

Again, along the beach it was a different story. When we went down to the beach the next morning, there was hardly a house still standing, the piers were gone, several large hotels were badly damaged (huge cracks), and there was heavy erosion (sections of several roads were completely gone). And it did take some time for the beach areas to get water, power, phone, and other services, restored (and a lot longer to rebuild the damaged structures).

On a humorious note, it did take the county two weeks to find all of the two dozen alligators that got away from the nearby state park.

Phoneman,
There's a very simple solution to most of your complaints. If you don't like what you are hearing, listen some place else. I do agree, always hearing about someone's health problems isn't the most enjoyable thing, but who says you have to?
Most conversations I hear are about things that are of interest to the people doing the talking. If that's about their health problems, or radios, or what their dog did this afternoon, then what's wrong with that?
I can see how you may not like to be reminded of some things that are illegal, but do ~all~ of us tell you that? I don't think so. As far as I'm concerned, your operating habits are your concern, unless it affects me in some way. I think that's the 'average' feelings of most people on the CB NG, doesn't make any difference if they happen to have a ham license, or not.
Since your feelings seem so vehement, it tends to make me think that there is more to it than your telling us. I don't have any idea of what that reason may be, but I do think it's getting in your way of looking at all this objectively. Saying that ~all~ hams have the same attitude is just as silly as saying that ~all~ CB'ers have the same attitude. At the very best, it's only correct in a small percentage of cases.
So, if you consider this a 'flame', well, so be it. It isn't meant that way, though. I hope you get your problems worked out.
'Doc

Leland, that's NOT what I posted and you know it. What I did say, was that I'll lay odds that over 90% of the UK interference on FM is due to stations OTHER than the US. You are implying that the entire world is not taken into consideration for interference, only the US. Go back and reread what I said, even though I have a feeling you know exactly what I stated. When in doubt, attempt to confuse or put words in one's mouth, eh Leland?

Source record: 60137

Nope! Once again, never implied anything, just stating the facts of the matter and I will reiterate for you once again, it is the exception to the rule, not the norm.My mind always was madeup. You just can't comprehend that man made laws against nature that don't work.

The argument does go both ways, only yours is ludicrous.

"...which has nothing to do with radio....."

Thank You! You finally learned something. I said that in response to your comparing freebanding to terrorism and violence....again..nothing to do with radio. Make up YOUR mind, Leland. Are we using the odd comparisons to radio or not? You wrongfully and firstly attempted an incorrect analogy and I ended up having you correct yourself! You're welcome!

The rarely have a problem with someone intentionally interupting a conversation..unless I go looking for it..such as 555. Again...seek and ye shall find. I have no interest in FM cb. Why would I want to go to the UK radio group? Are you talking on UK FM, Leland? If not, why are you pointing to the group? Oh, I know, you troll there as well.

Not only may the 40 meter band get moved, you guys may lose more spectrum to auction!

The only thing I condemn in here is your holier-than-thou attitude and attempt at being a radio security guard. A couple of members from a select group decided they were gonna "self police" 555. They were warned about it, didn't heed it, and lost the frequency to some idiot that makes it his sole objective to jam it and call it his own. Sure, I said something about it. Then I changed the dial. Problem solved. Which frequency do YOU want policed , Leland?

6231. Re: Swan 1011 schematic needed

Message-ID: <8vgs03qks1@mark.ucdavis.edu>
Source record: 60138

The manual and diagram I have set up for down load on my
http://sonic.ucdavis.edu server Amateur Radio Pages is for the Siltronix
1011D version. Not a lot different from the 1011 "B and C" rigs.

Should one actually have the original Swan 1011, mention of a vender
selling copies of the original manuals is also made on my Siltronix web
page. Grace was still in very active business when I spoke with her about
2 weeks ago.

I've been inside most all models of the Swan 1011 and Siltronix rigs. I
think they're close enough in construction that I could fix most things
with a generic (one of the model's) diagram.

Slight differences that most any good tech can work around. You didn't
mention what the differences were. My web page has the B, C and D model
differences listed.

cheers
skipp

I would have to say a Pathetic, lonely, Individual who has nothing better to do but to harrass CB'ers and try to impress us with his (what he thinks is) infinate knowledge. The Truth is, he's just pissed because he is lacking the rescources, or money to be able to even get his name called on channel 19 on a Sunday. He's unable to impress his fellow HAMBOs, or they laugh him off of the frequency. So Mr. Scott gets pissed about that and resorts to harassing the NG because this is the only place he won't get his lips cut off!!! PAIN&#65533; is GONE.....

I was looking through a box of stuff I got at an auction, this was in a bunch of CB stuff. Here is an explaination the front says 326-G Digital Controller, it has digital readout,lo/high,fine/course,standbye and on switches. Also on the back it has freq. adjustments and a switch with 5 different postions. It has a GM symbol on the front and says on the back. Glen Mfg.
Anyone know what this is for ? Is it like a freq. counter ?
Thanks,
Speedy

I just got done building a box with 4 - 455s in it . The box is doing
350 swinging to 650 running 14 volts , so the box works fine .
But the strange thing is that it doesn't want any capacitance at all
across the output transformers . I ended up using a 680pf cap on each of
the input transformers , like you normally would . But the power drops
way down if I use any caps at all on the output transformers . This
seems very odd to me . Does anybody have any suggestions on this ?
The only thing I did different from normal box building techniques
was that I used regular copper building wire to wind both the input and
output transformers .

THANKS
BENZ

> Saying that
>~all~ hams have the same attitude is just as silly as saying
>that ~all~ CB'ers have the same attitude.

Very true, Doc. But notice, he already said that all CBers DO have the same attitude, namely, that NONE of them care about hams, NONE of them (he 'doesn't know ONE CBer', right?) cares about the illegality of what they're ALL doing (another blanket statement implying that every CBer is a criminal and revels in it)... so as right as you are, that line of logic won't make any impact, since apparently he believes wholeheartedly in such baseless generalizations.
I'm with you on this one, and this guy's in that 'small percentage' of cases you mentioned, and as is typical of that breed, he thinks he's the rule rather than the exception.
Linus

Gary, Kari, Whatever,

Like you, I am a ham. But I use CB also, and I use it legally. Some of us come here to try to make friends, give the view of things from the "amateur" point of view, and stay away from the controversial stuff. You are making it difficult for the rest of us, and Amateur Radio in general by coming in here and stirring up anger and strife. I know you can't seem to resist agging everybody on, but I really wish you would quit it. With all due respect, and assuming you ARE in Finland, the actions of domestic CBers and the reactions of FCC are not within your purvey. I merely ask that you refrain from causing further resentment against Amateur Radio by ceasing all this mocking, disdain, and strife on the boards. You are causing harm and doing other hams NO good with this.

Respectful 73,

Jerry

Dwight,

Believe me, it was a shock to us, too! Never in our lifetimes had a hurricane roared 200 miles inland with winds of 85MPH sustained and 97+ gusts! We simply were not prepared for that, which is why there was so much damage. Dwight, it looked like someone had dropped a bomb in my neighborhood. Huge piles of debris were nearly head high, giant trees went over like toothpicks, leaving huge, deep holes where their roots were pulled up along with the soil. Some holes were 10 feet deep. I had a huge white pine in the front yard which went over effectively blocking any egress from my neighborhood. Powerlines were twisted round each other and poles snapped off. Live wires hissed and cracked in the streets. In fact, from my house, there were trees across the road as far as I could see and, since I am on a dead-end street, it was the only route out. My neighbors and I worked for three days trying to get out, literally cutting "tunnels" under the trees that fell over the road, but lodged in trees on the other side that didn't fall. I think I told you about the house near here where a huge oak fell thru it all the way down to the transom of the picture window--it all but split the house in two! Today, You can look at that house and never tell what happened.

Again, I think it was the lack of preparation for an event we thought "couldn't" happen 200 miles inland that made for the weeks of inconven-ience. Oh, the one thing that worked the whole time: the phones! I never understood how all those power lines could be down, and yet the phone still worked!

Hi,
I have been interested in radio most all my life and radio has been my hobby
for the last 24years, I have tried to
keep my Ego out of my hobby and sometimes thats very hard to do! I have
found if i do this i enjoy my hobby or radio the most. What i like about
radio is the quest for knowledge is endless and you can go as far in the
hobby as you choose to. A lot of radio operators have helped me so i have
tried to help others so they to can enjoy radio as much as i have, weather
it's SWL, CB. or HAM or other forms of radio. There is no difference in
radio operators, were all people and thats what i like most about radio is
the difference in opinions.....
It helps me see a bigger picture.and i thank YOU for
that.....73s OLDTIMER.

I cannot see how the box doesnt want any capacitance across the output transformer. Why did you use the 680's across the input? Did you just randomly use this or did you arrive at this value by tuning. The caps across the input transformer will tune your input swr so coming up with a arbitrary number of 680 without checking the input swr results is not good amp building techniques, the caps across the output need to be tuned as well for max output etc.. different guage wires used to wrap the transformer will result in different inductance values so different cap values need to be used . Why did you not use teflon wire?

I don't know what it is either , but I'll give ya ten bucks for it .
Just joking . It's a great digital vfo that you hook up to the old
crystal radios . I never got a manual for mine , but mine will go to any
frequency between 7 mhz and 54 mhz . I still don't know how to program
in the standby yet though .
When you turn it on it will show you the frequency on the readout .
It's simple to operate . just play with the knobs and switches until you
figure it out .

I did, you can't quote text from a prior post correctly. What you did above
was take a comment, to your "devils" statement, out of context and tried to
slip it in as a reply to another comment I made, hoping to alter the readers
perception of what was said.

So lets try that again. Here is the post as it appeared before your
"creative" editing.

> conversation..unless I go looking for it..such as 555. Again...seek and
> ye shall find. I have no interest in FM cb. Why would I want to go to
> the UK radio group?

Why not? You afraid to find out the truth how much the FM CBers, in the UK, like putting up with SSB signals on their channels?

> Are you talking on UK FM, Leland? If not, why are
> you pointing to the group?

Just to make it clear I'm not "alluding" to a nameless news group, so I pointed it out just for you.

> Not only may the 40 meter band get moved, you guys may lose more
> spectrum to auction!

Then again the FCC may get sick of the crap on 11m, and give it back to the Hams, who could make good use of it. After all there were a lot of up grades to general by those interested in HF.

> The only thing I condemn in here is your holier-than-thou attitude and
> attempt at being a radio security guard.

No, what really bothers you, and others here on the news group, is there is no rationalizing the fact that operating out of band, and runing illegal power can be logicaly, or legaly, excused. You really feel uncomfortable when somebody points it, and then get mad when you finally understand there is no defense for breaking the law.

> A couple of members from a
> select group decided they were gonna "self police" 555. They were warned
> about it, didn't heed it, and lost the frequency to some idiot that
> makes it his sole objective to jam it and call it his own.

Like that does not happen on the legal 40. If the people here spent the effort to help clean up CB radio as they do arguing why it should be left to idiots similar to the one you pointed out, things would turn around. There is a hard core group who's sole interest is keeping 11m screwed up.

> Sure, I said
> something about it. Then I changed the dial. Problem solved.

Until the guy on 555 switches his dial too. Where are you going to hide next? Is that what you call operating? Always running from the very idiots you are sticking up for on this news group, trying to get away from all the crap, you would figure sombody would get sick of that sooner or later.

> Which frequency do YOU want policed , Leland?

The same as the FCC, 11m.

I have a ford and had a lot of fuel pump noise i went to ford parts
department and they said they did not no of a solution, but in a CB mag i
found a Technical service bulletin NO.93-15 that covered a lot of ford cars
and trucks and ordered a serpressor for about 75dollors that i installed in
the tank and it took all the noise away.
hope this helps. OLDTIMER

So I will ask you the same question I already asked two others. Would YOU
recommend a 9 or 10 year Extra Class ham to stick their hands inside of a
high power tube amplifier to work on it unsupervised? That is what passing
the Extra Class exam implies they are qualified to do. Do you really think
they would know what they where doing?

Wrong again Leland! YOU were the one who FIRST compared another issue to radio..violence and terrorism...when I used an analogy that had nothing to do with radio, you called me on it, just like I did on you and therefore, you still, stand corrected.

Wrong AGAIN! I try to alter no readers view, unlike yourself. I could care less what certain folks think, others I trust, and I already KNOW you can't alter their views, unlike you, who apparently thinks so highly of himself that his posts are actually going to enlighten someone.

Now I know you don't read the posts.
I said I am NOT INTERESTED in FM UK cb radio, so why WOULD I go there? What part of that sentence can't you understand?

No one is mad at you Leland (at least I'm not). I do find you amusing though which is the only reason I bother to reply. The folks out here don'tt need an excuse to run the bands they do, and you want them to put up an argument so you can quote the law. We already know the law Leland..I guess you are projecting and the blatant disregard for it makes YOU mad.

I don't hide from anyone, Leland. If I hear something I don't like, I turn the dial. There is plenty of spectrum, so no, I don't have to hide. And yes, I once in awhile still tune in to 555 to listen to folks like you get a teeth full of corn from Bob! Entertaining? You betcha..for about 5 secs.

Show me one place where the Feds recently said they have any intenton of cleaning up 11 meter.

No, I simply used your logic to justify violence and terrorism. The same dumb illogic you and others use to justify ignoring the Part 95 rules as they apply to CB radio.

> Wrong AGAIN! I try to alter no readers view, unlike yourself. I could

You have some "special gift" that lets you read my mind? They have a name for that condition you know.

> Now I know you don't read the posts.
> I said I am NOT INTERESTED in FM UK cb radio, so why WOULD I go there?

Of course you don't, and you don't care about the problems they have stemming from out of band SSB signals either. Just another example of operate anyway you want and damn anybody who has a problem with it. Yeah I understand your point, typical CBer thinking.

]
> No one is mad at you Leland (at least I'm not). I do find you amusing

You try real hard don't you?

> The folks out here
> don'tt need an excuse to run the bands they do,

They will need to think of one by the time the FCC shows up. $10K is not exactly a small fine, even in todays dollars, and not counting the year or more of jail time one can "earn" too.

> and you want them to put
> up an argument so you can quote the law.

They can't, which is the point.

> We already know the law

Which is one less excuse you can use with the FCC.

And if and when this so called "CBr does, you will provide a link that
will back up your statement, right? Everyone knows how you want to be fair
and not lump everyone in the same "Bag", right? Just as I would never think
of judging all Hams because of the antics of a few "Pirates", like the ones
on 2 mtr, right? So, of course, you will provide a link so we can see the
"Proof" of your CBr/FCC "Story", right? I know this must have just been a
simple mistake on your part, not to provide the link this time, right,
Leland?

I don't know, but I hear the Fords have noisy fuel pumps that get into the receiver a bit. I do know that Toyotas are reliable, well built machines. I have almost 300k miles on my 87 pickup, and still going strong. Going for half a million!
I run about 700 watts no problem. Stock all the way.
Make sure everything is grounded REAL GOOD, and you should'nt have any computer problems.
The heads on here can give good advise on running your electrical.

Not sure what type of rig you have, but if its a car or truck mount a K40 on
the corner of the hood on the driver side a K40 has a quick disconnect 1/4
turn and its off and its bottom louded with a stainlles steel stinger
that holds up well if it gets banged around. The best cb radio for hearing
and transmit i like is the Grant XL with a D104m6b mike. 73s

I have one in my 2950 and i like it a lot it helps with bleedover and gives the incoming signels a fuller sound more like a HAM radio. 2950 radios have a lot of gain in them so when you add the CG filter they work out good, to install one in a SS3900 mite not work as well as a 2950 . OLDTIMER

6293. Re: PAL VFO guestions

Newsgroup: rec.radio.cb
Date: 2000-11-22 00:33:11 UTC
From: Skipp <skipp@pilot.ucdavis.edu>
Message-ID: <8vf487fh2@mark.ucdavis.edu>
Source record: 59990

Hi Jeff,

: Jeff Mayner <bk43@pacbell.net> wrote:
: 1) Is PAL still in business?

No

: 2) Is there a place on the web that I can get information on these units?

Not that I have seen. The only data I've seen on Pal VFO's was the
original advertisements which showed each VFO's version label - frequency
range.

: 3) I have a model "G". Any one know what specific radios this unit covers?

Only 23 channel rigs with the right freq synth section.

: 4) Are these various units radio specific or do they work with most 23 ch.
: radios?

Each vfo model had a frequency range which coresponded to the equivalent
mix crystal it replaced in the 23 channel radio. All radios with the same
synth sections used the same model vfo. There got to be about 5 to 10
different common mix setups, pal made vfo's for many of the popular ones.

: 5) How do you hook 'em up?

In the mix synth section, best done with an isolation toroid, resitors,
caps and and short shielded wire.

: Thanks for any help you can give.
: Thanks,
: Jeff Mayner
: Ventura, CA

cheers

Hi Fred,

You fail to mention that 26-50MHz amplifiers were once legal. I have a few that are certified for operation in adjacent services which may or may not be used anymore. I used to use them in legal operation for alarms and paging. That's why you see so many of those 4 tube sonar base units around. They were sold with low band paging systems quite a bit.

A Sonar BR-21 and similar era amplifiers are accepted for legal services.

Anyway, not to beat the messenger too bad... the amplifier can be sold as parts. Parts make up amplifiers... another grey line like our drug war. The sad part is that these newer reissue palomars are junk, often over rated and not filtered on the output. I'd rather have it going to a ham who might try to fix the thing right, than have a nut case working my vcr on Sunday, the rare time I get to watch San Francisco (49er's) beat Atlanta.

cheers
skipp

Message-ID: <8vf948$l0j$1@nnrp1.deja.com>
Source record: 59992

Do the variable pot on ModV burn out like the pots on other TS amps. when used to reduce the power out?

When using the pot to reduce power, does it reduce both the carrier and peak?

What carrier level does a ModV put out with the pot wide open and a 2-3 watt carrier from radio?

Selling it as a CB amp is illegal. Ebay is likely to terminate your auction prematurely. But it would be legal for a Ham to sell it as a Ham amplifier.

: Fit a 1 micro farad suppressor across the power leads into the pump.
: Thats cured any pump noise I've ever had.

That might, or might not work. If the noise is common mode, then a suppressor across the power leads won't do any good. Capacitors to ground might do the trick - if the leads are kept short enough.

I came to the conclusion that the input transformers wanted 680pf by tuning it and I didn't use teflon wire because I ran out and it was 2:00 in the morning .
As for the guys that said "dosyrific" , I'am using a Bulldog 10kw wattmeter that is not a high peak reading meter . It may not be a Bird , But won't a Bird tell me the same deadkey watts !

Nice post Jerry. Unfortunately selfrightous twits like Kari are usually not going to listen to reason, go away or change their behavior. I suggest those of us who find him a pain put him on the kill file, or otherwise ignore him. He can then talk to himself all he wants.

My opinion, YMMV

Peace, Nick

Hello Wild Bill: Well maybe the folks at X-force replied or responded
to a question. I asked the Dave Made camp quit a few questions and never
got a answer. Had Doe Ray Me in hand and hot to trot, but no replies
from the Dave Made guys.

Got the box, remeote control unit, alternator, and alternator regulator
else where. Now I have another vehicele to outfit.

I am sure the Dave Made stuff is good to go, but if your not going to
respond to a few questions, you take your business elese where.

While an American overseas is no match for the overseas kraut for sheer boorishness, Americans come close. Posts like this remind me of the debate in a rural Southern town when the local high school took up teaching foreign languages: "If English was good enough for Jesus, it's good enough for me."

Ignorance is a condition, poverty a state, but white trash is purely a matter of attitude.

Source record: 60262

Gary,

All I am saying is that your "efforts" on this board are useless. You are wasting your breath preaching at certain ones who likely already know that their activities ARE illegal. It helps no one because the illegal ones are going to KEEP operating illegally until/unless the FCC acts against them. My CB radio is a little Radio Shack rig that runs 2 1/2 watts out. I mainly use it in the car, and it is a great help in avoiding wrecks and traffic jams.

I DO resent the illegal pirates that operate within the ham bands, and just for your info, we DID have that situation just 3 weeks ago in the local area. I was part of the foxhunt team that located them, and the matter was reported. They shortly disappeared from that frequency and haven't been heard from since. I don't know whether they got a letter or not--I just know they are GONE from where they weren't supposed to be.

Again, my point is that we cannot do any good by coming in here and arguing with the illegals. All it does is start a long thread of flames and strife---and the illegal ones just keep on. So what's the good of it? What's the harm to the other hams that frequent this news-group? It creates resentment towards all hams, as well as those who present differing opinions, and sometimes makes those you are preach-ing at MORE determined to operate illegally and/or create interference to other services. You see, there is a misconception that our FCC will never do anything about the out-of-band stuff, modded equipment, and linears. From what I am hearing, that is not the case. BUT due to their current funding, they have to take on different problems one at a time. Mr. Riley Hollingsworth, Special Council for Enforcement, has be-gun with the US Amateur Service first, cleaning up our "own" house, as it were. According to him, the agenda was to begin with that, move on to HAMS operating out of band, or on CB with ham equipment, then on to other things such as the bandits on 10 meters. He has promised the US ham community that the 10 meter perimeter WILL be defended and that other bands will be corrected as well. All it will take is a few well-publicised busts and people will start getting the message. Folks don't believe that, but be that as it may.....

No, I DON'T agree with illegal operations and I don't do it. My ham equipment is of high quality, well grounded and ALL have high stability crystal oscillators installed. I currently don't even have an operating HF amp--ll are strictly 100 watt. Amps don't turn me on at all.

All I tried to say with my original post is that your postulations are a waste in this group--unless you just like stirring people up--like

Leland Scott, for example. If you do it for 40 years, your posts, mine,
nor anyone else's will change a thing. That's all

Best 73

The basis for a good antenna system is a good antenna, a good feedline, and sufficient ground plane.

Two antenna systems do not require much planning, but if you are going to extend the system for shootout, you need to map the system out before you start. The following text assumes previous antenna experience. The reflector antenna in all of the described systems will be grounded through a capacitor, although grounding the rear antenna will give close results. Help through e-mail will be provided on a timely basis.

If you are planning on using only 2 antennas, a convenient spacing may be used between the two antennas anywhere from 6 foot to 86 inches. 6 foot will give the most gain for 2 straight sticks but cannot be expanded into a competitive 3, 4, or 5 antenna system. 86 inches will give the most gain for 2 coils and can be expanded into any shootout system.
Regardless of spacing, in the 2 antenna system, you want some ground plane in front of the "hot" antenna. Placement of the rear antenna farther back can also help in two ways. It closes the back door more since there is less ground behind the antenna; and it gives the hot more room in front of it.
To quickly tune 2 antennas, place only one of the antennas in the "hot" position. Tune it for lowest reflect. Move this antenna to the rear. Put the second antenna in the "hot" position and start with it 5 inches shorter than the first one ended up. Tune until the lowest reflect is reached. Very little fine tuning of the rear antenna may be necessary.
If the antennas don't tune very quickly in this manner, then the antennas may not be resonant and other antennas should be tried.

The performance of the two antenna system can be compared to a single antenna by changing from one system to the other. A station a few miles away can give the results for both receive and transmit. Another test with the two antennas is to transmit to the other station while turning your truck around . The station should report a large change in signal from the the point at which you were facing the station, and the point at which you were facing away.
Another test that you can perform alone, is to use a field strength meter and walk around the truck while your radio is keyed. Keep the same distance from the hot antenna as you walk around the truck and you should get a good idea of the shape of your radiating pattern.

Adding a third antenna requires bracket fabrication and usually is part of an expansion to four antennas. The bracket is usually made of 4 inch C-channel. It is grounded to the roof at the mounting point closest to the hot antenna, and isolated by insulators closest to the windshield. The insulators also serve as leveling adjustments. The antenna mount on the thrd bracket is isolated for RF. It should also be movable so that the mount can be moved forward and backward on the bracket. The proper distance for the third antenna varies with the

vehicle ground plane. Recommended values are from 40 to 50 inches.
The length of the antenna will also vary with systems. It should not be longer than the hot antenna, and not shorter than 6 inches below the hot antenna.
NOTE: when changing from a 3 antenna to 4 antenna system, the third antenna will have to be adjusted both ways (heigth and distance), as you are adjusting number 4.
The 3 antenna system does not show a large amount of gain on the field strength meter or on a receiving station several miles away. In competition, it provides the antenna system with more push away power when keying next to another truck.

The four antenna system can be very different from one truck to another. The two basic types of brackets make the systems very different. One bracket system extends the bracket from the roof out to accept a fourth antenna about six foot from the number 3 antenna. The antenna mount is insulated and the antenna ends up pretty close to the same length as the third. The bracket is grounded at both ends. The other bracket system mounts on the front bumper and extends out a distance that changes with hood length and grill material type. Some grills are plastic and some are metal so the capacitance changes. If the bracket is metal, two choices of mounting are isolated and grounded. In the grounded system, the fourth antenna is very short, around 90 inches. In the isolated mount, the antenna is much longer, 140 inches or more. If the bracket material is PVC, you have an isolated system with a long antenna 140 inches or more. Both antenna systems work well but to decide which will work on your vehicle, you must spend some time tuning antennas and measuring gain. Record the results in a notebook so you can return to some settings for comparison.

Man o man....Hear the guy comes out and wishes a happy "holiday" and wouldn't
ya know someone has to say something stupid. I would probably pass out if
someone from this groupd could say one thing without some beat-off coming back
with an anylization. Happy "holiday" professor.

Wow....is that really what people do???...they go buy from someone else when they cant get any sort of customer service. If i remember correctly when they started the whole x-force thing, and correct me if i'm wrong Dan, but the biggest thing they pushed for over dave was just that...customer service. I have a davemade box and i think it is an awesome amp. Obviously i will buy x-force A: cause i know the guys, B: because they are closer and C: when you have a question it gets answered in a helpful way, but you could bet yer ass if i never got any of my questions answered or just no response i would not buy anything from them. I just see quite a few people posting out here that they can never get ahold of anyone from davemade. Of course, as soon as they post a complaint all of a sudden everyone knows an e-mails address that will get your question answered.

>
> chevy is the way to go!!!!!!

Hey Punisha!

You know, I have to agree with you on the above for several reasons. One reason is that I have had the easiest time installing radios in them over the last 34 years. The dashboards were/are very functional, and usually provided a flat underside on which to mount radios. I also found it easier to get thru the firewall to the battery because Chevy always provided a "popout" plug to chase wires thru. Also, I had less trouble with engine/ignition noise and did less hunting for noise sources. Ford, in my experience, was always one of the noisiest vehicle to have a radio in and took more to get rid of it. The absolutely WORST noise case I had was a Chrysler in which I thought I'd NEVER get rid of the igniton noise--VERY expensive to cure. I was glad it wasn't MY car. Back to the Ford. Like one fellow said here, everything you need to get at seems to always be behind something else, which is behind something else.... And that goes for maintenance/repairs as well as radio. I've had some Fords in for install where I had to move heaven and earth figuratively to get at wires, feeds, and cable chases and also had trouble finding access holes (sometimes non-existent). So, over the years, while I don't <<hate>> Fords, I tend not to buy them as much for the radio problems as for the mechanical troubles I *DID* have. And I don't (knock on wood) have trouble with Chevrolets like I did the Fords. They just seem to hold up better, more amenable to radio installs, and drive better (to me).

So, Punisha, we definitely agree on the Chevrolets!

What is the range of capacitance of a GMA40001? It is not listed on communications-concepts.com page.

Also, what is a good starting range for MRF454's with a violet dot? (beta range 72-93)

Any helpful information will be appreciated. Of course negative flames will be ignored. This is for a TS-350 that is for a licensed ham. The transistors were given to me with the amp. Thanks and Happy Holidays.

He could fix the pot himself without buying a new one......Just take one of the side wires off the pot and put it on the other side. This will make it work in reverse but will save him from having to buy a new pot. Until he twists it again while keyed up. When he turns it to the right, instead of turning up the power it will turn it down and vise versa. You can get a second life out of the pot if you don't mind the reverse operation. Better yet just buy a 5 watt 100 ohm pot the next time and it will hold up much better. Factory pots were only 2 watts.

I do hope you have read ALL my messages, to give such an opinion. I am simply pointing out that there's nothing to brag about in the use of illegal equipment, also on ham bands. I have absolutely nothing against legal CB stations, nor you. Whoever takes offence, well, I can't help it. Have you ever been angry about the linear amplifier equiped CBers that come to e.g. ten meters? What would you do about the situation? What's the role of the FCC or the ARRL? Individual amateur radio operators?
Yours, Kari, oh8mfh

> You are making it difficult for the rest of us, and Amateur Radio in
> general by coming in here and stirring up anger and strife.

What do you mean by "the rest of us"? Do you have some sort of authorization
to speak for all the hams?

With all due respect, and assuming you ARE in Finland, the
> actions of domestic CBers and the reactions of FCC are not within your
> purvey.

Thanks for the respect, maybe a slight doubt lurking there in the
background? I am in Finland, and I am a licenced amateur, with full
privileges. I teach two courses of ham radio classes a year. My experience
from amateur radio, propagation on HF etc. has taught me that RF respects no
national boundaries. So, also with due respect, if you accept the behavior
of the illegal CBers in this ng (examples: "take a look at this five over
five over five in southern Europe- isn' t it a nice sight?" or " look at all
the wonderful homebrewed power amplifiers I have at my CB quote freeband
unquote station" or " I've worked plenty of European CB stations on 27.555
MHz" - isn't there a 150-mile rule in the CB QSO category?), I do not think
you are thinking of the interests of amateur radio, either, if you think
that I am not, Sir.
Please bear in mind that I am NOT talking about legal CB stations who follow
the FCC and ITU rules - CB radio is a nice hobby. That is, the legal one
that you say you do - how can I be sure of that? You'll have to accept
similar doubts from my side, don't you think?
All I want is to be able to have QSOs on the ham bands, OR on the legal CB
channels using a legal CB rig, for that matter. We simply have enough of
interference from illegal stations all around the globe, also from the
United States. By the way, if a Finnish ham operator detects a pirate signal
coming from his neighborhood, he simply picks up the phone and calls our
(corresponding) FCC. It has happened, to my knowledge on 144-146 MHz, done
by hunters and such. The next time they start transmitting, we already have
found their location with the help of directional antennas both on the
authorities' and hams' side. I have done that, and many, many other licence
holders in the OH land. Result: no more illegal working on the bands. That
is why I do not think kindly of the type of CBers we are talking about.
Also, asking me to leave this newsgroup seems very peculiar coming from a
citizen of a nation, whose constitution has been built on the basis of
FREEDOM OF SPEECH - same as in Finland and most other democracies.

Yep - how is this one??

AP 17NOV2000 Washington USA
Serbian president Vojislav Kostunica deployed more than 30,000
peacekeeping
troops to the U.S. Monday, pledging full support to the troubled North
American nation as it struggles to establish democracy.
"We must do all we can to support free elections in America and allow
democracy to gain a foothold there," Kostunica said. "The U.S. is a
major
player in the Western Hemisphere and its continued stability is vital to
Serbian interests in that region."
Kostunica urged George Bush, the U.S. opposition-party leader who is
refusing to recognize the nation's Nov. 7 election results, to "let the
democratic process take its course."
"Mr. Bush needs to acknowledge the will of the people and concede that
he
has lost this election," Kostunica said. "Until America's political
figures
learn to respect the institutions that have been put in place, the
nation
will never be a true democracy."
Serbian forces have been stationed throughout the U.S., with an
emphasis on
certain trouble zones. Among them are Oregon, Florida, and eastern
Tennessee, where Bush set up headquarters in Gore territory. An
additional
10,000 troops are expected to arrive in the capital city of Washington,
D.C.

by Friday. Though Kostunica has pledged to work with U.S. leaders, he
did
not rule out the possibility of economic sanctions if the crisis is not
resolved soon.
"For democracy to take root and flourish, it must be planted in the rich
soil of liberty. And the cornerstone of liberty is elections free of
tampering or corruption," Kostunica said. "Should America prove itself
incapable of learning this lesson on its own, the international
community
may be forced to take stronger measures."

You're right... it has been customized for my likings. This is just a guide for others. You could certainly use pots to play around and get the results you prefer. See www.analog.com for the SSM2166 data sheet. It's worth a thousand words here...

Hi and thanks for reading this post

I recently acquired a General Electric 40ch CB radio Model A3-5825B (twin board model) for $10.

The idea is that it was going to be $10 worth of spare parts or a fixer. Well its closer to a fixer than spares so has anyone got the schematic diagram for this radio as I don't have one.

Currently the lights come on but there is no-one at home (no RX/TX). It appears that components have been added and subtracted but I don't know what the correct ones should be.

Any help would be appreciated. Scanned schematics are OK

Thanks in advance

Adam

I said I can hear the other guy louder THAN Bob, doesn't mean I hear either one of them LOUD! Shoot, here in the 'pile, poor ol' bob and his lackies don't have a chance. Too much cold country, TX, Bayou, Cal. and a few others clean his clock, but Bob knows this. He knows the 'pile is one of those states that he really can't touch, chalk it up to location, water, whatever. Not so long ago I asked what happened to him 'cause it's been awhile since I heard him. Turns out he's been in there all along..same with 101 charlie port-a-potty..ain't heard him in a long time..go out in the boat, crank it up, and there is a direct line right over top those monkeys!

swap
Looking for a Manual and service info on a Demco Super Satellite
setup. I am trying to restore the following mid 70's vintage CB
setup to original operating condition for a collection.
I need info on the following pieces:
CB Transmitter
Receiver
Speaker with modulator
stand-alone modulator
CAP (Business Band ?) Transmitter
25 - 30 MC Amplifier (Pre Mhz)
Wavalyzer
This is the Super Satellite, not the satellite.
Any pointers to Demco collector sites appreciated.
TIA,
David

From: truth@planetc.com
Message-ID: <8vjga6iog1@nnrp1.deja.com>
Source record: 60346

Yep I did. What a pain in the neck! The whole job was a bear! I've been installing CB's in all kinds of vehicles for over 21 years, and either I am getting lazy working for those great truck drivers, OR these SUV's are a big PAIN! OR both!

I put it in a FORD recently. Antenna went in rear hitch hole in bumper, and the pain was trying to hook up CB power to the radio fuse so it goes ON in the Acc. position. There wasn't any fuse in the fusebox that did this! Even the stereo fuse! Just key on position & that's it! Has anyone else had this problem? Gimmy back the '80's vehicles when things went EASY !!!!!!! Is my neck getting redder or what?

Tomorrow I put in a splitter off the AM/FM antenna in a Nissan SUV, I think. Will I have a bear with that? CB already in that one. I am amazed that I haven't done MORE SUV's. I guess that them commy yuppies have NO IDEA that CB's can save them $$$$$ form the BEARS and traffic tie-ups ! I guess they have $$$ to burn! Maybe it's better they DON'T KNOW. Then I won't have to rack my brain as much! But I guess I could use the $$$$$! I post the results of how it went! Let me know if I will have a GOOD time with it or not in removing the stereo tomorrow, which I have been instaling them since '73, so I can do!!! Dave!!!!!

Source record: 60299

I have a Swan 1011... I did download the Siltronics manual (Thank You!) and the radio is very different but I am muddling through the repair... My problem is a weak "S" meter reading. I replaces all but the vfo amp tubes in the rec. circuit but this had no effect. I changed all related resistors in the circuit that looked bad and that also had no effect. There is a difference between the circuit in the manual and the circuit in the radio. I may have to acquire the right manual for the Swan. After 25 years away from the repair business I am finding it hard to remember things! Old age is playing a part as well!
Thanks for the help guys...
Mike

From: shamner@my-deja.com
Message-ID: <8vi02uksu1@nnrp1.deja.com>
Source record: 60303

I am a newbie there is no sense in denying this... my question concerns the use of 2 antenna for the purpose of better reception and if that won't happen then maybe using one as a tx and one as rx? Is there any benefits to this setup? The reason for the question is 2 fold I have a 5 foot firestick and I am starting a new job that requires me to park in a parking deck with 6'6" limit ...basically bending my poor antenna out of shape or on a trial I bent the holy hell out of it in order to make it to an interview on time.
My second option is to park in a parking lot which is unprotected. I am learning that most on here disapprove of linear or other such means of increase output so if I went with a 2 antenna setup (2 foot shorties mounted on my bumper as opposed to a 5 foot firestick mounted to my third brake light) what can be done to increase performance tuning or cable wise.
I have not replaced my stolen CB so maybe if a CB out there that has one tx and one rx built in I could get that or is there a way to rig that? If 2 antenna are a bad idea what would you recommend for a short antenna and cb combo.
Lastly, I use this mainly on trail rides so I am not looking to over power anyone. I hope I supplied enough info for you guys to help me out.
Thanks
Steve

I this power into a dummy load and does the swr still stay at the bottom? -
I would have to say that anything over 220 watts out of that would have to
be on a magic meter or that spurious emissions bastard that creeps up on ya.
How low does it go with the caps on the output?

"RON BENZ" <BENZ302@webtv.net> wrote in message
news:13130-3A1BFF87-3@storefull-128.iap.bryant.webtv.net...
I just got done building a box with 4 - 455s in it . The box is doing
350 swinging to 650 running 14 volts , so the box works fine .
But the strange thing is that it doesn't want any capacitance at all
across the output transformers . I ended up using a 680pf cap on each of
the input transformers , like you normally would . But the power drops
way down if I use any caps at all on the output transformers . This
seems very odd to me . Does anybody have any suggestions on this ?
The only thing I did different from normal box building techniques
was that I used regular copper building wire to wind both the input and
output transformers .

THANKS
BENZ

Skipp and I have butted heads before.

First of all, he doesn't know how to tune tube amps.
Secondly, he doesn't know a decent solid-state amp
when it comes up and bites him on the ass. You'll
have to excuse him for both of those shortcomings.

news:3A1D832E.2F1F@bellsouth.net...
> Gary,
>
> All I am saying is that your "efforts" on this board are useless.

Jerry,

Thanks for a straightforward and honest reply. If all the ng messages only were such! BUT they aren't, sorry to say.

I have no illusions about the illegal CBers' desire to become legal, that's not the point, you see. They simply mouth off, and boast with their illegal setups. Remember that decent and honest CB people also read this ng, including you, other hams, friends and neighbors. The illegal CBers are trying to set up an example for the others, bragging with their linears etc.

That attitude makes me a bit angry at times, I must admit. And arguments rise. And hopefully, when the dust settles, the arguing and exchange of views, no matter how heated they get, MIGHT, just MIGHT get SOME people thinking. What's right and what's wrong - maybe I am an ideologist in that respect, but I can't help being that way.

If I read interesting questions from the legal CB bunch, e.g. about antennas, feedlines, coax losses and such, I will be more than happy to tell them anything I might know about the issues as a licecenced operator. I am simply too fed up with the illegal Cbers causing havoc on amateur frequencies. If I cause some blood pressure among those guys, so be it. There can't be any restrictions on the use of modern technology such as newsgroups in the business of exchanging views about radios, either.

Hopefully I didn't hurt too many decent CBers' or hams' feelings with my messages - if I did, that was not my intention. And I couldn't care less about any possible traumas that I cause among the illegal ones. To tell the truth.

Hope to copy you one day on the bands, we might have a chat. I sometimes work on twenty with the callsign OH8ABI, sometimes with my students during the amateur radio classes.

73, Kari, OH8MFH

Regards the use of SSB
Any body that thinks that you are going to be allowed to use SSB on the
27mhz band are in dreamland. The people that be, would not allow us
lowlife Common people to be able to talk to the outside world.
The rest of the world use the 27mhz band, so we in this country
will never have freedom to talk to other Countries on the 27mhz band.
This country talks about police states. But if you can find any other
country in the world that has more laws than this country please
let me know

Regards CB user.

AM and sideband are the only modes _allowed_ here between 26.96
to 27.41. Of course, there will always be _others_. You can move
to the US from the UK, but you can't the UK out of the person. <g>

> This country talks about police states. But if you can find any other

1. There are no CB shops, as such, in the Yellow Pages. Look for a Radio
Shack (20 in the Orlando metro area) or Wal-Mart (10 in the Orlando area).
2. Take plenty of money to feed Mickey.
3. Take plenty of sun screen. Even in February, people from UK turn beet
red.
4. Learn to speak Spanish.
5. Take your own ballots. No dangling or dimpled chads permitted.

YOU cause trauma? LMAO! I am beside myself in laughter! I said it before and I'll say it again, it is amazing how full of yourself you and another preacher on here are, to actually think and believe that your word carries so much weight!
Your categorizing continues blatantly in all your posts. Not all freebanders mess around in hammie areas. Not all freebanders boast of their illegal activity, equipment, and most importantly, not all freebanders run illegal power. If you want to lump all freebanders together as lawbreakers, go ahead and do it, but at least be accurate about it.
As far as "get some one thinking", you might want to practice what you preach. Doesn't appear to me that you have done much of that yourself. Lets see, you come in here and play radio cop, then elevate yourself to that of omnipotence status,, whine about cbers infringing, then post your call and what band you're gonna run with your class. Seems to me that you are setting yourself up for a bootlegger to hammer you so you can immediately run back here and post about it and claim your entire class was able to copy the "typical" cber that operates illegally. Would you call that rationale thinking?

tj1072, It is kinda funny you are pushing customer service regarding illegal amplifiers, but that is to be expected since you are part of there production line at xforce. But i am wondering where do all the davemades come from if there customer service sucks? Someone must be happy somewhere since there are many out on the airwaves . Down here at our shop in Va we have a somewhat informed customer base they dont come to us asking how many watts will my amp do with a mirage 88 deadkeying 2.5 watts swinging 35 pushing a 5 pill at 14.25 volts, well how about at 16.89 volts will it do the same. etc etc. They know what they want If not they can buy a texas star , palomar, I dont need to sell them a davemade for the sake of selling a amp When i want to buy a rebuilt motor for my car i dont call Hendricks Motor Sports and ask them how many horses can I expect with one of there motors in my olds cutlass work car, how many miles to the gallon Ill bet they wouldnt even talk to me you ask why because i am not in thier league even though there motors are some of the best out there used on the Nascar, Busch and grand National series. The people in the know will get thru to them and will get a great amp I don't think davemade wants to or needs to sell amps to the whole world maybe thats xforce amps goal. you had better bow down to the snake because without it you would still be using pirate amps in west Chicago.

For a standard Base CB radio the Uniden Washington is a great radio. Simple to use and sounds great. On my stock Washington using a Army big stick I do make SOME DX contacts. This is with the (the legal beagles with love this) stock 12 watts output on SSB. Of course I am just trying to git down the road a ways...can I help it if my signal skips? :) BTW: I do use the D104 mic as well.

If you really want one that talks...get a Cobra 1000, or it's Uniden counterpart, the Dwight D.. each has a seperate speaker, and they have the loudest audio of any transistor AM base I've ever heard... Clip one diode, peak and talk.

For a standard Base CB radio the Uniden Washington is a great radio. Simple
to use and sounds great. On my stock Washington using a Army big stick I do
make SOME DX contacts. This is with the (the legal beagles with love this)
stock 12 watts output on SSB. Of course I am just trying to git down the
road
a ways...can I help it if my signal skips? :) BTW: I do use the D104 mic as
well.

Have a question(s).....

Why are there people on 555?
Why out of band?

In this area, The county has been cracking down on CB usage other than usage stated in the CFR!

Just the other day a neighbor, who was using 300 watts, was sited for the power amp usage and all equipment took. (This person was comming in on the local computers's speakers for up to a mile ormore. Plus the local pager was affected.

This person, found out later, was operating out of band and having conversations of greater than 150 milr limit.

There are several CBers inthis area that are still using the leaal 4 watts power output and is operating over 10 mile ranges.

So, just courious, why take chances, and operate out of band and with power?

Yes, and no. They followed along closely with Palomar and Siltronix,
although the model numbers sometimes differed.

You can write directly to Firestick, and they have schematics for every PAL
device I have ever wanted, and have always been helpful.

Secret CB also covered them in many, many editions.

Greetings!

Just to let you know, many Fords and GM products have a separate ON relay for the ACC position. It goes to a module that senses current drain, and ignition relay status. It's designed to turn off a selected device if an accessory is left on for an extended period of time.

The darn thing is a small computer, hooked up to each device with a sense lead, and if the device is either tampered with, or one of the sense lead devices is left on too long, it shuts off the relay.

It can work in the owners favor for preventing the "hotwire" people from getting too far ahead of the police. It shuts everything off after about 15 minutes of time - and cant' be reset unless the key is in the start position [recycles].

On Thu, 23 Nov 2000 16:23:36 GMT, while the modem was pondering it's navel, truth@planetc.com dissertated the following:

:+> Yep I did. What a pain in the neck! The whole job was a bear! I've

> Do the variable pot on ModV burn out like the pots on other TS amps. when
> used to reduce the power out?

Yes, if you turn it while keyed up. Otherwise, the only way it will burn
out is if you clobber it with too much carrier.

>
> When using the pot to reduce power, does it reduce both the carrier and
> peak?

Yes. The pot is designed to be set where you want your maximum PEP output
at. Then, you set the carrier level with the carrier control in your radio.

So, if you have a box that needs 75 watts PEP to drive it all the way, turn
your knob to the point where the modulator is only doing 75 watts. Then,
adjust the carrier control in the radio to give you the amount of carrier
you want (The TS Modulators like to key about 2.5 watts, which corresponds
to about 1.5 to 2 watts of carrier input)

>
> What carrier level does a ModV put out with the pot wide open and a 2-3
> watt carrier from radio?

They get real squirrely when operated above 2.5 watts carrier input. They
operate on the "Lets move the non-linear amplification knee right at the
point of carrier"... So, whenever ANY power is added (from modulation), it
will make a huge jump on the modulator.. Hence the higher forward swing.

I feel for ya' Jag! Around the new year last January I heard him talk about taking over 555 for the millenium or some similar BS.,,,,every single day. But..as I said, he seems to have faded from the 'pile compared to when I first heard him. That's a good question, though, why no one shut his ass down yet. My guess is he is isolated by a secured gated community or a fence or something similar keeping the public at bay. Either that or the locals in Phoenix have no cajones or just don't care!

The bill to allow local law enforcement to enforce the regulations regarding illegal CBs has passed the house. It won't be long now till the local sheriff will be banging on mr. big cber's door. The morons have done it to themselves, if they had chosen to operate legally instead of illegally the bill would not be necessary.

H. R. 2346
One Hundred Sixth Congress
of the
United States of America
AT THE SECOND SESSION
Begun and held at the City of Washington on Monday,
the twenty-fourth day of January, two thousand
An Act
To authorize the enforcement by State and local governments of certain
Federal
Communications Commission regulations regarding use of citizens band radio
equipment.
Be it enacted by the Senate and House of Representatives of
the United States of America in Congress assembled,
SECTION 1. STATE AND LOCAL ENFORCEMENT OF FEDERAL COMMU-NICATIONS
COMMISSION REGULATIONS ON USE OF CITI-ZENS
BAND RADIO EQUIPMENT.
Section 302 of the Communications Act of 1934 (47 U.S.C.
302a) is amended by adding at the end the following:
ï¿½ï¿½(f)(1) Except as provided in paragraph (2), a State or local
government may enact a statute or ordinance that prohibits a
violation of the following regulations of the Commission under
this section:
ï¿½ï¿½(A) A regulation that prohibits a use of citizens band
radio equipment not authorized by the Commission.
ï¿½ï¿½(B) A regulation that prohibits the unauthorized operation
of citizens band radio equipment on a frequency between 24
MHz and 35 MHz.
ï¿½ï¿½(2) A station that is licensed by the Commission pursuant
to section 301 in any radio service for the operation at issue shall
not be subject to action by a State or local government under
this subsection. A State or local government statute or ordinance
enacted for purposes of this subsection shall identify the exemption
available under this paragraph.
ï¿½ï¿½(3) The Commission shall, to the extent practicable, provide
technical guidance to State and local governments regarding the
detection and determination of violations of the regulations specified
in paragraph (1).
ï¿½ï¿½(4)(A) In addition to any other remedy authorized by law,
a person affected by the decision of a State or local government
agency enforcing a statute or ordinance under paragraph (1) may
submit to the Commission an appeal of the decision on the grounds
that the State or local government, as the case may be, enacted
a statute or ordinance outside the authority provided in this sub-section.

ï¿½ï¿½(B) A person shall submit an appeal on a decision of a State or local government agency to the Commission under this para-graph, if at all, not later than 30 days after the date on which the decision by the State or local government agency becomes final, but prior to seeking judicial review of such decision.

Per EEI: No, you are not imagining things. Your computer is not playing tricks on you. EEI now owns the web domain www.coaxkid.com . If you are a previous customer of Left Coast Radio, you can expect equal or better service now from EEI. If you have never shopped there then you have no doubt seen the www.coaxkid.com in the search engines. The ownership of the company in question has liquidated their web presence, and EEI has purchased www.coaxkid.com with full rights, and will be buying out yet another big name in radio soon as well. All in our ever increasing effort to provide our customers with all the information, products, and services needed today. As we expand our market expect to see lower prices, better deals, and larger selections. One day we may the only online consumer electronics firm, but you can count on the same service and support as we have provided to our many customers around the world since 1978.

Express Electronics your number one source for quality performance electronic equipment, and all you radio equipment needs.

> Food for thought. Please induldge.
>
> American Eagle 352

Probably will still do. The Maritime and Marine OP's on 20 Meter Ham have
been doing this for YEARS. The only time the FCC will act is if during
an inspection they find a "modified" ham tranciever, meaning one that
will effectivly transmit anyplace between 1.5 to 30 MHz. (most ham rigs
are very easily broadbanded for full-range transmit. often all you need to
do is remove or add a diode or two from the CPU board) In that case, and
SPECIFICALLY if the FCC finds that HF Marine Radiotelephone or HF
Maritime Ship channels have been programmed into the memory, they will
take an "RF fingerprint" of the transmitter and compare it on the spot in a
database in a laptop, or compare it at the lab in Gettysburg Pa.

Bottom line, if your using a "geeped" ham rig on HF outside of the ham bands
best to be carefull, especially if your a boater.

Go to www.google.com and do a search on the words "ham mods" and see
how many pages their are! Amazin.

Source record: 60394

Hello 45Bogie: The element lengths and spacing of any Yagi Beam Antenna can deviate a little. What is great to know is what is out there that works, and is proven. Here is the MaCo web site that you can down load all the beam dimensions. Your question is asked quit often. And this web site is a treasure of CB Beam Antennas and such.

http://www.majestic-comm.com/maco/support/index.htm

Also look in the ARRL Antenna Book, the new 19th Edition is out. Look at chapter 11 for High Frequency (HF) Beam Antennas. They show 10 meter beam Antennas that can have the elements easily lengthen to work on 11 meters CB Band. Also look at chapters 20 and 21 for materials and suppliers.
The ARRL's web site for antenna book is here:

http://www.arrl.org/catalog/index.php3?category=Antennas%2FTransmission+Lines

The Book: "The Truth About CB Antennas" written by Orr. Is a good book to read for beginners. But the dimensions of the beam antennas are not correct. Orr's beam antenna book, of later printing dates have been corrected for the ham radio beam antennas, but the book "The Truth About CB Antennas" has not been updated or corrected, but is good source for the beginner. Better to stick with the MaCo or ARRL antenna data, that is proven to work.

Be advised: Making a Beam Antenna may not be a real hard job. But tuning the antenna, mounting, and installation is part of the ice burg task that isn't seen or considered by a lot of new antenna builders. In fact the tuning along can drive ya to drink and kick the dog. Suggest you look around at local beam antenna installations, and talk to the owners about them and what it takes to get one up. Sometimes the local CB'ers or ham radio guys might have a used tower, rotor, and beam antenna your looking for. The local Ham Radio Store usually has a bulletin board that has towers and such posted for sale in the local area.

Jay in the Great Mojave Desert.

Great!!!!!
First thing I'm going to do is call in a complaint on the Ham down the road.
If his equipment is modified to run 11 meter, and it is, he will be busted
under this new law.
Sounds like a plan guys. Drive through town, see a Hambo's antennna, call in a
complaint. Even if they are legal, I doubt a Cop would know the difference.
Imagine the time and cost to prove they are legal. They do have a lot more to
loose than we do. By the way. Where does this Gary guy live ?

The new Ford one ton will be in next week with a head ache rack.

Want CB in cab.
Want Icom R100 in cab.
Receive TV voice (59, 71, 87, 179)
Receive Govt (460,155, 159, 139)
Want Scanner antennas on rack.
Want CB antenna on rack
Would like the two antenna to appear alike.

Would like to configure scanner and CB such that
CB will not blow out scanner. Scanner has three
antenna inputs. Can scanner and CB share CB
antenna with any protection for scanner?

Usage
CB primarily for road communication, emergency, hunting
warding off tailgating trucks and in town local information.
I have 100 want amplifier that has only been used while
stranded in Colorado elk hunt for 10 days.

Would like to purchase top of the line antennas and CB.
Cost is not of concern, quality is. Would greatly appreciate
recommendations.

Sincerely, Cliff Harrison

Porpalorpa,
So if Al Gore gets in and bans cb all together, enforcement is easier since they already have their foot in the door on this one. The Left love a good witch hunt.
It might sound absurd but, our freedoms are going bye bye.
Since you took such a smug, arrogant tone, I throw your own words back AT YOU!
Keep on bragging. Keep acting like brainless assoles. Keep denying
any law can touch you. Your time is coming. And you brought it on yourself.

When we read this just a bit closer it appears that all that has really happened is that Congress has lifted the Federal preemption on unlicensed services. This does not mean that the local Barney Fife is going to have to become an expert on the workings of a President Clinton Mark II or know 27 MHz from the 2450 from your microwave oven. It means that if Sadie Frump is having her daily fix of Regis and Kathie Lee and is interrupted, she can call the East Beartooth municipal gendarmarie and accuse you of general peace disturbance or being a nuisance or mopery with intent to gawk if that is locally illegal. He could probably trip over your 19 sweep-tube line-ee-ar and not give a healthy hoot so long as you don't disturb Sadie's G-line Philco watercooler.

It isn't the CB rules he is enforcing, its the municipal code of East Beartooth.

May God have mercy upon you.

Hi JR

Most important is that legal Hams and Cb'ers alike are protect from any action from this new law. But what if you are not legal? JR, are you legal? Where do you live?

(chuckle) Hey Ben, enough calls like that and they will begin to treat it like the barking dog complaint, or not at all. I live in a metropolis, and have a LEO in the family (inlaw). He said what COULD happen, if this is actively pushed, is a single cop, or two made up as a team would probably be assigned to a squad to handle complaints, IF the number of complaints forthcoming are repeated and numerous. Our sheriff will not act unless it is a safety issue or nuisance and there must be multiple offenses to justify any real legal action, other than a verbal, "Sir, we received a call from the woman down the street who calls in every single time she cannot find her dog, and she feels the little voices on her plug-and-play remote are coming from your house". One would be extremely hard pressed to find a judge to sign a warrant to enter the premises due to the great probably of error leading to liability on behalf of the LEOs, at least around here. Maybe if they offered a bounty, with the precinct that made the confiscation a percentage of the booty like they do with drug forfeiture, some Barney Fife-type towns may take advantage of this. But that didn't happen and if anyone in the larger cities are familiar with their local LEOs, chances are you can relax and chat away on 555, or your favorite freeband. Officer's discretion is going to play a huge matter in this, just as whether you get a speeding ticket or not. And if ya' have a fishing buddy that is a cop (y'all hear me up there on them-thar lakes?), show him your knew rig next time you take him out. And to the person that posted about transmitting from a boat, I can GUARANTEE you that a true pirate radio station can operate for years on end from the water without so much as even a skirmish.

Locals are not going to be enforcing radio rules; all that happens is that Federal preemption is lifted for unlicensed services so local nuisance ordinances can be enforced. Presumably the nice FCC license in the frame above the rig allows one to tell the local officer to take a hike.

Seems about all that is going to happen is that there will be a run on Codeless Tech licenses to post above the modified President Clinton Mark II and 4CX10000 line-ee-ar.

6514. Bill: HR2346 : hams beware

Newsgroup: rec.radio.cb
Date: 2000-11-25 00:00:00 UTC
From: dukkhakoti@aol.comblahblah
Message-ID: <20001125122106.24651.00001564@ng-cd1.aol.com>
Source record: 60421

if this bill does pass , hams have much more to loose . hams have licence's to loose , and radios that cost much more than cb set ups .

a serious ham will loose his 1000$ Yeasu , and his licence .

most cb'ers will loose a 200 $ radio .

even if this is real and it does pass . for the fcc to "bust someone " the need alot of expensice equipment to triangulate the transmitter . find what freq he is on . get a field strenght reading , and have trained personelle that would be able to prove in a court of law that from all his reading on all that stuff that this one person was the one transmitting .

unless every single police department is gonna fund a cb swat team , hire RF engineers , get all that equipment , then spen the $ to inforce the current laws so all those "dangerous cb'ers " can be controlled , your nuts .
you think that any city will pass a tax hike to fund this ?

do ya really think that any cop will care if my radio is illegal ?

WOW! I think I just came up with a new internet business. Fake Fcc license, framed and ready to hang above your rig. New replacement face plates for your export that have names like Kenwood, Yasue, Icom. Fake Fcc type acceptance tags to be placed on the back of of your export. I assume there will be many Hams willing to retail the above along with the amps and export radios they already sell to the lowly cb'er.

> sell to the lowly cb'er.

Go for it man. Actually getting the Tech ticket costs about 7 bucks and memorization of 35 questions so the real thing is your competition; ain't that bloody difficult. Fakery is, of course, common as hell: how many guys at the local meat packing plant have the same SS#. But given that the local Barney Fife is enforcing a nuisance ordinance, not the radio rules, why cast real pearls before fake swine?

There certainly was a time when the average ham did unload his garage on the local CBer with his two-propeller beanie. But if he is unloading an 'export' radio either he had it before getting his ticket and needs the money for a downpayment on a good rig or his buddies came into his shack and laughed like hell.

I watched the bill being urged for passage in the House of Rep. on C-Span just a few day ago, it was in the paper the other day that the bill has passed, it's real, it is not a farce. Clinton will probably sign it into law with a few weeks...deal with it.

You are correct. HR 2346 can be found here:

http://thomas.loc.gov/cgi-bin/query/D?c105:1:./temp/~c105L3CZy1::

It is a veterans memorial protection act.

See the channel bullies.

See the channel bullies run.

First they laughed and said this bill would never pass the house because "no one was interested in it".

Then they said the bill would never get support in the senate because "there really wasn't any CB problem".

Now they say that the bill doesn't even exist! LOL!

They are so attached to their big linears that they are spreading the story that this bill will hurt the legal as well as the illegal.

And if and when enforcement comes to their town, they hope the local cops will be weak and corrupt, and the neighbors will be apathetic when it comes to CB interference.

They just want to keep their illegal stuff on the air. Period.

Don't worry about the few 'loony toons' out here. My only concern is that this is going to be messier than most realise it could be. Once the locals get the smell of easy money, it could make the radar traps of some small towns look like romper room. Don't worry about it. If it doesn't happen, it won't affect anyone. If it DOES happen, it won't affect me - nor, do I suppose, you. Have a gooder!

>amp.

Uh bill.....I dont work for x-force...im just a common customer, but i see a lot of stupid things that people do and if you dissagree that there are quite a few people that hook up amps and dont do it the correct way(power wire size, swr, ground etc..whatever the case may be) then you better open yer eyes a little bit. You think that all the amps that dave, x-force or any of them guys get back are blown up because of poor workmanship? Doubt it.

No it doesn't.

It serves twofold purpose.

The more capacitance you have from collector to collector, the more current the transistors are allowed to draw. When tuning an amp for volts, this means using less C-C Capacitance.

However, the REAL use of them is to tune the reactance out of the transformers. See, those windings on the ferrite transformers have inductance. The capacitor cancels out the inductance of the windings, making it appear to be a true resistive impendance, rather than a "complex" impedance.

Hope that helps.

I would think it would make more sence to see the FCC improve the quality of television. there is very few programs one can watch with the children in the room. I also think that this is going to cause more problems than it is worth. While the officer is answering a call about a bleeding CB a man is breaking into a house 3 blocks away and the cop is too busy trying to figure out where the coax goes at the CBer's house. In the process he finds a linear (at least he thinks it is) so he takes the guys stuff (which in real life is a homemade preamp) the guy gets upset and goes to jail for interfering with a police investigation. Meanwhile the guy gets in the house down the street, the homeowners hit the POLICE button on their alarm but the officer cannot make the chase because he has a disgruntled CBer in the back seat who is pissed off because the police officer took his new homebrew preamp. This could have been solved long before if the equipment coming from overseas would have been properly designed in the first place. I once had a neighbor that interfered with three electronic items I owned, I stop the interference by adding to my equipment using ferrite beads and caps. At the time I had a Cobra 2000, stock with a D104 and an Antron 99 about 20' off the ground, the guy causing the interference was using a homemade dipole strung between 2 trees. Noone knew he even owned a radio so I got blamed for all of this, my radio had not been powered up in over a year.
I just think that this Bill will cause problems for anyone with an antenna at one time or another, even Hams.
It just gives the police officer the right to enter your house and vehicle.

That is just my point. Maybe the the people against this bill should voice their opinion to their congress.

Well this really depend on where your located at and where you will be working. Are you in the mountains, big city, country, ect. I am sure that there is many different ways of going about this with CB equipment but you might want to look at Cell Phones like Motorola Direct connect. If you operation is only and annual thing (as in you don't run a buss durring the rest of the year) there are lease options on this equipment and might be a better option (more reliable ie:little or no interferance and possibly cheaper). If you live in the mountains 5 miles on a CB could be pushing it, as well as if you are operating in a major city (shouldn't be though). If you do decide to go the CB route I would recomend that you take peoples suggestions and when you make a decision on a particular setup, just buy your base and one that will go in the plow, and test it out first, drive all over hell and back where you're likely and not so likey to go and make sure that you can communicate, Watch for dead zones (areas where you can't receive any signals and make your drivers aware of them).

Good Luck,

Maveric

Anyone have an idea on how to mount a whip on a Dodge Stratus. Anyone already did?

youll be best buying something like the cheap superstar radios and using the lowest freqs in that radio on the AM mode and youll get 5 miles mobile to mobile no problem at all with little to know interference

>> I need six CB radios and a base station which will operate in a five mile
>> radius. We've got a small snow plow service and need to be able to talk to
>> each other. We're not wanting to spend any more than necessary but want to
>> get equipment that will work. I appreciate any recommendations for radios
>> antennas and suppliers. Thanks.

Aside from the illegality of the amp, take a tape measure and determine the distance and cut the coax to fit. If the boxes are 4 feet apart, a 3 foot length is too short. if they are 2 feet apart, the 3 foot coax is too long.

You can thank all of the cb morons who have insisted on running illegal, modded, over modulated radios driving high power splatter box amplifiers spewing vulgarities over the airwaves. The cb community has no one to blame but themselves for such a bill having to be made into law.

It is possible to run more then 4 watts cleanly. The problem lies in the fact that most folks equate distortion to loudness.

> spewing vulgarities over the airwaves.

If you hear someone cussing on the air, you know it's not me.

> The cb community has no one to blame but

This is in a big truck and driving me nuts! At idle, at a stop the CB has almost no static. When going
over 15, 20 MPH the static is so bad thru the antenna the CB is almost unusable. I've changed
coax, ant, ant mount, put a ground wire on ant right to battery , and ground wire from battery to
CB neg wire. Nothings worked. New, stock Uniden 68 CB. Help! thanks. BTW the noise wasn't always there.
Bought a noise filter but haven't installed it yet, noise is coming thru antenna anyway.
I've heard wheel bearings can make noise. Cure?

Source record: 60468

Folks,

Let's face this with truthful hearts: Most CB'ers operate illegally in one form or another. Each of us who are hams but once CB'ers remember...

The correct avenue to communicating for fun is amateur radio. It has the structure
and abiility to police itself that 11 meters will never regain.

Why even be upset about this bill being signed into law? It has effect only on illegal operating. It should be illegal for someone to disrupt the peace, whether it be with loud music at 2AM or a broadband "low dead key" amplifier on an export rig.

One thing I do see here...you guys arent unable to get a ham license...you just seem not to have done so. Why not? Get away from the crap, the garbage...leave the psychologically challenged clowns who agitate and play silly games. Join the ranks of experimenters and contesters and public service volunteers.

I welcome any of you who are interested in the Toledo, Ohio area to my home for assistance and introduction to the course of action of getting a ham license. Mine is worth a million bucks to me and I will help anyone who wants to get theirs for free.

Just e-mail me.

73 N8WWM Doug in Toledo

Length really doesn't matter. In some cases the coax length will affect the input match on the amplifier but it is not enough to matter. Use what ever length it takes to get there.

Basically any irate neighbor, any enemy, or just any person out of the blue including a righteous or jealous Amateur can send the cops to your door to enforce Part 95 rules. They only need to make a real or fictitious TVI or interference complaint. This will allow the cops access to inspect your station.

The solution is to not be under the rules of Part 95. Become a NON CB'er. Just don't get caught transmitting. Get rid of all your CB and supposedly illegal 10 meter stuff and use real Amateur equipment. Try using radios like a 940 or a 706 or a 767 ect ect. You can not be considered a CB'er for owning one of these and without actually getting caught transmitting can not be held under Part 95 inspection rules.

Further benefits include still being anonymous because of the lack of any Amateur license. You are now truly a free bander. Free of Part 95 and free of Part 97. Just don't get caught transmitting

To all those who couldn't admit that their "boxes" inconvenienced others, to all those who said this bill could never ever get passed because "no one in government gives a rats ass about CB", it's TIME TO FACE REALITY.

Deny THIS:

Wednesday November 22 2:43 PM ET
Clinton Signs Bill on Illegal CBs

WASHINGTON (AP) - State and local officials could crack down on unauthorized citizens band radios that interfere with consumer televisions, radios and cordless telephones, under legislation signed Wednesday by President Clinton (news - web sites).

The measure allows state and local governments to enact and enforce regulations that prohibit people from using unauthorized CB radio equipment, such as those that operate in excess of permitted power levels.

Existing law permits only the Federal Communications Commission (news - web sites) to pursue complaints of interference on the airwaves caused by radio equipment. But the agency does not always have the resources or field agents to investigate and act on every complaint, according to supporters of the legislation.
The House passed a final version of the bill last week.

Does the noise stop when you let off the gas?

Did you replace your plugs, wires, rotor, cap, points, condenser and such?
Make sure to use high quality parts and resistor wires and plugs.

> or another. Each of us who are hams but once CB'ers remember...

CB'ers can't forget the Hams that once a ticket holder, have a "holier
then thou" attitude. There are some that can "check their ticket at the
door" and I have no problem with that.

> The correct avenue to communicating for fun is amateur radio.

There are Hams that return to 11 meters because of the "looseness" of
the band. Conversations can be had without the limiting structure of
Ham procedure.

> One thing I do see here...you guys arent unable to get a ham license...you just
> seem not to have done so. Why not? Get away from the crap, the garbage...leave
> the psychologically challenged clowns who agitate and play silly games. Join
> the ranks of experimenters and contesters and public service volunteers.

Why join a rank of folks who perceive themselves as "better", just to
find jammers, kerchunkers, power players and other "psychologically
challenged clowns" who can't communicate to other people face to face?

If you want some examples from the Baltimore Metro area, feel free to
send me email. I'll tell you about attitudes, child molesters and other
stuff. I won't clog a CB newsgroup with that.

Message-ID: <o7o02t0q1em40gm78h3hs3m29vo7ischl2@4ax.com>
Source record: 60480

Greetings!

Yes, bearings and even driveshafts can make enough static noise to
create the effect.

If the brakes have been recently done, the shoe shims or retainers
should have a molybdenum or lithium based grease that is conductive
applied on the retainer cups. Not the pads themselves. It's to reduce
the effects of static on the shoe pads that use the retainers and to
prevent "squeals" when the brakes are applied.

As far as the driveshaft, check to see if you can have the mechanic
take a look and install a ground strap on the transmission housing to
ground and see if this can cure the problem.

Any tag-along wheels or axles that aren't grounded via either their
shafts or bearings to the frame are also culprits.

This doesn't rule out injectors and splitter transmission humps
either.

If the vehicle has been recently overhauled, someone may have forgot
to put something back on.

On Sat, 25 Nov 2000 15:12:52 -0800, while the modem was pondering it's
navel, "kEN" <ezwriter@prodigy.net> dissertated the following:

:+> This is in a big truck and driving me nuts! At idle, at a stop the CB has
:+> almost no static. When going
:+> over 15, 20 MPH the static is so bad thru the antenna the CB is almost

Not until this new law kicks in.......locals couldn't do anything
about inspecting a station. What the fuck would some local yokel cop
know about radio equipment anyway.

I agree, Peak, wholeheartedly. I have ALWAYS advocated antenna over power, but I think the time has come to let all those know who support this bill (if it exists) and similar ones like it, to consider THIS scenario. Most of you know where I stand on radio issues. I don't wander into ham bands, and I don't blast my neighbors with a gazillion watts. I've done the world barefoot many times over, as have many other ops in this room. BUT, if I ever get wrongly blamed or harassed directly because of a neighbor similar to what you have had happen, and I tell you right now, there are dozens of hams in the surrounding 10 mile radius, I will take down all my external antennas and put a directional in my attic, and I will get the biggest damn thing I can afford that will go into my 220 line! This type legislation will produce even more "criminals". The feds need money, what can we tap? Alcohol? Yea! Didn't work. Drugs? Yea! Didn't work. (Well, it kinda did 'cause the feds make billions off illicit narcotics) CB's? Ah hell, maybe that's the plan. I'm the paranoid one, remember?

My, such hostility. Particularly when hams had exactly nothing to do with it beyond building a 'safe harbor' for licensed services. The license on the wall solves the issue for the Amateur community.

As a practical matter, the local radio club more than likely has an interference committee that could get involved and would more than likely recommend a good lo-pass filter (or try one on the spot) while accumulating the down payment for a decent rig.

With the abolition of the Tech Plus and Novice licenses, the usage of export rigs on 10 meters should quietly fade into the sunset in any case.

BTW, don't assume that you will be investigated by a street cop. There are any number of special squads in larger cities and co-op arrangements in the boonies. There are any number of knowlegeable people on the politzia. Most of them are Amateurs but WTH.

It will require some time before your local council acts and the constabulary gets its legal act together.

Same old story, Tnom: Gadflies get swatted.

More than likely it will be investigated by a special squad of one officer
who will be an Amateur known to your victim. He will, of course, lack
jurisdiction, but will take the time to kill a coffee and enter your name on
the trusty 'freak file'. Probably make a check on 15 or 20 while
'verifying' the data for his report, too.

Quit while you are behind.

If a cop comes to my house for any reason and wants to come inside to snoop around, he'd better have a search warrant. By the time he gets a warrant my stuff will be unhooked and long gone.....

Look at the word ASSUME, you assume that the cops are RF Stupid or
unable to learn
about frequency counters, field strength meters and such. Most amateurs
(Hammies, hambos or licensed nerds) are familiar with such instruments
and most will feel free to share their knowledge with their LEO
buddies. When the small po-dunck towns learn about the FCC fee schedule
and how to raise revenue look for some Boss Hogg types to clue Roscoe P.
Coltrain into how to spot illegal ops from a mile off. The learning
curve will be going up very shortly so I am not assuMEing anything, so
those that ASSume may learn the problem with the word assume.

They're the Latin scholars, I sure as hell am not. But it is kinda cool for
a country with a language of Turkic origin I believe rather than the usual
Indo-European to put Latin news on state radio. I am not certain the
Vatican even does that.

Read the Bill, understand that most police depts work close with the
Office of Emergency
Prepardness (civil defense) and hammies are well known to them, so the
difference will be pointed out. BTW, Gary lives in Suomi (BTW-it ain't
even in North America) so the Finnish Dept of Telecommunications and
Posts is awaiting your call.

Finnish language is only close to Hungarian and not that close. Latin
is still in use in Europe, Especially in Civil Law Countries (all
countries except England (Scotland uses Civil Law mixed with Common) so
Latin is deeply ingrained (still dead after 1500 yrs) but the Vatican
does use latin as its language of reference.

".....the commission shall, to the extent practical, provide technical....."

Key word being "practical". Read: Never

".....local authorities may........"

Key Word being, "may" Read: It's beyond our control, we can't do it, so we are dumping it off on whoever we can.

This propaganda has been playing itself out for years. Sounds to me like they finally threw up their hands and conceded and are wording it in the ever-so-politically-correct manner as to pacify the squeaky wheel for awhile, mainly hammies, wihout offending. Why would I weep? I have been hearing this since the last solar cycle.

Only a small faction of flies get swatted. The majority carry on with their biological evolution. Around these parts, we are served by the sheriff only, and since the bill specifically states that locals MAY enforce, it does not require such. These 'ol badge boys ain't gonna worry 'bout no renegade cber in his car talking to Europe on triple five.

But Gary, how WILL the law distinguish between the two? It would have to, else I could, say for starters, get the ticket, have a Yaesu rewired so in order to get to the 11 meter band, you have to do some inordinary act to the radio, say like, key the mic and say "illegal mode" , or get maybe Blutarsky to add a voice regognition module to the radio. Talk on the 11 and freeband all day, and IF you get a visit, you invite them in for apples and show them your tic, show them your tic, show them your tic, and "legal" Yaesu with legal limit amplifier.

You are of course quite correct. But it is one of the reasons that this whole thing is going to prove to be a wet firecracker once the major boils on the butt are lanced. Even the FCC had no comment on the bill. Hope, however, springs eternal in the hearts of bozos as the IRS can testify so do not be too surprised if I am right for obviously the wrong reasons.

To get enforcement going you need ordinances, people to gather the evidence, and a lot of education for prosecutors and judges who wouldn't know Section 301 if it drove thru the courtroom on a Harley. The motivation for this would have to be fairly formidable. You might draft or hire the tech down at the Motorola shop that does your police radios (more than likely an amateur) and pair him with a cop who is also an amateur to be the 'radio squad'. Odds are the FCC data base from Maryland has most of the miscreants already; if we could track German subs from Grand Island NE within a square mile in 1940, only God knows what could be done today. Finding the bozos is no trick, it's the damn paperwork.

This bill got thru Congress in response to requests and bleatings that munis were powerless given FCC inaction to deal with local head cases and nuisances. While I do not think that anyone seriously believes that this is much of a solution it does offer a muni a way to attack the problem should it so choose and should it be willing to spend the money.

The fact that it got thru at all should cause some reflection. Obviously a number of lower officials are very frustrated with CB interference. They may be full of it, it may be Mrs Grundy more worried about unsightly antennas, but there is the offhand chance that there is some fire behind the smoke.

Be interesting to see what comes of it.

In my town the people who are causing trouble are the Hams, they cuss and talk local with 2kw plus. They fight day in day out for the last 2 years none stop. Those guys are a embarrassment to the service and keep me from wanting to have anything to do with Amateur Radio.

A. Feel free to complain. I am so legal you wouldn't believe it.

B. Give me a little warning to get the coffee pot on.

If you look me up on any of the databases, you may have to put a space between the Cs in my name; I've been licensed so long, that convention was dragged into the data base. It's N0BK if you don't want to work too hard.

Hit me with your best shot, twit.

What do you mean? I have a legal limit amplier with a pair of 8877's just loafing along at 2000 watts while my plate transformer is capable of withholding a 8KW dead carrier, but I would never think of running it that way. I have a big HF amp so I dont have to run it as hard, yeah right.

Hmm let me buy a car that knowing does 160 MPH to cruise the speed limit at all times, yeah right.

Hams are people to(did I just say what I thought I said, OUCH) who do the same things CB'rs do.

Gary,

But, also reading the bill, it plainly exempts licensed services. If a ham is breaking the law (unless I am mistaken) it has to be forwarded to FCC. Again the law is targeted towards CBers, and here's another BUT. If a ham is suspected of operating illegally, it may be that such offenses reported by LEOs might have a little more weight???? So you are right that a license won't "protect" him from prosecution.

I have said many times that I HATE this mess. It WILL cause trouble for legal CBers and hams alike. There will be innocent people mistakenly cited for interference.

Yes, and as soon as I prove that the yokels have no jurisdiction, I
will sue the hell outta the LEOS for illegal seizure, harassment, and
whatever my communications law attorney can think of.

Funny, I've talked to three local policeman. There responses to me were:

Policeman #1: What?

Policeman #2: Ain't gonna happen, Jeff.

Policeman #3: What?

Jeff

I have a very rare browning model 180 (AC) .Operates with 1-15 watts of rf drive. Band width is 25-40 mHz.Uses two 6jg6a tubes (new).Class AB1.Any offers over $350.before it hits e-bay.Would like to sell out right with out ebay.shipping is 23#lbs.buyer pays shipping.E-mail me at tipatcarmc@aol.com

6642. Enforcement: Congress OK's local CB enforcement

Newsgroup: rec.radio.cb
Date: 2000-11-25 04:15:58 UTC
From: (unknown)
Message-ID: <3a1f3cd6.504711695@news.mindspring.com>
Source record: 60376

Enforcement: Congress OK's local CB enforcement

Congress has acted to permit local enforcement of Class D 11 meter CB. Newsline producer Bill Pasternak, WA6ITF, has the details:

A bill sent to President Clinton for his signature could mean the end of illegal overpower operators on the Class D 11 meter Citizens Band. This, as the House of Representatives votes on Monday, November 13 allows state and local governments the right to enact and enforce regulations that prohibit use of CB gear that interferes with televisions, radio and cordless telephone reception.

Under existing federal law, only the FCC can pursue complaints of CB interference. But as hams already know, the agency does not always have the resources investigate and act on every case. So Michigan Representative Vernon Ehlers introduced bi-partisan legislation to add local jurisdiction after hearing from constituents that included concerned radio amateurs. All of them complained about interference to wireless devices traced to rogue Cbers operators.

The FCC does not oppose the measure which passed the Senate earlier this year. Nor does it preclude the FCC from performing CB enforcement on its own. Most important for hams is an exclusion to protect the rights of licensed Radio Amateurs that is included in the soon to be new law.

For Newsline, I'm Bill Pasternak, WA6ITF

President Clinton is expected to sign the legislation into law within the next few days.

(Newsline from published news reports)

There are a few problems with this. Has the bill also been passed by the Senate? Will the new president (whomever it may turn out to be) sign the bill? From where will the funding come? The law enforcement agencies all say they are strapped for funds.

I doubt if they are going to worry about a bunch of radio operators only causing interference to other radio operators. They are much more concerned about robberies, assaults, etc. They don't even stop any but the most hazardous traffic violators.

That is not a simple question with simple answers. Any such antenna
design is a compromise. You can obtimize the design for one or two
of the following, but not all of them:

forward gain
front/back ratio
side rejection
bandwidth

If someone files a complaint about the cber next door who is running an overmodulated high-power splatter box and is tearing up TV reception, they probably will investigate. If the guy is illegal, well who knows what action will be taken.

You're not unless you are a rabid DXer or Contest freak. I find it boring as hell myself.

Now when you are sitting on 20 in the middle of the nite and run a 3-way with a missionary in Peru whose wife is on the annual shopping spree and an SM6 (Sweden) who has been blown unceremoniously out of bed by the midnite sun (it was UCT 20 June) that is something to remember. The chat with a teacher in Townsville Australia. The bit of mail-reading between a W6 (CA) and a ZL2 (New Zealand) in which the Kiwi allows as how he is building a boat in the backyard and plans to sail it Stateside when he retires. When the W observes that the Kiwi must do a lot of sailing, the N-Zee comes back with "Actually never sailed a boat in me life but I figure to have a go at it."

And of course, when the local Clap Commissioner (Federal venereal disease control officer) and a few MDs get a bit clinical, it is a joy to behold.

Who knows, you may learn to love CW. The point is that it is a hobby with about 436 sides so hanging your hat on one is nonsense.

I have said it before. All it means is the cops will be able to get alot of cb and amp equipment. Now I have so many friends that are cops and guess what???
THEY HAVE ILLEGAL LINEARS AND THEY KEY DOWN TOO!!!!
ALL THIS MIGHT MEAN IS THEY WILL GET MORE AMPS FOR THE CREW!!!
The law fails to handle the fact that cops may be into this hobby as well. One thing for sure this wont affect my neck of the woods at all!!!!!
Too many cop friends!!!

Put it this way, the number of hams doing it is NOTHING compared
the the vast majority of illegal CBers doing it. And you know it.

If you are able to pick out a single guy who is acting badly then it isn't a major problem. Write your letter to Riley, send him a tape and it will get handled. With a ham population of
700,000, 1% would be 7,000. Do you seriously think that there are 7,000 guys on 75 meters generating the kind of trouble you suggest is occurring? Get real and do the math. They all sit there late at night and grumble about something, so jot down the calls of the 'bad apples'
and see how many you can come up with. It will be a short list.

I could do this out of the stuff that is sitting on the shelf and it cost much less that a thousand. If there was, say a $250 fine plus court costs for each violation, how long would it take to pay for the equipment, the police time, etc? Local government could make more money on a per infraction basis than catching speeders.

Not true. I am a licensed amateur operator who believes the amateur community has MUCH to fear with this bill.

Many hams thought they had "nothing to worry about" when states passed restrictive mobile scanner laws also.

More crap, piled high and deep. Nice that you put quotes around Completely. Perhaps some guys don't have a stop watch and ID after 10minutes, 30 seconds. You are yapping about intentional violation of the rules, not innocent or incidental violations, right? Then how many guys own equipment capable of 3800 watts PEP? If you hear guys say all the time that they are peeking at 3800 watts, care to share their calls with us? Send the stuff to Hollingsworth and he will do something about it. If 55% of all amateurs are capable of 3800 watts, as you suggest, that would mean that there are roughly 385,000 amps out there capable of that much power. Really? If you buy this, then I have some ocean front property in Kansas ready for your inspection.

SO TRIVIAL.

Oh thou great hammie, dost thou have to look so far down that nose at the lowly
cb'er.
It took many years of ham bitching to some toilet paper democrat in Michigan to
finally get this pushed through, many years of partisan and bipartisan
backscratching (I'll vote for yours if you vote for mine).
So thou great arrl hammies hast now influenced the rule to try to have more
immediate action taken upon thoust enemies..... oh how great thou must feel.
Thou self esteem soaring.
Dost though think this passage will stop freebanding? Exceeding 4w? Modifying
radios? Export radios? Amplifiers?
Occasional hinderances to some who go to the extremes or some that ignore
common sense neighbor relations? That's no different than you thou great one.
The same thing that calls the dogs out on cb'ers can call the dogs out on great
hammie, just different dogs. Who has more to lose oh great hammie?
Go back to your own kind, after all, why dost thou royalty mingle with the
peasants.

HR 2346 applies ONLY to CB and hams are specifically exempt. The point is, do you want Barney Fife to be able to cease your equipment when a neighbor claims interference? Of course the local cops are not going to triangulate, masturbate, or other wise discern the location of a CB operator. BUT! they will respond to that neighbor down the street who's stereo you get in to. Do you think you will be able to convince them that it is because the stereo is a piece of crap,? Nope! they will cease your equipment for "Illegal operation". Can you get it back? Sure if you want to spend the money for a lawyer...

6683. How will new local enforcement bill affect keydowns & competitions?

Newsgroup: rec.radio.cb
Date: 2000-11-26 00:00:00 UTC
From: toomanyradios@aol.com
Message-ID: <20001126103112.03349.00004525@nso-md.aol.com>
Source record: 60634

Does this mean local cops will now use their newfound authority to conduct "raids" on local keydown contests? Since the time and location of these events are widely published in advance, I can see where this could become a real possibillity. Especially if heavy fines (read: revenue enhancement) are involved. It would be like shooting fish in a barrel.

Comments?

writes:

>I could do this out of the stuff that is sitting on the shelf and it cost
>much
>less that a thousand. If there was, say a $250 fine plus court costs for each
>violation, how long would it take to pay for the equipment, the police time,
>etc? Local government could make more money on a per infraction basis than
>catching speeders.

Ah, so we get to the REAL reason for this bill: revenue enhancement, not law
enforcement. No wonder it passed Congre$$.

Usually those who think cops are dirty, underhanded and should lose their jobs are those kind of people who are are the law breakers and manage to become involved with the cops on a not to friendly basis.

HEELARIOUS !!! No, Scrary!!!! This is the most likely reaction. Any one with a antenna and a radio will now be a target. Period!! Legal or illegal, doesn't matter. If the complaint is strong and loud, you will receive the blame, for no other reason than convenience. It will be at your expense of money and time to prove other wise.

And listen to ANY cb channel and here the same thing on overmodulated rigs driving splatter box amps. I really get a kick out of how you cb morons pick a couple of ham frequencies where
granted there are some cb types who happen to have a ham license and act like morons, then scream about how bad the ham bands are, when 99% of the hams are operating within the rules.

I think you need to get off of your xforce service high horse as well . That is the only thing you can offer is service since technical know how is not part of anyones resume at xforce.
If you disliked daves stuff you would have to dislike the xforce line since we all know why.

Jr what exactly is a cb type? if it is a ham doing it, is it not a "ham type" Couldnt it be a Cber acting like a ham moron wouldnt you say?
Why would you degrade a fellow ham since if he is on 80 meters acting likae a moron he is probably a upstanding Extra Class licensee. Do i need to pick on your couple of frequencies on the ham band because it is almost the entire 1/2 of meg on the cb band. Of course we are not including 20 meters and the almighty 2 meter band. A ham has much more to lose and yet they will continue the foul operating practices and give there call sign right behind it, I mean Cbers are supposed to be stupid right they dont know any better What is the extra class and advanced hams fault? And 99% of the hams are right down there or have come from 11 meters and were or are doing the same thing you complain about

Go blow smoke up someone elses ass you are a troll by every sense of the word.
Whats the call sign OM? you seem to leave that out convienantly let us know who yuo are.

Martin I am sorry I deal with over 400 police depts and officers on a daily basis almost everyone is electronicly dysfunctional they dont know much about rf or electronics Now there are the exception a ham policeman but 99.5% don't have a clue they are many that call thier speed enforcement radar a radar detector, no stupid thats what the asshole who just went by you at 75 has a radar detector and i think will have thier hands full with learning how to operate there mobile cameras, the mobile cpu's, radar, domestic disputes, racial profiling, prostitution,burglary, drugs running rampart on the streets, and many other police related items to worry about how to do a rf stake out on Channel 19 villian Barney Rubble who is coming thru Mrs. Jones Tv . Yes the amatuer community may want to get involved since they will have a chance to play Joe Cop and get to bust a few Cbers so when they get on the repeater they can have there pencil pocket protector in one hand and there deputy badge in the other. What about the Cber who is operating fully legal and since he is coming thru a stereo or a tv will have to try and defend himself against these unwarranted intrusions on his life. Yes stock cb's do bleed phones and more electronics equipment. Does every cber and policeman now need to know Part 15 by heart that certain electronic items must accept unwanted interference?

Don't know. That's why I posted in the form of a question. I vaguely remember something somewhere about tapes made over the airwaves not being admissable in a court of law without express written consent of the party being taped. Maybe someone knows or remembers this, I dunno. It's not important enough to me to go research it, that is why I asked.

Please state where it is illegal to tape anyone unknowingly on the air waves. I can tape off the air all I want and it is not illegal. If taping off the airwaves is illegal, then there are millions breaking the law by owning a VCR.

> it beyond building a 'safe harbor' for licensed services. The license on
> the wall solves the issue for the Amateur community.

BULLSHIT! Maybe the Hams you know but not the ones I know. As mentioned before by another posting, Amateur Radio ops are a group. And all groups have a "Horses ass" amongst it (and if you deny this fact, you're a horses ass for being so narrowminded). The Hams I know do stupid stuff like jamming the local shit-talking channel with 60dbs of a 60khz tone from a SigGen, hold the grip bar down and turn the mic gain off while going shopping (found him in Walmart talking smack in the ladies underwear section), flipping my wife off as she was leaving the drive way (judging by the 55 coil on the Exploder) and so on so forth. Don't act like Hams are the most innocent people in the world talking about..."hams had exactly nothing to do with it beyond building a 'safe harbor' for licensed services." Yeah right...

> As a practical matter, the local radio club more than likely has an

>
> BTW, don't assume that you will be investigated by a street cop. There
are
> any number of special squads in larger cities and co-op arrangements in
the
> boonies. There are any number of knowlegeable people on the politzia.
Most
> of them are Amateurs but WTH.

Then this will open up a whole can of trouble. Discrimination against the "well within the parameter" CB operator and the not so "well within" operators. Just because the HAM is a Olice Posiffer, there should be no reason for such person to assume that all CB ops are illegal. But there must be probable cause for an inspecting team to enter the dwelling and/or station lawfully. Just because theres a MACO M108 out back on a 75foot tower dosen't necessarily mean the operator is a CB'er.

Hey

I have the following forsale:

1.) Johnson Messenger 100 - Has A,B,C,D,E channels on it, but you have to put crystals in them. It has the mic. I don't know if it works, because of no power cord.

2.) Johnson Messenger III - Has the mic, Has A,B,C,D,E,F,G,H,I,J,K.L channels on it (has to have crystals), I don't know if it works, because it also doesn't have a power cord.

3.) Johnson Messenger 110 - No mic- No power cord, I don't know if it works. Has A,B,C,D,E channels(has to have crystals).

4.) Jonhson Whiteface Base Station - Has mic, but no power cord. Has a channel 9 crystals in it. 5 channel radio

5.) Johnson Blackface Base Station - No mic, no power cord. has no crystals. 10 channel radio.

Johnson 100- $5
Johnson 110- $5
Johnson 3 - $5
Johnson Whiteface - $25
Johnson Blackface - $25

Email me know if your interested, I will sell them separate or as a whole group. Thanks

North GA. Buckaroo "223"

The last time I went to field day, I was listening to a guy trying to pull the call signs out of a pileup on HF. He would call, pull the loud out out, and I would tell him the call of one or two buried in the trash. After 2 minutes of that, he asked me my call. I told him I didn't have one, I am a CB'er. His nose went into the air, and he wouldn't look my way after that.

I also wrote: (but I changed my mind after your "holier then thou" attitude)

How about the ham that got thrown out of the ham shop after being caught trying to molest the owner's son?

See attitude story above.

I went up on a mountaintop with some hams during a VHF/UHF contest. They (and I) sure heard a lot of kerchuckers on the repeaters and intentional QRM on the simplex frequencies. Now tell me hambo's sh!t don't stink.

I don't know about other areas of the country,but here in East Texas,there are many cops who are using modified HAM 2M radios for communications with the agency they work for. 2M ham gear is NOT FCC type accepted to operate anywhere except 144-148,and license permitting,the MARS/CAP frequencies.I understand why the cops are buying the ham gear and using them,they cannot afford Motorola/GE/Jphnson. But,they are intentionally and knowingly breaking the law. So now,these same people who are illegally operating radio equiptment are capable of preventing others from operating their equiptment illegally. What a deal.... just another one of the great things that worthless president has done for the country......

Source record: 60671

As soon as you go to court, it is thrown out of court because the COURT HAS NO JURISDICTION. Now, if the flames can lower ... just for a moment ... I'd like to express my concern on the subject. Did anyone notice in the news that a computer manufacturer (I believe it was H-P, but could be wrong) has settled with the music industry and is going to PAY them something like $5.00 or $6.00 for every CD-ROM burner they sell (or put in a computer - as I mentioned, I just glanced at the article and do not remember details - I'd like to hear the details if someone can fill me in). The reason? People are using the cd-roms to make 'illegal' copies of copywrited music. The problems, as I see it, is why should the honest guy pay an extra $5.00 or $6.00 (of course, this does not include the inevitable mark up for more profit) because someone else puts music on a CD? They sure got the cigarette makers (this is a different story, but gave various groups some incentive) and I heard they are looking into the gun manufacturers (lotsa luck on that one!). Do you remember lawn darts? The real ones that were taken off the market because adults did not choose to supervise their kids and a few kids were hurt (and even killed). That was before they discovered it was more profitable to just sue and add to the cost of everything. I doubt many people worry too much about the amplifiers, but all you need are a few Aunt Tillies or Uncle Henrys getting upset due to telephone or television interference - and some people see an easy way to jump on the problem (they probably also smell money). My gut feeling on the amateur crackdown (and I doubt it has gotten to anything beyond a warning level yet) and probable CB crackdown is that too many folks found anyone could ignore the rules. That, per se, wasn't the real problem. The real problem is that a few folks figured that if the FCC didn't care, they wanted to be a disc jockey and start their own FM station! There have been fines, a few of the 'independent' broadcasters went underground and some are on the internet. Problem was that the FM station owners are largely large corporations with big pockets. Suddenly, the FCC is getting its' face rubbed with its' own impotence and probably feel (correctly so) that they are 'loosing it' if, indeed, they have not already 'lost it'. So, on top of the money angle, you now have a federal agency that feels threatened. It is likely the attitude of the unlicensed FM broadcast stations (yes, some were running fairly high power amps - which caused problems for the licenses FM stations - which have big dollars behind them - etc.) which has caused the FCC to at least threaten a big crackdown. One thing is for sure - if the FCC feels it cannot make a change, they will undoubtedly be knocking at congress' door showing letters from angry homeowners (read 'constituents' for Congress) and asking for a lot of money to begin real enforcement. Whether it happens or not will depend upon the FCC perception as to if people are falling in line or if they need drastic infusion of funds and start getting serious. This has little or nothing to do with amateurs or CBers in general - it has everything to do with complaints received by the FCC beyond what they are

capable of handling. My gut feeling is that this started when a fair number of people invaded the commercial FM band and took up broadcasting. That is when the FCC started looking around. One answer that they came up with was to pass jurisdiction of unlicensed services to the locals. That reduces their job considerably - but leaves the door open to the locals who might - just might - smell a lot of money to be made this way. Our arguing or fighting about it won't change a thing.

73s from Rochester, NY
Jim

Greetings!

I happen to agree, from personal experience, with your statement.

The cheap phones, TV's, VCRs, and anything else not properly designed,
will cause those complaints to require a follow-up.

Woe be they, the legal CB operator, caught in the middle of this mess.

Illegal operators, blasting off other operators that are simply
minding their own business, are the main cause of this situation. A
legal minded CB'er can't celebrate knowing that complaints that are
filed, and can be investigated. With the fingers pointed in the wrong
direction, simply due to a cheap electronic.

Part 15, 97, 42, 47 or 95 can't protect the CB'er from a neighbor that
has a bloody phone.

We'll just have to see who gets the chalk-white "X" one their backs
first...

Gary,

I've gotten a bit lost in all the posts, but the guy who says "I am the law" is the one I would worry about. I am sure he is not alone. However, those LEOs who would themselves break this law are NOT exempt from enforcement. I, if faced with this, would promptly turn HIM over to FCC and he would find out just "big" he is. If hassled by one of these types, after I got it straightened out, I would then hire a communications law attorney and sue hell out of him AND the agency for which he works. I respect honest LEOs, and they, fortunately, are in the majority. I fully disrespect a dishonest cop. Any cop who thinks he "is" the law and is above the law he is sworn to uphold is even worse than a civilian criminal. Those, I would do all in my power to see that they lose their jobs.

<< I don't know about other areas of the country,but here in East Texas,there are many cops who are using modified HAM 2M radios >>

I can see you guys are grasping at straws now.

Icom, Kenwood, Yaesu sell many public service VHF/UHF radios that are merely re-jumpered, slightly altered ham rigs (or visa versa).

But why go down that side road? The POINT is that a bill was finally passed. Why was it passed? Because hams hate CB? No. Many responsible people feel as I do, that there SHOULD be a little reservation surrounded by high walls set aside for unlicensed chaos, where "anything goes".

Problem is, too many folks have strayed from the reservation and/or their antics are being heard on the other side of the walls.

Read the following sentence carefully:

This bill was passed because there were too many complaints about yahoos cranking up their linears and showing up everywhere from 14 to 44 Mhz with their wacky modded radios.

The bill is targeted to let local cops eliminate splatterers and band-trespassers, especially when there is a complaint against them.

It is not intended to generate inspections of all radios everywhere.

Course, as an illegal cber, you'll likely bitch and squawk about technicalities in order to take the focus off your own activities (which is what all good criminal defense lawyers do).

Ben... THIS Ham agrees with you here... this legislation, however needed it may 'appear' (due to lack of FCC enforcement funding, etc) and regardless of any justification for it's passing, is going to open a Pandora's Box (Can of Worms, for those who are unfamiliar with mythology) which I believe Hams and others (commercial band radio users among them) will live to regret in the future (...assuming local cops actually DO any policing. I'd doubt it, but if the legislation allows for fines or other monetary reward, look for BIG trouble!)

Jerry,
It isn't a matter of protection or lack of protection. The reference to licensed service places the line at 28 MHz. If an amateur is operating within the limits of his license above 28MHz, then, yes, he is exempt from the law. No law is being broken anyway. If the amateur is violating a rule above 28 MHz, then he belongs to the FCC and is subject to their discipline. Since there is no licensing of private parties below 28 MHz, any operation there is illegal and subject to prosecution, but additionally, the amateur license becomes subject to loss as well. Note the recent and involved case from the USVI. CB by definition is a group of 40 unique frequencies in the 11 meter band. Any operation outside of these discrete frequencies, or operation on them with illegal power or equipment, would place the operator in violation and subject to prosecution. It's really quite simple: if one is operating at 26.950 or 27.990, then they are in violation. If they are operating with a tweeked radio or amp on 27.185 MHz, they are in violation of the law. If the operator is transmitting a 4 watt signal on an allocated frequency, he is most likely legal.

How is this enforced? If a knowledgable cop pulls up behind me at a traffic light, watches as I put a microphone to my face and key up, and then sees his velcroed frequency counter stick at 27.555, and then look at his field strength meter peg, that's about all the probable cause he needs to do something.

Greetings!

Read the typical FBI disclaimer on any VCR tape.

And unless you like to get sued for slander under "out of context" -
the issue of taping is a private in-home, personal use, issue.

Unless you're willing to face the music, making a recording to be used
for personal gain, or cause defamation, needs documentation and
disclosure for personal protection of the person doing the recording.

Any of you watching those daytime talk shows, realize that any guest
is obligated to sign a waiver to protect the broacast or station
involved in taping, from liability caused by incidents or commentary
that can cause defamation or slander.

As far as a Federal issue, it can be cited by Federal court, but a
Civil issue of slander is a one to one basis. Both can be made
separately. One person gets slammed for alledged illegal use, by
another recording the act, can place themselves in a civil court later
and request to seek restitution for losses incurred - especially if
the Federal charges were dropped during the process.

It's just one of the ugly sides of having a neighbor turn into the
enemy if this bill is taken too far.

On Sun, 26 Nov 2000 17:18:58 GMT, while the modem was pondering it's
navel, JR <jr@some.net> dissertated the following:

TW,

I don't know about the legality of taping someone over the air, but I do know that FCC sometimes asks for tapes from complainants to use, I assume, to ascertain whether something illegal has occurred. Whether it is admissable in court, I don't know. My opinion is that, since radio transmissions are interceptable by anyone, it **may** be legal. It's a little different than taping a PRIVATE conversation without the "tapee's" knowledge. ???????? Just don't know.

WB,

I fully agree that rights will be trampled on with this law. One reason is, as you said, most cops wouldn't know an IC706 from a DAK. The other reason is egos, or "rambo" cops that will not accept any proof of their lack of authority over hams, will take ANY objections or attempts to prove the operator's innocense as "contempt of cop". They will not know about Part 15 regulations. They WILL see an antenna which, again, they have no way of knowing the difference, and "bust" a legal ham or CBer. I would hope that hams would NOT help them with this simply for the fact that somewhere, sometime one of their own will be mistakenly hassled, ticketed, and/or have their equipment "stolen" by some swell-headed cop. When that happens, I hope that the legal CBer or ham takes the local government to court, as well as the LEO that, himself, did an illegal thing by overstepping his authority.

What I at least intended to say is that the Amateur community had nothing to
do with passing this bill but rather found a way to wave the cape and let
the bull charge by. If you are expecting me to argue the virtue of one
group vs the other you will wait a long time. Any time you put a mike in
front of a bozo, you just get a louder bozo.

> tower dosen't necessarily mean the operator is a CB'er.

No, it just means that a very large number of technically competant people get ham tickets along the way. Stop by your local business radio service facility or broadcast station for that matter and the guys with the soldering irons have a pretty healthy percentage of ham tickets. It is just the way things work. You've been hanging out with Techs who get a big kick out of talking to McDonald's drive-thru window far too long. Now with MURS you can talk to Mickey D's without a license.

Actually, a sidebander on 555 had better hope for an experienced amateur. The guy who comes roaring in with a checklist will eat him up; the local ham will probably just say piss on it charlie, this idiot is no threat to much of anything and move on to the real cause of Mrs Grundy's TVI. Now the guy with the modified President Clinton Mark II and 17 sweep-tube line-ee-ar is going to be hung by the jock in either case but the more experienced soul will make sure there is no crime left uncharged and no hardware not sent to the crusher. He will also make sure the 75 foot tower gets a thorough inspection from the Building Department.

By and large the Amateur community doesn't give a rusty hoot about CB or any operation so long as it stays below 28. All misdemenors ultimately boil down to some combination of rank stupidity and lack of class; high channel sidebanders aren't in a league with most outlaws.

The last time I went to field day, I was listening to a guy trying to pull the call signs out of a pileup on HF. He would call, pull the loud out out, and I would tell him the call of one or two buried in the trash. After 2 minutes of that, he asked me my call. I told him I didn't have one, I am a CB'er. His nose went into the air, and he wouldn't look my way after that.

I also wrote: (but I changed my mind after your "holier then thou" attitude)

How about the ham that got thrown out of the ham shop after being caught trying to molest the owner's son?

See attitude story above.

I went up on a mountaintop with some hams during a VHF/UHF contest. They (and I) sure heard a lot of kerchuckers on the repeaters and intentional QRM on the simplex frequencies. Now tell me hambo's sh!t don't stink.

I called my local police today and inquired about the new law and a noise that I was receiving in my phone by a near by supposed radio operator and his response was, " Sir there are new laws put into effect every day that we barely can keep up with, we just take each call by priority and public nuisance is not top on our list. People have welders, compressors, stereos, and dogs that make noise, that's what the have home owners associations for."

Quote on quote fellas,
KRS

6734. Re: Enforcement: Congress OK's local CB enforcement

Newsgroup: rec.radio.cb
Date: 2000-11-26 00:00:00 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3A217AA7.49F6@bellsouth.net>
Source record: 60685

And there are some of us who ARE authorized to operate outside of the
"civilian" HF bands. My ham rigs are modded to do just that. However,
their operations are governed by NTIA (Nat'l Telecommunications & In-
formation Agency) same as any other US military/gov't stations and meet
even tighter standards than for ham. So when questioned, I show my
license for THAT! I especially enjoy checking into FEMA test exercises!

Do you honestly think a policeman is going to now have a freq counter and a field strength meter on the dash of his car. Please get real. This law just gives them the right to now legaly do something about rfi etc. I honestly dont expect them to start riding around looking for antennas etc But if they recieve a call from a town resident they now have some backing and authority to at least investigate and hear the complaint. there is no life and death situation involved here If they have time to check out a complaint i think they may I dont think they are now going to be set up with cb radios , freq counters, and field strength meters in the car I just dont see it happening. Now if there is a persistent problem in theier area They can check it out without waiting for the FCC to never show up. Thats All dont read anymore into it that there is.

If your locality features a "corrupt Bubba sherrif" and a force of "ignorant deputies" - I'd say a new CB regulation is the LEAST of your problems. If these guys are as bad as you say, I'd fear violation of more basic civil liberties.

Go to the mayor. Or the town or city council. Demand better quality, more intelligent, fair-minded public servants. If that doesn't work, vote these guys out. Or take action at the state level.

Don't just sit there and complain.

Get six Uniden pro510xls, put 5 of them in your different vehicles use
Wilson, k40 or 102" whips for antennas on the mobiles. Pick up an A99 or
maco 5/8 wave for your base get it atleast 18 feet off the ground. Now for
your power-supply on the base radio. Use either a 1.25 amp 12 volt power
supply or a reasonably charged 12 volt car battery with a small trickle
charger. This is about as cheap of a set up that will get the job done for
you.

>deal.... just another one of the great >things that worthless president
>has done for the country......

I worked for a Two-Way radio shop a few years back and over a period of 5 years watched over one thousand Yaesu, Kenwood, and Icom hand-held radios sold, modified, and used for UHF Police band. These cops bought the radios because they were affordable and were much more reliable than the worn and very old GE's that they were issued. I always wondered if some Johnny Cochran type lawyer would get some scumbag drug dealer off on a technicality because he was busted by a cop with a non-type accepted radio. Sounds rediculous but you never know what can happen in todays litigious society.

This Bill was totally unnecessary- Read the 10th amendment:

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

The 10th amendment already gave local municipalities the power to do this as well as anything else not outlined in the Constitution. A few local municipalities as far back as 25 years ago have already made legislation banning illegal CB's, scanners that could hear law enforcement, ham rigs that go into public service bands, etc. Be careful..... they might ban rec.radio.cb next!

My two-cents worth,
Jim

Well, at least these guys will be glad to discuss how to get more out of their equipment when they respond to a call about yours.

The door always allows for the installation of hinges that swing both ways.

The easiest way to diffuse the situation is to start a discussion with them over equipment that they operate as a second defense to protect their own lives. At this time, it becomes self-defeating to eliminate a citizen that could respond to an "officer down" call on back channels.

When one law enforcement agency has a life saved via use of CB operations, it becomes first on the protected mode list and high on their priorities to ignore any detriment to that safety net; i.e. the myopic whining of others....

When an issue becomes emotion-driven, drive it with emotion, and steer it's destination.

I have an inch too much coax in line. It is so detrimental to
performance, I could just cry... <g>

More seriously, the length of the coax does not matter if your SWR
is good. If the input to your amp is mis-tuned, then coax length
can appear to correct any problem. If that's the case, take your
setup to a competent tech for adjustment.

If your output SWR changes with the amp on, the output may be
mis-tuned or you are sending harmonics out of a poor quality amp.

I have never seen coax length make a lick of difference in my stuff.

WHAT??! Reliability is why I left Ford behind many years ago! One of my cars is an old '87 Celebrity wagon with 198,000 miles on it. I bought it new. The engine/tranny has never been opened for anything except routine service. All other bolts, screws have never been moved since the day they were installed. It goes day in, day out--and I find myself driving it more than the other car--a '93 Lumina Z34, which BTW, also gives excellent service. Of course, one of the reasons is that it is my radio car and I kinda miss my mobile.

I don't "hate" Ford, but over the 27 years I have driven GM, mostly Chevrolet, I can't think of one thing about them to kick about. When I had a Ford, I just got tired of being Found On Road Dead! LOL!

Just retune the antenna. Antennas are affected by their height above
ground, so when you change it, you may need to retune.

6760. Another amp ?

Newsgroup: rec.radio.cb
Date: 2000-11-26 00:00:00 UTC
From: "Scott (Unit 69 Chesapeake Bay)" <upplus@hotmail.com>
Message-ID: <3A21B701.B60DB02B@hotmail.com>
Source record: 60811

Is the input capacitance of a amp with multiple 2 pill sections
additive?

In other words, does the capacitance across the input transformers
affecting the whole tuning of a multi-pill amp add up in parallel?

I'm playing to learn. Hands-on is the only way. It's only smoke! <g>

Now that I've got that ham's two pill working good, it's time to
tackle a four-pill that sounds like crap. The hams know I have a
better track record on these things then most hams in the area.

Thanks in advance for your response.
(My email is valid if you don't want to respond here. I understand,
too many trolls and hamcops.)

Yea, Jerry, I think I may have that confused with the private aspect of taping. Public domain is probably different. I didn't know the FCC sometimes asks for tapes from the public. I do know that many tapes have been sent to the Feds about cbers for this and that, and a letter sometimes received by the sender explaining the usual stance on the position....other than that, I have no clue, but there is a law somewhere, about taping someone, without their consent. This is even covering new ground in the court systems with video taping.

C'mon Bill. A T+ who hasn't obtained a General by now is either dead or disinterested. Novices who haven't taken the upgrade are more than likely dead or disinterested. Abolition is the wrong word and you are correct but for virtually all intents and purposes, they may as well have been. The run-off should be rapid in practice awaiting only expiration from the FCC file to make it official. The point was and is that for someone not restricted to 10 meters for his HF fix, an 'export' radio is a joke.

Having just finished completion of my Thanksgiving tasks, I can assure you that this ham is well aware of the oderifious nature of his excretions.

But like the Wizard says in the wizard of oz, the only thing I have that you don't is a license.

I have already been asked by a local police officials if I would be willing to work with them on a couple of interference cases. It is one of the things I do for hams as well as an ARRL appointee. I don't know what other jurisdictions are doing, but!, I can assure those that asked, I do know the difference between a power supply and an amplifier. Am I out to get CBers, Heck no! Am I out to get those that grossly abuse the system by running splatter boxes and playing radio Rambo... You Bet!

How many street cops do you know who can tell the difference between a Texas Star 250 and a Pyramid power supply? Both are approximately the same size and connect to the back of a CB radio.

Or, what if the "culprit" is a ham operator, LEGALLY operating that "export rig" and broadband amplifier on 10-meters?

Here is another problem: the recent, apparent declaration by the FCC, eBay, etc., that certain 10-meter radios are somehow "illegal" to possess or sell.

I own a Uniden HR-2600 which I use regularly on 10-meters. This radio has NEVER been used outside of the ham band. In fact, it isn't even CAPABLE of operation outside of 28.0-29.7Mhz. (As most of you know, the 2600 is not an easy 11-meter mod like it's 2510 cousin. Requires changing the microprocessor chip for extended frequency coverage.) This radio was purchased new in 1990 from an amateur radio store and even has an FCC TYPE ACCEPTANCE certification attatched to it. Now, how the hell is this an "illegal radio?"

>

It's exactly *because* "no one in government gives a rats ass about CB" that this bill was enacted. Specifically, it allows the FCC to shirk it's enforcement responsibilities and pass the burden on to local law enforcement. Since no money is being provided to said federal agencies for this, it is yet another example of an unfunded federal mandate.

One of two things will now happen, depending on the locality. In some areas, this will receive a big *YAWN* from local cops who have more important things to do with their time. Things such as apprehending murder suspects, rapists, drug dealers...you know, the things they were hired to do.

In other areas, cops with too much time on their hands will now use this law as a tool to go after anyone who has an antenna on his house or car. To the hams who have been cheering and gloating over the passage of this bill, I offer the old saying "Be careful what you wish for...you just might get it." Have fun defending yourself in court (often at considerable expense) because Mrs. McGillicuddy down the street reported you to Officer Friendly as "that guy on the CB who is messing up my TV picture." If you think the average street cop can tell the difference between a Ringo Ranger and an Antron 99, you're kidding yourselves. The guy with the closest antenna is going to get the citation. Then, the burden will be on YOU to go to court and prove your innocence via your ham license.

Don't think this will happen? Come back to this newsgroup in a year and tell me I'm wrong.

Exactly. The group of Hams on this ng praising this bill, obviously doesn't realize what they have to loose. Sure this bill was aimed at cb'ers, but the public and local law most likely doesn't know or care about the difference between cb and ham.

>know about radio equipment anyway.

Little or nothing. So, they'll take the path of least resistance. Confiscation of your equipment and/or a citation for what they believe to be illegal activity. If you're legal, YOU get to incur the time and expense of going to court to try and prove your innocence. Guilty until proven innocent...eh, Comrade?

>What a commie law !

I believe you have stumbled upon what I consider to be the true intent of this law: to ultimately cause a substantial reduction in the number of American citizens who own radio transmitting equipment.

Just as with firearms, private ownership of a radio transmitter enables freedom and thus is seen as a threat by many government officials.

Here's the actual law. Note how the hams are exempt as they have an FCC license as mentioned in section 2 .

One possible solution is to get a Techician license even if you never use it. If the local police come to your door, just show them the license and explain they have no authority over you.

.....
Section 302 of the Communications Act of 1934 (47 U.S.C. 302a) is amended by adding at
the end the following:

`(f)(1) Except as provided in paragraph (2), a State or local government may enact a statute
or ordinance that prohibits a violation of the following regulations of the Commission under this
section:

`(A) A regulation that prohibits a use of citizens band radio equipment not authorized by
the Commission.

`(B) A regulation that prohibits the unauthorized operation of citizens band radio
equipment on a frequency between 24 MHz and 35 MHz.

`(2) A station that is licensed by the Commission pursuant to section 301 in any radio service
for the operation at issue shall not be subject to action by a State or local government under
this subsection. A State or local government statute or ordinance enacted for purposes of this
subsection shall identify the exemption available under this paragraph.

`(3) The Commission shall, to the extent practicable, provide technical guidance to State and
local governments regarding the detection and determination of violations of the regulations
specified in paragraph (1).

`(4)(A) In addition to any other remedy authorized by law, a person affected by the decision
of a State or local government agency enforcing a statute or ordinance under paragraph (1)
may submit to the Commission an appeal of the decision on the grounds that the State or local
government, as the case may be, enacted a statute or ordinance outside the

authority provided
in this subsection.

`(B) A person shall submit an appeal on a decision of a State or local government agency to
the Commission under this paragraph, if at all, not later than 30 days after the date on which
the decision by the State or local government agency becomes final, but prior to seeking
judicial review of such decision.

`(C) The Commission shall make a determination on an appeal submitted under subparagraph
(B) not later than 180 days after its submittal.

`(D) If the Commission determines under subparagraph (C) that a State or local government
agency has acted outside its authority in enforcing a statute or ordinance, the Commission shall
preempt the decision enforcing the statute or ordinance.

`(5) The enforcement of statute or ordinance that prohibits a violation of a regulation by a
State or local government under paragraph (1) in a particular case shall not preclude the
Commission from enforcing the regulation in that case concurrently.

`(6) Nothing in this subsection shall be construed to diminish or otherwise affect the jurisdiction
of the Commission under this section over devices capable of interfering with radio
communications.

`(7) The enforcement of a statute or ordinance by a State or local government under
paragraph (1) with regard to citizens band radio equipment on board a `commercial motor
vehicle', as defined in section 31101 of title 49, United States Code, shall require probable
cause to find that the commercial motor vehicle or the individual operating the vehicle is in
violation of the regulations described in paragraph (1).'.

5 miles wouldn't be a problem at night but during the day when you have 9
s-units of noise five miles is at your limits. I would either use cell
phones or the nextel phones with the direct connect 2-way feature. Or
another option would be 2-way pagers.

But if you are still hell bent on getting CB radios then get seven uniden
pro510xl's and a 3 amp power supply to use one of those radios for the base.
As for antennas, 5 foot loaded antennas, like the firesticks for example,
would work on all the mobiles and something like an antron-99 for the base.

after all the time and money invested in all those radios you could have the
cell service on those nextel phones

If you read the law, that license will do you no good. The law addresses the use of CB equipment used illegally on frequencies other than the legal 40 channels. If an amateur is transmitting out of band, then he is just as much in violation as a CBer who is operating out of band. Neither is authorized for those frequencies, and the law should draw no distinction between the two.

There is the clause in the bill nullifying the amateur, or any other licensed radio service.

Since they don't issue licenses for CB any longer ,and all licenses that where once legally obtained have since expired, CB is an "unlicensed radio service"...

However, in the legal mumbo jumbo, it also states that by transmitting on 11 meters with a radio makes you a "legally licensed Citizens Radio Service" operator, and subject to the rules voluntarily.

This could be a fun one in the courts, but the bottom line would be the asshole loses his shitty amp anyway.

No, pretty soon, all you will be able to do is operate legally with 4 watts AM and 12 watts side band. The law has no affect on anyone at all other than people who operate illegally. If you operate an off the shelf radio, you are legal. If you have had it in a chop shop for tweaking, it is quite likely it is operating illegally, and if you have an amp in line, well .....

Not true. Read the law. A compalint from a neighbor e.g. TVI does not constitute probable cause.

What a load of crap. Either you operate legally or you don't, and if you don't, you fall under the law. A duck doesn't have to call itself a duck to be a duck.

Humm. How do cops know about drugs, jewelry, vice, embezzlement? They have specialists, just like every other profession. Think every cop walks a beat?? Most departments have enough officer/CB or officer/ham types to use for this sort of thing. It might be a challenge to determine if some guy is radiating 6 watts instead of the legal 4 watts, but that isn't going to be the problem which is enforced. The problems will be guys like those hanging out on 27.555, telling everyone they own the frequency and others crying like babies for hours on end. A good directional antenna will get anyone with a shouting distance of the transmitter, the counter will tell then what frequency he is operating on, and the field strength meter will tell them he is using illegal power. That's plenty of evidence to present to a judge.

Are you sure the 2600 falls in that category? They have a list on their web site somewhere. The issue is with transceivers designed so that all that is needed to convert to 11 meters is the change of a jumper, etc. Five minute operations with no soldering required.....

The radios used on 11 meters must be certified for 11 meters, and must not be capable of operation out of band. If the radio was sold for 10 meters was was very readily convertible to 11 meters, then the requirements of the law have been thwarted. It is legal to convert an 11 meter radio for pure 10 meter use, but not the other way around.

>licensed radio service.

Tell it to all the hams in places like Indiana, Kentucky, Michigan, New York, and other areas with restrictive mobile scanner laws. In nearly all cases, possession of a valid amateur radio license grants an exemption from the law. Even so, there are MANY cases where hams have shown their licenses to the arresting officer...only to be told to "tell it to the judge" as a citation is issued and their radios confiscated.

This law will work the same way. Guilty until proven innocent.

Last time I checked, all Tech + and Novice licenseholders were grandfathered
into the new license structure and would keep their privileges indefinitely.

Of course, these aren't the only hams who use such radios. I know several
General and aboves who use these radios in their vehicles for inexpensive,
reliable communication on 10 meters. I don't know too many who drive around
with full-coverage HF radios mounted to their dashboards.

Not at all and listening to a few of the many, many ham frequencies will prove that there are bad apples in the ham barrel also. However 99% or the hams operate completely within the FCC rules, not so with the cb crowd, more like 99% don't. There is the big difference.

Yes. The Uniden 2510, 2600, and Lincoln are all listed.

Ironic how the Realistic HTX-100 (basically a 2510 without AM or LSB) is NOT
listed, yet is capable of easy frequency conversion.

What is the limiting structure of a conversation on the ham band, you can discuss anything you want, all you want, the only structure is an id is required every so often. What is limiting about that? Now if you say that vulgar and profane language, threats, intentional interfering, over modulated radios that splatter all over the band are limiting structure, then you are correct,. those things are certainly frowned upon on the ham bands. Now before you start saying anything about listening to certain frequencies on the ham bands where you will find some morons acting that way, I said it is frowned upon and you won't find it on 99% of the ham frequencies.

Amateur radio is a group of people...there are horses asses in all groups of people...a ham who is holier than thou toward CBers would qualify there... That does not erase the truth of what I originally said. Also, there are zillions of mHz of Amateur bands...only a few CB channels...it is easy to find your own "campsite" in amateur radio and bed down.

Let's face this with truthful hearts: Most CB'ers operate illegally in one
>form
>> or another. Each of us who are hams but once CB'ers remember...

Except for one big difference. Radio transmissions are trivial and
can be done in a way that will not harm anybody. Ever go 60 mph in a
55 zone? Ever buy 13 items in the 12 item line? It's in the same
category. The "who cares" category.

Is October of this year 'old news'? That's when the bill was passed
by both houses and presented to the president.
Try this;

<http://thomas.loc.gov>

type in the bill number. When the page comes up, click on #6.

Hate to tell you but that Technician license doesn't mean squat when you operate power on a CB band or out of band transmissions. Hell, grab that license and wipe his ass on it. Most cops that I know of dont know squat about radio other than how to key them up for their police transmissions. Lets see, the rapists, theives, and other social degenerates are running around. Were going to focus on Joe Sixpack with his CB that runs 50 watts and his amplifier. Yeah, right. It will last as long as the cops see an incentive for it. Otherwise, it will be another law on the books for frivolity. Kind of like the 20000 gun laws and politicians tell us that we need more laws.

TooManyRadios,
Been to court (twice), took about 15 minutes, case dismissed.
That was before H.R 2346, when P.L. 97-259 was all that was required
to show that the 'local' courts had no jurisdiction for an RFI
complaint. H.R. 2346 should make it even easier. If your not doing
anything wrong, why worry about it?

It's hilarious to see the reactions of those who stand to lose their big splat boxes or funny channel radios.

I love seeing the descriptions of law enforcement procedure and opinions on legal process - written by people who's knowledge of the law comes primarily from watching old episodes if SMOKEY AND THE BANDIT.

*One genius thinks the cops are too stupid to understand radio - so there's no need to worry. LOL.

*Another knuckle-dragger assures us this "law" won't be enforced ANYWHERE because it's low-priority, like jaywalking. YEAH RIGHT. That's why two branches of the legislature passed it and the President signed it - cuz it's SO TRIVIAL.

*Yet another loser wants to bring nuisance suits against legal hams so he can continue his illegal operation. WAY TO GO, RETARDO. READ UP ON THE LEGAL SYSTEM.

*The most brainless of all of the bozos attempts to provide a solution whereby he urges others of his ilk to get a ham license solely in order to operate illegally on 11 meters. SMART GOING GUYS. Hams risk getting popped by the FCC, especially bad ones.

A number of other "solutions" proposed by the peabrain bunch in this NG include:

-falsifying a ham license (AS IF cops wouldn't cross-check the computerized database)

-hurry and hide the amp from the cops before they enter and find it (DOH!)

-showing the cops a handgun permit and acting tough (Oh YEAH. Sure. THAT'll work)

But the MOST HEELARIOUS reaction I hear from these goobers is the kind of desperate propaganda floated out there in the last 24 hrs. to attempt to convince licensed hams that this HR2346-equipped Police State will run roughshod over the peaceful citizenry and make life a living hell for legally-operating amateurs.

LOL!!!!!!!

Keep 'em coming!!!!

Greetings OMT!

The problem with CB's and Amateur these days, is the ego trip that people take when they "discover" radio.

I'm quite sure you, and myself is included here, wanted to be heard the first time we got on the air.

We took the time to put up the station the best we could with what we had to work with. And as new things go, there's always somebody else that doen't like what we have to say. Even our conduct is scrutinized by others that have less scruples and morality to consider the consequence of their actions.

Hence the "jamming", bleedover, "squash" and other such effects.

It has become an upward spiral, a congested band full of noise from other users that aren't even close to our locations, that rain down their RF spray into our receivers. Some of those CB'ers that are still out there have replaced their "simple systems" with more current hungry amplifiers just so they can still be heard.

It's not the radio that is at fault, it's people that have no consideration for their fellow man - that caused this bill to be made up and such a hot topic.

People took their freedoms too far and those few that cause the problems that made this bill possible, are to blame. Some of us are just those that are saying "Hey, wait a minute!".

The wide availability of devices that have caused this problem to be rectified like this, makes the temptation of being "number one" too easy.

To be honest OMT, as a legal operator, that dabbles in electronics, I am chastized and blasted off the air by inconsiderates all the time.

In fact, many "weak stations" aren't weak at all, they simply run legal power and equipment. They don't have the time to play around with stuff, they know, can get them into trouble.

The biggest complaint they have about my station is that "you're too weak, mud duck, get a linear - I've got one I can sell it to sell ya'."

"No thanks, I have neighbors." I reply. Since they don't come back with any other commentary, I think I've answered their questions.

The other happy ending to this story is, I have neighbors that are neighbors, and they're not bothering me, or I to them.

I'll continue to run my station the best I can. I would like to see other people try this, and stay legal, as I've learned how to.

300 watts from a station, can still be quenched with a 4 watt carrier from a closer station. As long as that can still be an effective tool against inconsiderates, I'm all for it. I'd rather have more 4 watt stations talking about what is on their minds, than an inconsiderate, ETOH-loaded DB'er that should go to a bar and have their face smashed in instead.

Thanks for the update. Now we know. In any case, having encountered Finnish in my Wisconsin days you have nothing but my respect. It is tough enough to switch between say English and Spanish where the main (although no longer invincible) Party Revolutionary Institutional, PRI, becomes the Institutional Revolutionary Party. Where the connection is more remote than that, it has to be difficult to shift the thought processes. You, at least, get something it is difficult to find here -- opportunity to practice.

I still think you are pumping bullets into a dead horse but I certainly admire your ability to do it in very good English.

I used to work lots of CB, the legal kind, but got bored of the constants shouting etc. My CB handle was "Karppi", 4w out into a 5/8 vertical, back in the 1980's. Maybe you just don't get it: legal CB is quite alright, nothing wrong with it. On the other hand, you should lose your ticket if you work illegal CB or use too much power and so on, even if you are a ham. Copy?

Well naturally. We are not supposed to talk to unlicensed
stations. There's nothing smug about it at all. You weren't supposed
to be there and were transmitting illegally. What part do you not
understand genius?

Any ham not renewing because of this is an idiot. They have nothing
to worry about if they are running legally.

As for the CBers, less of them means less trouble on that band which
can only be a GOOD thing. Ham radio a dead hobby? Not in the least...

I agree I think we all should go out and buy the biggest baddest coil antennas out there mount them on all our vehicles and remove all radios when they pull you over because he thinks you got a 2kw amplifier in the trunk, When no radio equipment is found and fear of a harrasment suit let this happen a few times they wont be pulling to many cbers over then.

Well, just for the sake of stirring the pot while the conversation is still going well, someone made the excellent analogy between this law and the drug war, and a few alluded to the potential revenue. What the hammies that are so quick to offer assistance to the cops in busting cbers are forgetting, is after cops make a drug bust, the undercovers that worked on the case are usually reassigned to protect themselves, their family, and identity. After you "assist" in popping your renegade neighbor cber who has a modded radio and peaked out it does around 25 watts, y'all are forgetting. Word's gonna get around quick, you are not to be trusted, 'cause ya' just might call the zoning and building inspector on the guy that just did some remodeling or the person who has the RV that is technically disallowed by the homeowners association and such. These folks you gotta live with, you are not getting transferred...hence the possible retribution factor. Liken it to the former druggie that got popped and turned snitch. They use (read: whore) the poor sap until he is no longer needed then discard him and throw him back to the wolves.

I pretty much agree it is scare tactics at best, more than 4 watts is still illegal, out of band is still illegal etc etc . This only allows the cops a chance to "check out" the complaint. If you talk skip in a parking lot and are bleeding over the pa system of a store the cops get a call about the interference they can now act upon it and come out and see what is going on Imagine living next to a cber who runs a few watts you go to get on your phone and he is there again, your stereo only picks up your calls for dx, When we complain it went to the fcc and then no one did anything about it. Now when you bleed over something and your neighbor calls Johnny Law he can come over and treat it like any other "noise" complaint and investigate the problem. I dont think they will be patroling the streets with a group of vigilanties looking for cb antennas If you give someone a reason to complain they will be able to check it out now .....just my opinion..

Fred slow the fuc. down you over zealous cop wanna be maybe 1/2 % of the cops in our state have a cb these are the ones near the interstates all other have more shit in the car like radar, in car video, computer 2 ways radios light controlers i highly doubt they will now be outfitted with cb radio they have enough problems with them now maybe some of the backwood police depts in your area may have cbs but dont expect a trend. There is more than enough revenue busting drug dealers, pulling over speeders, shoplifting, robbery etc etc , than a fine to a cber operating on 27.555 Hope you get stop by a cop and have your vehichle searched because of your 2 m antenna and him thinking it is a cb antenna

I have a plethora of old CB radios here that are used for parts...
As a courtesy to this news group for letting me post my radios for sale here, I am opening my parts bins up to you for this holiday season! If you need an unusual part, I may have it. I do not have parts for the high end radios of today but I do have a lot of parts for radios of yesteryear. If you are trying to restore a radio and run into trouble finding parts, just send me an email and I will see what I can find for you. I have Meters, Knobs, Transistors, Transformers, IC's and the like. I will not charge for this service (other than the shipping) but any donations for my trouble will be greatly appreciated. Once again I would like to extend my thanks for your continued support.
Mike, The Antenna Man

Compared to all the ham newsgroups, all the holier then thou assholes
have jumped on the rec.radio.cb bandwagon because you must have run
out of licenses to wipe your ass on.

(My apologies to the good hams.)

I need a 3 inch speaker for a PC-122. Round with the ear mounting holes.
(Does that make sense?)
Thanks in advance. Email me for any other info.

I'll be back later, gotta go make my dough for the day...

Hi Mike,

I need some CB repair/resto parts, as follows:

Johnson Messenger 323:
- Speaker (mounts in the side of the cabinet)
- Audio output transistors

HyGain III:
- Concentric volume pot and knobs

Tram XL-5:
- 11.750 MHz crystal

Knight: (various tube models)
- two black bakelite knobs

Lafayette Comstat:
- Top cover from Comstat 23, Mk5, Mk6, 25, 25A,
Teaberry Model "T", Robyn T-123/A/B, perhaps
others. Okay if it needs a paint job.

Raytheon:
- Anything for any model

73 and thanks,
Dean, K5DH
Visit my Raytheon CB radio web site:
http://www.qsl.net/k5dh/raytheon.html

there are always less CBers in the top of the skip cycle - way too much noise during the day makes it nearly impossible to talk to someone more than 1 mile away ground wave. CB picks up at the low end of the skip cycle every time.

"OldManTube" <oldmantube@aol.com> wrote in message news:20001127002726.02076.00003576@ng-ch1.aol.com...
Everyone makes such a big deal about all of this , but the bottom line is , there is hardly anyone on the radio anymore , Ham or CB , and now this law is
going to make the few people out there still interested in a dieing hobby to maybe sway away , because of the hassle they may get from law enforcement , so
many may just say this is the last straw , and many Lic hams in my area are not
renewing Lic because of this Police State we are getting into anymore , plus there are a less amounts CBers even in my area which means less people even trying to get a Ham ticket in the future , which means a DEAD hobby, thanks
....

Scott, I have a bunch of 3 inch speakers here... I am not sure what you mean in your description... Please email me directly so we can sort this out.

Dean, I have sent you an email with some good news. I will hear from you soon I am sure!

To clarify my earlier post, I only have a limited supply of base unit parts. Most of the radios I deal with are of the mobile type.

I have a Colt Midnight Special and a Gemtronics GTX-5000 (which are the same radio) that need a home. They need a couple of if transformers to restore them to working condition. I don't have time to deal with them so if you are in the market for a couple of fixer-uppers please give me a ring. No reasonable offer refused!

Huh! I think you need a receiver that works. I have been hamming since 1956
and I can tell you first hand the bands are as alive as they have ever been.
You obviously have internet access, check the FCC for numbers of hams,
compare those numbers to years past.

I respect your opinion, but I think the facts say otherwise.

In spite of the supercilious nature of your response, I will be glad to answer your question and how I was asked. First of all at age 62 I am past trying to impress others with imagined feats of anything.

I am an ARRL technical advisor and am a member of our clubs interference committee. The purpose of the committee is to help Hams with interference problems that may be caused by the Hams station or outside interference to the Ham. In addition I live in a very small town. (Chalybeate Springs, Georgia) and am known from my activities in Rotary and other civic organizations.

"Mr. I am so important", hardly! Anyone on this board can tell you my activities on here hardly take that form and I hold no animosity toward anyone on here regardless of license or band operated. Might I ask the same courtesy from you?

I suspect you have hit the nail on the head! (Andy Rooney mode on) Did ja' ever notice that these type of remarks are couched in generalities and never have any of the things that give substance, like facts? (AR off)

If you truly have the case you allude to, simply get the call sign of the offending Ham. Log on to HTTP://qrz.com where you will find the name and the address of the miscreant, Next log on to the ARRL site and request that the information be passed to the local Official Observer (OO) for further investigation. Will it get rid of all the problems? No, but it will get rid of those that you claim are running 2KW and cussing. You now have the solution to the problem, ergo I suspect we will see no further "ain't it awful" posts.

Well Scott,

At least he has a call and that shows that he did study some and at least make himself legal in the ham world. I don't see you posting anything useful here. What have you done for us lately..? Did you study and get a ham ticket that you'd share your callsign here with us..?

You also didn't post any of his original text to qualify your knife in the back followup. After viewing your followup, I'd probably help him before I'd help you ... Unless you can provide some of his original text quotes to justify your post, your only blowing bad air.

skipp@pilot.ucdavis.edu
http://sonic.udavis.edu

ps Edgar, you'd be better off finding a dead radio on this news group or Ebay if you need a meter. Good luck as DAK radios seem to hold their value well.

cheers
skipp

he , he, he, can't you just see it??? the hpd swat team, surrounding a keydown situation in fort bend county , telling everybody to come out with their hands up and the microphone fingers visible, come on , come on. i guess it could be easier to bust them than drug dealers in the fifth ward.....i think.....you have to consider though. if they start taking these democrat's big radios from them, what are they going to do with their lives????? go learn to read???? i think not, to little too late, been on the goverment tit tooooooooooooo long, no doubt about it.....cd is out.....

Hello

I just picked up a used Turner Super Sidekick microphone, I wired it up and it seems to work good.

Does anyone know what the adjustment on the bottom of the mic is for and how to set it?

Could anyone email me a copy of the specification sheets on this mic or know were I could download a copy.

Your help would be appreciated.
Thanks
Andy

Day 2 Update

Note: These prices are fairly firm, but not absolute.
I will give consideration to lower offers after giving post a few days exposure.

All prices plus shipping from postal code 31523

Weeding out part of my collection and excess radios.

More to follow when I can clear out enough room to unpack and list.

Will consider Mobile, Handheld or Base HF/VHF/UHF Ham gear in good condition in trade.

Here for 5 days, then off to eBay..

Replies/Inquiries to dalite01@sprynet.com

He posted an online test and asked for folks to take it and post their scores. What is wrong with that? I'm curious too, hell, I KNOW there are cbers in here that can pass the highest class of exams, so what? It was neat to do, since I never even looked at getting licensed.

Hams don't be fooled by your false sense of security, regarding the new law designed to rid the nuisance cber. If I'm a cop, who has been well informed, and well versed on the subject. I would most likely handle this nuisance as I do all others. I respond, not investigate. Therefor no special equipment is needed. Because all I do is respond, by knocking on your door, and stating a complant has been made. Most likely it could end at this point with no inspection, and or follow up. But, if more complaints are made, maybe more than one person complains, within a sort period of time. I as a cop, will be back, and I will put you out of business . You can show me your license, let me inspec your station. I don't care. A complant has been made, your in the line of sight, YOUR IT! It will be up to you to prove other wise in court.
Now you boys may spin all you want. But the bottom line is, many of you will be on the receiveing end of this. As in most cases in the past ,and as time will tell in the future, license op's will be in the majority in being busted, despite the fact that it is aimed at cber's.

Greetings!

Well, now that you've asked,

Do you have any of the following chassis' for parts...

Uniden;
pretty much any radio - SSB ones preferred.

Cobra;
19+ older styles, these radios are still being used...
anything AM or SSB in this line...

Midland;
Curious to see what you have here...

Those are the three main lines I'm looking for...

Email me back with a list of the radios you have in the lines above
and I'll make an offer.

If anything, I'd be willing to give up some older radios for parts,
but they just ain't worth much and were part of a package deal I
received from a CB'er that was cleaning out their older stuff.

On Mon, 27 Nov 2000 14:59:19 GMT, while the modem was pondering it's
navel, "The Antenna Man" <buzzards@optonline.net> dissertated the
following:

:+> I have a plethora of old CB radios here that are used for parts...
:+> As a courtesy to this news group for letting me post my radios for sale here, I am opening my parts bins up to you for this holiday season! If you need an unusual part, I may have it. I do not have parts for the high end radios of today but I do have a lot of parts for radios of yesteryear. If you are trying to restore a radio and run into trouble finding parts, just send me an email and I will see what I can find for you. I have Meters, Knobs, Transistors, Transformers, IC's and the like. I will not charge for this service (other than the shipping) but any donations for my trouble will be greatly appreciated. Once again I would like to extend my thanks for your continued support.

Oh, Ben. Your logic is priceless. You so DESPERATELY want licensed legal hams to suffer in order for the bad boys to continue their high power games on 11 meters.

Please note that your little scenario does not take into account that a majority of hams willingly take action on their own to alleviate a neighbors RFI problem if and when it presents itself.

The hams who are not willing to be neighborly in this fashion or who play games on 11 meters will get no protection from the ARRL or the FCC's Hollingsworth. They will be lumped among the bad boys that this bill is aimed at and will likely be on the receiving end of a federal NAL as well.

Punisha,

I think you know how I stand on this stuff. And you will also see that I don't participate in the flame threads. The only good thing out of all this is reading the posts pro and con. I weigh in on the con side. I still think all these folks who think this is a good law are sadly mistaken.

I took the time to respectfully answer your question, may I ask you to do the same when posting to me. The first people the locals are after are the Truckers that come through cussing everyone and telling the locals they need a linear if they want to talk.

Don't shoot the messenger, I reported what was happening. You taking exception to it, directed towards me, will change nothing.

>screaming about this like morons while the hams are the least bit
>worried. Why are you people so afraid?

"Screaming like morons"? Hmmmm. While the CBers are trying to have a discourse on the consequences of the just passed bill, most (with a few excptions) of the hammies are gloating like a bunch of 11 year olds who just snitched on the kid next door for trying a ciggerette behind the barn. Grow up TR and maybe someday you might get taken seriously.

Tom,

You didn't read the post right. He had no "right" to be at a field day?
He WAS NOT transmitting. He was there with the filed day ops, and one
of them gave him the high nose when he found out he was a CBer. That
was WRONG! That ONE action may have turned him against ALL hams and/or
ever getting a license. Why couldn't he accompany hams on a VHF con-
test, Huh? Again, he was THERE, not transmitting illegally!!

And I have said it before:

The law clearly states that LICENSED services are EXEMPT from local
enforcement. And if I am "busted" in spite of showing my license(s),
and I DO operate legally, it will be thrown out when it hits court.
If I am unduly hassled over it, then I'll sue hell out of the local
gov't, the department, AND the donut dick that "busted" me.

I agree that it IS a very bad precedent.

Nick. Nick. Nick. What "discourse"? Get real. Read the posts. The majority of
CBers are whining about how unfair the bill is, trying to figure out ways to
beat it (i.e. defy the law, forge ham licenses, hide the illegal linear, etc)
or trying to scare hams into thinking jackbooted thugs are gonna kick in their
doors.

Thanks, Jerry. At least you can follow a story.

Not all hams are bad, but it sure left a sh!tty taste in my mouth.

Yes, both services have bad apples, but I know several hams I would
go out of my way to help, and several I would let drown in quicksand.

Again, my apologies to the good hams, if I have offended the few
good ones on this group. (You know who you are.)

Hey Tom, isn't field day supposed to be a good place to be elmered?

(I'm in a much better mood today knowing that we won't be Gored
for four years!! It's scary almost having a commie in office.)

(Shut up Dave/Debby you cross dressing commie slut! Don't even
bother to respond. Go back to bed with your bible between your legs.)

It is incredibly stupid. CB rules from day one were stupid. Lack of enforcement for 30 years is/was stupid. Export radios are stupid. Cheesy linears (if that they be) are stupid. Keydowns are stupid. The bowl is stupid. Channel Mastering is stupid. Hell, AM is stupid. Not a disagreement in the world.

So out of this mass of stupidity, local mayors, police chiefs, and sheriffim prevailed on a Congressman to find a way around Federal preemption and give them some weapons to fight back. Lo and behold, a number of other Congressmen have had that bitch laid upon them and Senators as well and it got thru Congress -- no Amateur lobbying except for exemption and no FCC comment pro or con. Last time I looked, that was pretty much how the system was supposed to work.

Is this approach the best possible result? Good Lord, no! Is it the best result possible? Probably. yes. Will it work? Better than you think and worse than you fear.

I don't have a problem with that, Freddy. I can get quite surly at times when being inquisitive and ignored. I just want to know if the local boys or county or what requested your help. I been to areas near you in the peach state. Hog and deer hunting in those tick, gator, mosquito and snake infested swamps, fishing those river marshes, hell, it felt like home! The cops in some of those towns are very similar to the ones in our own backwater swamp towns. They're good 'ol boys and cb was and still is way of life for these native suthnahs (sic). Some departments only have 1 full time officer. Now if you got a J.O. into office because of connections, then you can run amok, 'cause as someone else posted, if it's a small town, they is the law! I 'jes wanna know who extended the offer.

Actually, none of them are all that complex. You probably will not pass the General and Extra quite so easily cold - there is a lot of material that needs to be regurgitated but nothing all that remarkable.

Suggest Joe Speroni's site http://www.ah0a.org and the Ham Academy and Morse Academy thereon. It is well thought-of and is entirely without politics.

If you do get into the Morse, you will soon discover the origin of 73. In the landline and Titanic days, 'best regards' was a standard closing and the ops soon tired of it. Like a lot of other things it was abbreviated. So it became (listen for the sound) dah-da-di-di-dit di-di-di-dah-dah.
Kind of an early-day SSDD.

When one treats an officer with respect and tact, it will be a simple task to show him a copy of the law and the specific exemption you are claiming. On the other hand starting the conversation as outlined, will probably get you "attitude" returned in spades. Thus it has always been, and thus it will always be!

When someone new moves in to the neighborhood, I always ask the same question in response to "what are the people like here? ", what were they like in your old neighborhood? Regardless of the response, my answer is always the same. -You will find them exactly the same way here... Those that look for the good in people ALWAYS find it, the converse is also true.

False sense of security, your pretty pink patootie. There are enough horror stories about call-sign license plates alone to fill volumes. A number of states (all states allow the plates) used the first letter to indicate expiration month. Most made them October plates because W usually indicated October; then came the Ks in the 50s and A and N in the 70s but they still expired in October. Every now and again some yahoos would haul in a non-W, contemplate what appeared to be legal paperwork, in my part of the world accuse him of making the plate in his basement with that 'funny Q', and ultimately end up apologizing all over the floor. Newer compooter systems have kept this down to a lady-like belch but the slashed zero damn near got me whacked by a little old lady with an umbrella when Wisconsin (9 land) wouldn't give it to her for some Scandinavian expression and she demanded to know what made me a privleged character (It Ain't Fair is the unofficial Wisconsin motto).

Sure there are going to be screwups. They will be handled in the usual course of events just as they always have been. The difference is that I can sleep the sleep of the righteous and you can't. But then again, neither of us is Chevy Chase.

They will no longer know that there is a problem because the neighbors will
no longer tell the radio operator he is causing a problem they will just
call the police.

What security?

> regarding the new law
> designed to rid the nuisance cber. If I'm a cop, who has been well informed,
> and well versed on the subject.

That would mean you have had the FCC technical guidance and
understanding
of the Law says you SHOULD have, MEANING you understand the
determination
of the violations of the regulations in Part 1 in accordance with
Paragraph 3
of the Law.

> I would most likely handle this nuisance as I
> do all others. I respond, not investigate.

Once a LEO is on the scene, HE IS INVESTIGATING to determine the if
probable cause exists.

> Therefor no special equipment is
> needed. Because all I do is respond, by knocking on your door, and stating a
> complant has been made. Most likely it could end at this point with no
> inspection, and or follow up.

It could end at this point beause the Officer will need PROBABLE CAUSE
to
ascertain if any violations have taken place, therefore he or she will
call
in the experts (ie anybody with radio experience or certified to handle
this
type of complaint or in small communities, the officer will have to
possess
this knowledge.)

> But, if more complaints are made, maybe more than
> one person complains, within a sort period of time.

At this time, the experts will be called to investigate further.

> I as a cop, will be back,
> and I will put you out of business.

SEE EXPERTS above.

> You can show me your license, let me
> inspec your station. I don't care.

In cases where the subject matter is complex (Homicide,
Securities Fraud, Explosives, and Electronic Crime, just
a few of the many example where experts are used) I would
wager that a "Radio Cop" would probably be called in to
oversee the investigation.

> A complant has been made, your in the line
> of sight, YOUR IT!

Understand Probable Cause.

> It will be up to you to prove other wise in court.

Since the Law specifically exempts any LICENSED STATION
operating under Section 301, this is where the wheat and the chaff
is separated:

1. Using the FCC's definition of Station which is all of
the equipment located at a specifice location, this could throw
a monkey wrench into enforcement if an Amateur is in violation
of Part 95.

2. However, since the offending party appears to have a
"STINKIN LICENSE", the FCC would proably get a copy of
Officer Friendly's report about your operation on 27.555,
the Leen-year or other unauthorized equipment. RESULT-
A NAL FOR LOTS OF GREEN STAMPS since a license would make
the offense come under FCC jurisdiction.

> Now you boys may spin all you want.

Really, nobody knows how this thing make shake out. I guess
some jurisdictions will be gung-ho, some luke warm and some
might not bother.

> But the bottom line is, many of you will
> be on the receiveing end of this. As in most cases in the past ,and as time
> will tell in the future, license op's will be in the majority in being busted,
> despite the fact that it is aimed at cber's.
>
Hams may be inconvienced at first but rest assured, the Judge, District
attorney and the Cop on the Beat will have the exemption explained to
them
the first time they make a bad or bogus arrest. The last thing a DA
wants
is to look bad in front of the Judge and once a cop makes a "bad bust",
his credibility can suffer. I expect that once a LEO sees a license, he
will just back off, write up his report along with any observations and
forward it via "proper channels" to the FCC and the Local Radio
"expert".

They often are the same radios with only the control head modded. The key
is that type-accepted units would not have any frequency display beyond a
1,2,3 sort of indicator.

Dick,

It seems to me that *if* they were going to do something in response to complaints(if they arguably existed in the way I have "heard"), Congress should've said, "OK, we have an agency that is charged thru the Comm. Act of 1934 with enforcing that law, and it is unable to do so because of inadequate funding." Then they ought to've restored enough funding to FCC to do the job they are charged with in the first place. Reason? Obviously, because here is where the expertise in comm. law is, it's where the technicians who understand(?) such law are, or can be hired. It is a case of pass-the-buckism just so the congressmen can tell their complaining(?) constituents, "Look, we DID something". Still, for FCC to provide the "assistance" to boo-koos of LEOS--assuming they are willing to tackle such a job--, and to field the questions that are bound to be asked both by LEOs and those affected by this, would cost as much, if not more than it would for FCC to do the job itself, IMHO. I think those of us on both sides of this issue can agree that there WILL be some mistakes made that will prove costly to both the radio-using public and the LEOS. Can you spell L-A-W-S-U-I-T? I can even invision one or two LEOS losing their jobs for hassling the wrong person with the I-am-the-law round these parts, yuh h'yar attitude. As good as it sound to the other hams that are snickering over this, I say it is a BAD thing.

Scott,

Thank you! I really hate that that happened. I would NEVER have done that. My club has its field day activities at a local park where there are lots of people around. That is on purpose so that folks can find out about ham radio, and we get a lot of visitors. I mean, that IS the whole idea--to gain exposure as well as participate in the field day exercises. Visitors are welcomed, and discreetly invited to partake of the food (that's one thing about us hams--we find any excuse to eat!). LOL! Naturally, we couldn't feed everybody in the park, but lots of times when a person is genuinely interested in what we do, he'll get plenty of "ham"--pardon the pun--chicken, beans, cake, or whatever else we can palm off on him. At least we can insist on a cup of coffee.

Even as a ham, I have run into the nose in the air types. Hee Hee! I told one Extra one day as I left to be careful and not let it rain in there. What? I then said, if it starts raining, be sure to lower that big nose so you won't drown! LOL!

Scott, I can't make excuses for the clique-types, but if you REALLY enjoy radio, if you would like to expand you OWN enjoyment of the radio hobby, just remember this: Don't let anybody stop you if you decide to pursue a ticket. Because you can go to so many bands, find so many educational opportunites, enjoy so many frequencies you mustn't allow a few "idjits" to stop you. I even know a few holier-than-thous at church, but I don't let that stop me from attending church--I just sit on the other side. LOL! When I hear some jerk on the ham bands, I just shake my head at his OWN idiocy and turn the dial and find somewhere else to operate. There's plenty of room for everybody--even the jerks, unfortunately, whom we wish would go away, and Mr. Hollingsworth is slowly but surely spoiling their fun.

I am really sorry that happened to you.

No, it isn't 'over-kill', and if it's any good, should work
just fine. Any used coax is a bit "iffy", your usually getting
someone else's problems. A continuity check really doesn't
tell you much. It's not the best way of checking used coax,
but stripping the outer insulation from a few feet of the coax,
and checking for any change in the color of the braid will tell
if it's ever been 'burned'. If the braid has changed color,
throw it away.

Junk the RS Antenna.
Positive lead to the most direct route to battery, same with Negative.
Hidden battery or no hidden battery, you should be able to get to it. Fuse
the Positive lead. Use 10 gauge, stranded wire. Solder as many connections
as possible. Make your cable runs as short as possible. Ground the radio.
Troubleshoot your electrical system for interference, fuel pump, alternator,
etc...
Check and see if the radio has been modified as to modulation. 2950's don't
like it on SSB.
I would start with the antenna though. Is it new? Is the coax crimped
anywhere?
Good luck.

Listen Dill Wadd, the freaks of nature A.K.A as HAM operators or located in Lake Elsinor So. CA. Thats all the facts you need, now if anyone on this news group is located any where in the near vicinity of that area would know with actual FACTS that the people that are running power irresponsibly and abusing there privilege are the Amateur operators in that area.

Now please, please, please prove me wrong or would it be to much of a shock to you that your fellow Hamsters are a bunch of over grown adolescents. The folks I know who talk on the radio, yes CB'ers, are at least up front and show you who they really are instead of pretending to be holier the thou elitist. So take along look at your self in the mirror and who you affiliate yourself with and come to the reality that your nothing but another radio operator that can memorize a few questions. Tell me, when was the last time you actually put to use some of that information that you memorized to get your license? That's what I thought, just another educated derelict with a piece of paper who doesn't have enough common sense then to come on a CB reflector talkin smack. You have only one thing going for your self, and that is you are destined to received the Darwin Award some day the direction your going.

6968. BAD Guy Alert - Jerry Pippens

Newsgroup: rec.radio.cb
Date: 2000-11-27 00:39:32 UTC
From: N6TGK <n6tgk@home.com>
Message-ID: <83iU5.14634$I5.205003@news1.rdc1.sdca.home.com>
Source record: 60828

Don't buy/deal with Jerry Pippens (aka cbnut24 or cbfixxer).

He was auctioning a Uniden HR-2510 on Yahoo! auctions.
In his auction he stated he would also trade the 2510 for a
Uniden BC-895 Trunk Tracker. I contacted him and we agreed
to make the trade. I advised that we should both ship the radios
on the same day and send each other the tracking numbers.
He told me he shipped the HR2510 on Monday, November 13 and
gave me a "confirmation number" that he said would show up in the
system in 12 hours. I wasn't able to ship on the same day but
I did ship the scanner the next day on November 14th.

Jerry received the scanner on Tuesday, November 21st. I still have
not seen the HR-2510 nor is the confirmation number valid. Every time
I've asked Jerry where the 2510 is he comes up with some lame
excuse. He even told me on November 21st that the radio wasn't
shipped until that day because of a problem with his return address
and that he would send me the new confirmation that night. I have
yet to receive the new confirmation number and when I asked him
about the 2510 again he told me to quit being a "whine ass."

If you value your money or equipment... don't deal with Jerry Pippens
unless you're shipping to a real address and you have a VALID tracking
number from him FIRST!!

Best regards.

: Not true. I am a licensed amateur operator who believes the amateur community
: has MUCH to fear with this bill.

: Many hams thought they had "nothing to worry about" when states passed
: restrictive mobile scanner laws also.

Yep. As has been pointed out, Hams WILL be targeted, especially if the police can manage to apply the RICO civil forfeiture practices, as they have with illegal drugs.

Just imagine, a neighbor complains. The police get a warrent to search your house and find radio gear. They confiscate everything is sight, including your bank account, computer etc. You have to sue in civil court to get it back - assuming you have relatives who can provide the money to fund the lawyer. And what happens if you win? Why, "unfortunately", the local police transferred the property to the Feds - so you have to start all over again. Do you need to be charged with a crime? Nope.

If you don't think it can happen, then you are wrong. It already happens every day here in the US.

: The sky is falling, the sky is falling!!!

Well, JR. I just hope you are not one of the Hams who is treated that way
by an overzealous constable. It can, and will happen. That is documented
by what happens already - with illegal drugs being the excuse.

The sky fell decades ago. It is just that most people are so hard headed
that they didn't feel to when it happened.

Hey gang....

Guess what? I have heard a bunch of talk about this thing...but I have not once herad these words..."I operate my CB completely legally..."

Why?

I think it is because most of those posting here do not do so.

I have also heard a lot of trash directed at "snooty" hams.

Why?

I think it is because some individuals lack the discipline to obtain an amateur license, and are resentful. NOTICE I said DISCIPLINE...not intelligence. My 36 yr old sister gets that way when one of her siblings buys a new coat, car, etc.

The bottom line is those of you who are complaining are likely the ones the enforcement will be aimed at. That riles you up, but it won't change the reality. You operate illegally and you know the risks and penalties up front. Why act like
this is some big infringement on your rights? Your right to operate illegally has never existed.

No I am sorry you have made no point at all Ill make my point again If no one can get ahold of davemade why are there so many out on the airwaves. Reread the thread and you will see who replied to what, you blamed operator error for most all broken xforce or davemade then you post under another " suedo" name saying you are just a customer then if this is so why do your shorts get all bunched up when someone mentions xforce why i tell you why you work for them its just that simple. I am sure old Riley knows all about you guys anyhow from what i have read on here . Perhaps You can tell mr hollingsworth how service oriented that xforce is when he makes a visit.

6981. Need Advice...Best Base CB??

Newsgroup: rec.radio.cb
Date: 2000-11-27 04:25:16 UTC
From: Wes Wingo <wildwes34@earthlink.net>
Message-ID: <MmlU5.7351$II2.702688@newsread2.prod.itd.earthlink.net>
Source record: 60841

Hi,

I am in the market for a base station and do a lot of Dx'ing on ssb. What is the best radio that will transmit on 26-28 mhz? I already have an Antron 99 65 feet up.

Thanks,
Wes

Please reply to wildwes34@earthlink.net

Q: What's so good about an Ethiopian blowjob?
A: You know she'll swallow.

Q: Why don't they teach driver's education and sex
education on the same day in Iraq?
A: They don't want to wear out the camel.

Q: What do you get if you cross a Hell's Angel
with a Jehovah's Witness?
A: Some one who knocks on your door on a Sunday
morning and tells YOU to fuck off!

Q: What's the difference between getting a divorce
and getting circumcised?
A: When you get a divorce, you get rid of the
whole prick!

Q: What's the difference between a G-Spot and a
golfball?
A: A guy will actually search for a golfball.

Q: Why does a bride smile when she walks up the
aisle?
A: She knows she's given her last blow job.

Q: What did Cinderella say when she got to the ball?
A: *cough* .. *gag* .. *choke* ..

Q: What did one gay sperm say to another?
A: How do we find an egg in all of this shit?

Q: What did the elephant say to the naked man?
A: It's cute but can you pick up peanuts with it?

Q. How many mice does it take to screw in a lightbulb?
A. Two. The hard part is getting them in the lightbulb.

Q. What's the definition of 'trust'?
A. Two cannibals giving each other a blow job.

Q. How do you find a blonde in long grass?
A. Pleasing!

Q. What has seventy-five balls and screws old ladies?
A. Bingo!

>Q. How do the little boys at Michael Jackson's ranch know when it
is bedtime?

A. When the big hand touches the little hand.

Q: When is a pixie not a pixie?
A: When he's got his head up a fairy's skirt, then he's a goblin'.

>Q: What's a Japanese girl's favorite holiday?
A: Erection day.

Q: Which of the following doesn't belong: wife, meat, eggs, blowjob?
A: The blow job. You can beat your wife, your eggs, or your meat;
but you just can't beat a blow job.

Q: How can you tell if a valentine card is from a leper?
A: The tongue's still in the envelope.

Q: What are three words you dread the most while making love?
A: "Honey, I'm home."

Q: A woman of 35 thinks of having children. What
does a man of 35 think of?
A: Dating children.

Q: What's the difference between white fairy tales
and black fairy tales?
A: White fairy tales start, "Once upon a time...."
Black fairy tales start, "Yo, you motherfuckers ain't
gonna believe this shit....."

Q: What's the difference between a Catholic wife
and a Jewish wife?
A: A Catholic wife has real orgasms and fake jewelry.

Everyone makes such a big deal about all of this , but the bottom line is , there is hardly anyone on the radio anymore , Ham or CB , and now this law is going to make the few people out there still interested in a dieing hobby to maybe sway away , because of the hassle they may get from law enforcement , so many may just say this is the last straw , and many Lic hams in my area are not renewing Lic because of this Police State we are getting into anymore , plus there are a less amounts CBers even in my area which means less people even trying to get a Ham ticket in the future , which means a DEAD hobby, thanks ....

I think you will find that many amateurs will be only too happy to assist with technical advice and the loan of equipment. Once they see the fines rolling in I predict the airwaves will be come legal in short order. Our local Cops are limited by state law to revenues from tickets not exceeding 15% of the annual budget. These same small towns use to derive 85% from tickets. Now a new revenue source pops up, I can promise you it will not be passed up.
Nearly every cop car has a CB radio, they drive around 24 hours a day, bound to catch a few right off the bat. Like any new law it will probably be strictly enforced once the money rolls in, no namby pamby warnings!

Police are going to be as enthusiastic about enforcing this as they are going
to a barking dog complaint. They'll knock on a door, "Are you interfereing with
your neighbor?" "No." "Thank you" and clear. Do you think they are really going
to waste their time? And pulling someone over for having an antenna on the car?
That would never hold up in court as probable cause.

For stats mainly.. and for an easy bust. Just think how many hits they'd get running those guys through NCIC!

Now we just have to get them to realize that the vans and suburbans with the two huge coily antennas each in the park are having a keydown.

Whoa! Reality check, my friend! :-)
Take a listen to a shortwave receiver, or a ham rig or CB, and you'll find there are a hell of a lot of hobbyists still gunning for the good DX, still interested in hearing the many stations to be heard, to talk to anyone to whom propagation has granted favour.
I can understand to an extent, the passion of your point, but I don't think it holds much water if it's based on the idea that "hardly anyone" is on the radio anymore.
The oppposite is true, there are more people using the various forms of radio communications than ever before... a good look at the political and economic value of frequency/spectrum space should prove that point, on no uncertain terms.
Linus

Your choice, of course. A lot of people agree with you including a lot of ditty-boppers (ahem) but control of this particular issue lies with the ITU (being a hobby defined by treaty has its problems) and is not going to be looked at before 2003 if then. There are some pretty good uses for CW if one is a DXer or Contester or merely a contrary SOB.

It would not be the first useless thing you did to obtain a license nor would it be the last. Your choice, you want it or you don't.

In most civilized countries, only the FCC officials together with law enforcement can confiscate illegal equipment. We're simply talking about the illegal guys. That simple. And a police officer will certainly be briefed before his mission, by his commanding officer. His judgement, on the other hand, will most certainly be based on fact, regulations and such.
So you can all take it easy, you don't have to call your hotshot lawyer on his cellular on the golf course - unless he has forgotten to take his phone along and left it in his Mercedes or BMW :-)) Gary

Bullshit and you know it. Hams are FEDERALLY LICENSED. The law is intended for CBers, not hams. An FCC license shown to the cop should be all that is really needed. If not no problem, show the judge the license and it's "see you later Officer, have a nice day!" You wouldn't even need a lawyer, it's a no brainer. Local law has no say in a federally licensed individual. One check on a callsign database clears it all up right quick. It's the CBers that run illegally that are crapping their pants. GOOD.

7003. =>[Anyone have a BAD DEAL w/ Galaxyelc@aol.com?]<====

Source record: 60933

Hi:

I am looking for anyone that may have had any bad dealings with
this fellow. There is always two sides of a story, I have one that
is trully sad. Fellow advertised a HP500C as complete, like new, fully
operational, was paid for in advance, and well....what was received
was total, absolute, and complete junk, and was SENT INCOMPLETE
(Also advertised the same unit for months untill a fish took the bait)

He has implied I damaged the day after it was received.
(It could not even be checked out properly without the
Driver CD, which was missing) and came up with excuse,
after excuse about having to spend 35.00 for a (2.00)
Printer Cable (Which I offered to return) I asked
for any RECEIPTS, could not get those either, and complained
about 30.00 in UPS Ground Shipping (that too is being
checked on)

TRACKING NUMBER STATUS : 1Z 470 X70 03 1486 919 0
Delivered on: Nov 1, 2000 1:15 P.M.
Delivered to: SAN DIEGO, CA, US
Service Type: GROUND
Tracking results provided by UPS: Nov 27, 2000 3:08 P.M. Eastern Time (USA)

Have contated him time and again with little or no results. Planning
to send to HP for a Detailed Report (and repairs) and I get a lame
excuse that " I damaged it", or "He does not know what happened to it"
or that" it was a month ago." Contacted him (and HP) the next
day after it arrived, and just received the HP CD Drivers a few days ago
==========
Made a fair and resonable attempt at downloading the Drivers
from HP's web site, and it did not work, so I decided to ORDER
a NEW replacement CD from HP...That did not work either !!

Tried a New Color printer, worked perfectly !! Elimainated the
Computer / Operator possibility
==========
A picture (and DATE) of the invoice for the Missing Drivers CD that
had to be ordered from HP can be seen @
http://www2.4dcomm.com/metrotech/hp_inv.jpg
==========
Unit was recieved on November 1, 2000 UPS Tracking Number

Maybe many of you were not around in the 70's / 80's , when there were so many people on the waves you could not get a word in sometimes , anymore the bands are empty . You may hear 5 or 6 on one channel , but thats not much when you have millions of people in the USA and 9 out of 10 people are on computers . Yes , there are still truckers out there which has kept the CB noisy at times even without amps used (most new Trucks will not run properly with a amp hooked up) , but the amout of base radios has been reduced by far since the 70's/80's , the amount of antennas on homes have reduced by far too

Now that is a very good question. I am curious as to what will happen. Since as I said in my town alone there are at least at the top of my head 100 keydown guys that I know personally and guess what??? THEY ARE ALL COPS. 5 are detectives!
All I see happeneing from this if they do actually start taking equipment from people.... Is cops and other cops and friends of cops will be getting more equipment at a cheap price or in my case probably free!!!!
It really stinks!!!
If the hams think anything will really stop, well I got a ham sandwich to sell em!

Is the noise a whine or a pulse type noise? Two thoughts come to mind, if it is a whining noise it is coming from the alternator, if it is a pulse type noise (Which is what I suspect) it is most likely the fuel controller. Get back with me on the type of noise and maybe we can help you solve it.

At 5wpm, the time invested to pass the code exam is minimal in comparison to the privileges granted.... (All the way to Extra, and only ONE code test!)

Code is STILL useful in may areas of Amateur radio... Ever hear a repeater ID in Code?.. How'll you know what repeater it is without knowing code? I guess you could wait till it IDs in plain English (if it does). As the previous poster said, you'll have to wait a while for CW to be dropped as a requirement... possibly more than a few years. Why wait at all when all that's required is a measly 5 wpm. Two to three weeks of 20 minutes 2x daily and you're done!... Do it during your breaks at work.

BTW.... XT computers still have plenty of uses... although I have a more recent laptop and a better Desktop PC, my old XT still does 24 hour duty as an HF/ VHF Packet/RTTY station and could be used to copy & send CW (not to mention logging, etc). Now, I'm not sayin' run out and buy an XT, but since folks will GIVE 'em away, and there's still lots of software out there for 'em, why not put one to work?

Scott,

Believe it or not, I was the same way. I only learned 5WPM because I had to when I got my license and put it out of my mind because I thot Tech would be all I'd ever do. But.....down the road, I wanted more, so. I hemmed and hawed for awhile and then, well, ok, it's the only way I'll ever upgrade, so I began to study for the 13WPM. Just to get it out of the way. I went on the air and began to QSO on CW and study the Gordon West tapes. Somewhere along the way, I began to get better at it, and uh, oh, I got hooked on it and found myself sitting up far past bedtime for just ONE more QSO. Eventually, I was able to copy it without thinking about it or even writing it down. For me, it was very satisfying to have "mastered" this "new" language--and a language it is. I know it seems like a lot of trouble--and I am not now defending CW in the light of current needs or other technology--but it IS fun and rewarding to be able to copy it. It was, in the beginning, a chore that I didn't want to do. But I did it, and now am glad I did. A good CW op is a joy to listen to because it has an almost musical quality to it. A good fist is an "art" unto itself.

I know that CW will in the near future be relegated to the annals of history, but, I hope it won't be "banned" or looked down upon the way Sidebanders look at AM. Now that I have that skill, I hope to be able to use it for many years to come as an enjoyable, relaxing operating mode. Just my 2 cents.

Source record: 60950

I think that we are not all seeing this for what it is. This new bill
is a way for the Government to gain revenue in fines. This is way (and
desguised quite well i might add) for the Government to all but shut
down 11 meters for good, even the average Joe running his 4 watt
cobra19 who generates TVI on Mertle's 25 year old Curtis Mathis tv will
have his radio confiscated, And over time people will get tired of
getting harrased ,will take their antennas off of their vehicles(in
fear of being harrassed). After a while 11 mteres will die out , and
then the FCC can auction these frequencies off because they are not
used anymore. In the mean time there will be a rush on people getting
ham tickets And the the old Fart Hambos will bitch and complain about
how congested 2 meters have become. After a while the Old Fart Hammies
will slowly die off , and then These freqs will become what 11meters
are today A playground for the unconcerned. See the Hambos dont realize
that this is bad for them , they see it as a victory they are too busy
falling over themselves to look at the big picture they are not
stopping anything , they just caused a bigger problem for themselves.
It will be a matter of time before rogerbeeps , and rogerfarts are
heard among the 2meter,70cm bands as they are in 10meter. As more and
more of the CB'ers that are run off of 11meters congregate to the ham
frequencies with their newly aquired ham tickets in hand!!It wont be
long until you hear ONE,ONE,ONE,ONE or WORLDWIDE,WORLDWIDE,WORLDWIDE.
So For all you Hambo's Now its time to Reap what you have Sewn.
Sometimes things ar better by just leaving them alone!!!! And with that
off of my Chest I'm Back Quiet!!!

I am not sure what you are after. I explained that I live in Chalybeate Springs Ga. I further stated that I was contacted by the local police. You apparently discounted what I said, in spite of your supercilious attitude, I said here is a phone number for you to call. You obviously are not going to take my word for anything, so either call or not.

I am at a total loss as to what you do not understand given my responses. You on the other hand feel because of some imagined slight on my part, you have the right to call me "Freddy" and otherwise act as if you are some wronged party. I trust you will understand that to avoid further unpleasantness I am putting you in the kill file.

Again I strive to treat each member on here with respect and will accept no less in response.

Yeah,

It has been on there on and off since the first time Bush was declared the winner. Rumor has it that the CIA has tapped Al Gore's telephone and is playing it back in real time from Airforce Two for maximum exposure.

If you want to see the face behind that whining, look here:

http://www.paintballcity.com/uploads/DemocraticSeal.jpg

With the 50 electoral college votes that Bush gets for the 2 times Florida was certified in his behalf, it will be the landslide of election history; not likely to be topped again; (unless he gets another 25 added to it by another certification).

Algore's Dogma got run over by Dubya's Karma.....

Thanks for the advise, I just installed directly to the battery and made a QSO to Hawaii, the report was 5-7 and no problem with the modulation.

> section and front end of the radio.
>

Said often, not always. There are three good reasons for differences:

1. You are trying to reach a price point somewhat lower than the
type-accepted versions. If you sell enough, it is worth doing; if you don't
the complication of additional parts in your inventory isn't worth the
aggravation.

2. The 2 meter version need only cover 6 MHz at the most where VHF hi runs
151-174. The number of models to cover a freq range is also a function of
sales: contrast GE vs Motorola of years past. Similarly the front end. UHF
is 10 MHz vs 450-512. Seems like a good place for a serviceable and cheaper
synthesizer.

3. You don't compete with yourself as Collins found out many years ago. You
do not want a customer telling you that the same rig on the ham market is X
while he is paying 2X. It may be as little as the case or it may be
something more substantial but you find some way of distinguishing the two.

As a practical matter, were I on a Police Board (and I have been) I am not
going to send a cop out with anything that might later disturb my sleep or
get me and/or the muni discredited, sued, or otherwise maligned for
cheapskating. I know budgets are tight but doing a little less crash and
bang with the rolling stock is a far better route to savings.

> are talking about.

Dana, look at this bill in context. Enough mayors, councilmen, police chiefs, and Sheriffim buttonholed their Congressmen and Senators and got it passed. There is a problem to be solved apparently. They took a route very familiar to local pols -- enabling subunits to copy state law, usually verbatim, and enforce it while keeping the fine money. Not much different than getting a local vs a state speeding ticket. In this case, it is Federal regs that are being copied and only certain ones at that.

They do not need to send the whole verstunken force to radio school, one officer and the tech from the company that does their service work is quite enough to pin a few well-known yokels jocks to the fencepost. Once these clowns are suppressed, the tech goes back to teching and tranquillity reigns supreme. I doubt that busting CBers is profitable enough to justify major investments in training and hardware nor are towns all that interested in being known as the CB version of the local speedtrap. They are, apparently, interested in fixing a few clocks and getting back to the easy life of the mayor or alderman.

Sane people, of course, should take whatever measures are needed to get off of or stay off of the local brown list.

TRUE, but since the defination of "STATION" will have to be determined
using FCC regs, the enforcement guidelines and detection will be given
by the FCC, Officer Friendly will probably want some clear instructions
on how to handle a "Licensed Amateur" who is operating on 27.555 and
the FCC will probably give some direction. It will be interesting how
this one plays out. HINT: Ain't no such thing as a FREE LUNCH.

What is happening is that instead of the Hams pissin in there own yard they go to the CB channels and start shit. All those Jokers who get out there every evening and cuss each other out with there amps inline are yous truly, HAMS. Personally I could give a rats ass about them, when DX starts rollin in there gooone. Why? because they cant be heard over the skip when its thick so they wait till the evening to key down and talk shit to each other. If they ever do in force this law I am going to sit back and laugh at the irony of the whole thing, mainly because the hams are so dead set on accusing CBers of all the interference problems as an escape goat for there own complaint made against there organization. They had to blame somebody but guess what? Its coming home to roost here real soon.

7052. Re: CB noise when over 15 MPH

Newsgroup: rec.radio.cb
Date: 2000-11-28 00:00:00 UTC
From: Matt Deremo <mderemo@mpowernet.com>
Message-ID: <5iRU5.613$3d4.148352@wdc-read-01.qwest.net>
Source record: 61051

Hmmm.. Doesn't sound like electrical noise from the truck's electrical system, sounds more like static built up from the friction of the tires on the road. Do you notice reduced static when it rains or the road is wet? If so, it's probably static from the tires. When it's wet, the water acts as a conductor and dissipates the static charge.

I once heard of a guy that attached a copper ground wire that dangled down to the ground under his truck. Apparently it helped dissipate the static charge build up from the tires when the road conditions where dry. May be worth a try.

>anymore.

It all depends on where you are at. Different parts of the country have different levels of activity. When I was in TN for 9 months, every other car had a CB antenna... now that I live in RI, I rarely see any cars with antennas... There's still plenty of activity everwhere.. the other poster just doesn't know where to listen.

Actually, I have seen quite a number of state trooper cars with CB's mainly
because they can either monitor channel 9 or 19... 9 in case anyone calls for
help (good luck!) and 19 in case there's any accidents, etc... that they should
know about.

7057. Re: Swan 1011 schematic needed

Newsgroup: rec.radio.cb
Date: 2000-11-28 00:00:00 UTC
From: Skipp <skipp@pilot.ucdavis.edu>
Message-ID: <900ql2$s3a$1@mark.ucdavis.edu>
Source record: 61056

Mike,

If you get time, snap a picture of your Swan 1011 and Email (or US Mail)
it to me. I'd like to see it and put it up on the siltronix web page if
possible. I know you can still find the 1011 manual from grace who's
listed on my web page.

cheers
skipp

: The Antenna Man <buzzards@optonline.net> wrote:
: I have a Swan 1011... I did download the Siltronics manual (Thank You!) and the radio is very different but I am muddling through the repair... My problem is a weak "S" meter reading. I replaces all but the vfo amp tubes in the rec. circuit but this had no effect. I changed all related resistors in the circuit that looked bad and that also had no effect. There is a difference between the circuit in the manual and the circuit in the radio. I may have to acquire the right manual for the Swan. After 25 year
s away from the repair business I am finding it hard to remember things! Old age is playing a part as well!
: Thanks for the help guys...
: Mike

Defy the law. I suppose so. Have you ever kissed you wife or girlfriend on a Sunday? Illegal in many states. Driven your car in the middle lane or left lane on the highway for a mile or two when you could be all the way over in the right lane. Illegal in all states. Changed lanes without using your blinker. Illegal in all states. Jay walked? Driven a mile or two over the speed limit? And don't start me on drinking and driving. Thirty-thousand DEAD because of drinking and driving each year. Sure, lets use some of the limited police budget for busting cbers using export radios.

And please Ramirez, gloating is for children and illiterate pro athletes. Give it a rest.

You are getting RF feedback into the radio. A toriod on the power leads should cure it. In Stubborn cases you may have to relocate the antenna.

i tried fixing it with parts from my 88 and now the 88 does similar stuff so i know its not the ribbon cable in the 88.
i personally think it is no further than the adder IC`s and the diodes.
i ordered new ic`from rf parts so ill find out when they get here

I will refrain from a vitriolic response, in spite of the fact yours may warrant one. A location is helpful and I have passed that information to the OO group in that region. If you would be so kind as to forward any additional information as to specifics it would be extremely helpful. Your post as written is akin to saying "a crime took place in Atlanta , Ga".

Might I respectfully suggest that these keyboards are sometimes cold and unfeeling, if you take a moment and reflect how YOU would receive the message your typing, much more could be accomplished. I doubt that in your day to day life you walk up to people and call them "Dill Wadd" and in general begin peeing all over someone's leg to start a conversation.

I will attempt to address your issues in a respectful and serious way, may I ask that you to do the same?

I have trashed more XTs then you would like to know about.

Would any of the oldtimers be interested in the monochrome or
CGA or EGA monitors I still have. They didn't sell at the last
swap meet I took them to, and they are getting in the way.

I also have a large box of old floppy drives and expansion boards.
Somewhere I have some MFM hard drives with controllers. (XT & AT)

I'm in Baltimore. I'm cleaning stuff out my storage locker.

My guess is it is coming through the mike. That's the problem point in mine.
I used a Sadelta ME-3. It has no shielding in it's stock form. Copper tape
inside the mike bonded to the other pieces of copper tape in there connected
to the shield reduced the feedback to usable. A snap on torriod at the connector
finished the project. I used the extra wires in the cord for the up/down buttons
I mounted on the mike.

It is too simple of an issue for some people. Jabber about hams getting nailed too is just plain dumb..hams get nailed frequently. Read the news at arrl.org, qrz.com, or fcc.gov...jeez...

The truth of the matter is that the complainers are just mad cuz they might get caught operating illegally. Poor babies.

By the way...the other day I offered anyone who wanted it info or help becoming a ham. No one responded...no skin off my nose but hey when you get caught on triple nickel with your galaxy and a six pill....dont say ya werent warned.

I think its a laugh to watch the bitching because it is so obviously done by the offenders.

7081. Don't Despair get your ham license

Due respect, HAMs are old and dying bred. ARRL can't attract enough
replacements due to newer technology that's more attractive. Who wants
to study for technology that's been around twice as long as the
newcomers. Instead of relaxing, ARRL truely needs to think out of the
box and do better. As to me, I'm a libertarian so go figure when I
will join the ARRL... and my Ranger 2950DX is doing just fine.

transformer oil, mineral oil, transmission fluid any of these will work fine since that load probably is only 1kw max anyhow.

7088. HR 2346 Not really that bad if you read closely

Newsgroup: rec.radio.cb
Date: 2000-11-28 00:00:00 UTC
From: Wild Bill <wildbill@wild.comspam>
Message-ID: <%iWU5.15$UH4.4363@typhoon2.ba-dsg.net>
Source record: 61087

Don't all of a sudden expect Police man to start pulling over your mobile just because you have a cb antenna. if you read it closely it says State and local government may enact a statute or ordinance enforcement rules regarding cb radios. So first off there needs to be a ordinance or statute for the police to follow in each individual town or state. they cannot go around hap hazardly without having a written law to enforce . this act of Congress only give the State and Local Governments the "right" to create laws regarding Citizen band radios although the enforcement was an- area that was strictly FCC controled. You also have an appeal process to the FCC. And in regards to motor vehicles they have to have probable cause to think you are in violation of unuthorized operations. So the towns and municipalities need to enact ordinances and statutes for the police to the enforce the law that they enact very simple process. They towns who get numerous complaints about interference now can do something about it instead of we don't handle that department they can either create some type of law then enforce it but until then we are still safe. take it as a warning to be more careful of where and when etc you key up if you dont bother anyone we will never have anything to worry about. Its just that simple.

Good point offered in this. Now all i gotta do is wait 'til the neighbors
are done watching the local news, Jay Leno, Conan..

Then all the sudden.... BAM

it's safe to key up:-)

Get to know your neighbors better, find out when they are watching there
favorite programs.
avoid this whole HR 2346 situation all together.

Who knows you might even make some friends.

Well, TR,

I am a licensed ham, and I don't like this one little damn bit! I
follow all FCC regs and there is, in fact, no reason to come after me.
But should it happen, and I have to appear before a judge to clear it up
I will be checking with a lwayer to see what steps can be taken. Be-
sides, I need the money!

Jerry

Usually tranformer oil. or mineral oil. heck even motor oil will work.
Transformer oil is the better one thou. You can ask for it at your
local power company.

Very fucking few, you egotistical, elitist asshole.

I don't see how the hell you can make a comment like that, having never been to a keydown.

Most of the CBers at a keydown are 9 to 5 jobbers, or more, that leave right after work to get to the keydown, and have to haul ass home every Sunday to get back in time to get their 4 to 6 hours of sleep before work again.

Just think of how many busts we could get running all the pedophiles in alt.teensex.binaries you fuckin dolt.

I said that a while back. Real hard. Lift the second ferrite jumper (counting back from the transformer) from the bias resistor (large, white, wirewound) and attach to ground. However, to run more than about 15 volts, you need to change tuning caps across the output transformers to limit current to a safe value and tune the new impedance a little better.

That simple.

Now, to answer your other question, yes, the capacitance does affect the tuning of multiple stages.

Each splitter / combiner is a given value, assuming it sees X on the input, and Y on the output (for typical CB amps).

Change one side to a set of 454s, and leave the other at 455s, and you will be imbalanced.

Change the cap value on one side, and you are imbalanced.

You have to keep things in balance here.

Andy is a dick.

Or, mebbe he doesn't have one.

Anyway, he is one of the people who sits at home, with his Ranger 2950 (or any of the other variants of it) and his 2 to 4 pill on average, or a multi-sweep tube amp, and tells everyone he is better than them because:

A. He runs SSB, and therefore, he is more "attuned" to radio than you are.
B. He doesn't bleed his neighbors, making him better, in all regards, and above the laws we are held to

Gee, under his guise, as long as your drug dealer next door didn't sell drugs to kids, it would be OK, no?

Two faced, elitist asshole.

Source record: 60890

If i turn on the radio and put it on ch 20, it goes to 27.325...but if i flip the 10kc switch up, it goes to 20.
Ch 1,2,3 & 4 are both 4 (27.005)
ch 16 & 17 are 27.165
ch 18 & 19 are 27.185 or sometimes 27.195
it is very eratic throughout the band and no channels are right.
I thought it might have been the MC14008B Chips, so i took them out of my working DX 88 and put them in, same thing.
So i took them out and switched them back.....now my 88 is screwed up too, but the channels are different than the saturn.
most of the channels are 10kc high and the clarifier dont slide down like it used to.
At random times, it wil just freak out and jump to somewhere else after it is done oscilatting. ex. ch 34 would be 27.995.
Switch bands and its just hit up big time.
Any suggestions?
I ordered 14008 and 145106 ic`s for both and see what happens

I can remember when I was active in C.B. and Keydowns everytime we went to this Keydown at Camp Legune Jacksonville, N.C. that we used to get the royal treatment by the local law enforcement and local businesses . Hell I even remember gettting a Police Escort thru the middle of town lights flashing, sirens wailing, stopping traffic at intersections to get to the killing fields and even had local police as spectators. Wonder how they will feel now that it has become an enforcement issue. Will they still sponsor such events or turn the other way for the sake of dollars that come into the businesses each year or will they use this as a way to increase the revenue of there fair city?

I echo Scott's fix. Had a similar problem with my
Uniden 2600. Ribbon cable to the front panel PCB
was stretched and had a poor solder job that finally
caused problems. Ripped the whole thing out and
made a harness out of hookup wire from the shop.
It's worked ever since.

The FCC ID on amateur transceivers is strictly a receiver certification - nothing to do with the Tx part of the radio. I find it very difficult to believe that American Public Safety officials are using modified amateur radios. Kenwood, Yaesu/Standard (Vertex) and Icom do make commercial FCC type-accepted radios, don't ya' know.....

Not this radically. I'm guessing the cable got pulled out of the
connector - or the connection itself is dirty and/or broken/bent.

7119. FS: Cobra 148 GTL

Newsgroup: rec.radio.cb
Date: 2000-11-28 03:09:26 UTC
From: The Packrat <spam@n7uic.net>
Message-ID: <GIFU5.85411$U46.2737917@news1.sttls1.wa.home.com>
Source record: 60903

For Sale:
Cobra 148GTL - Purchased new at a local Flying-J in 1996 and has been used for about 1 year. On the shelf the first 3 years of it's life. Have the original box, power cable, mounting bracket, microphone (practically new), and 3 of the thumbscrews. Other features are included but I think you can figure out that part on your own. This isn't a hack job as all switches and knobs do what they were intended to do and no new holes have been drilled in the chassis. Radio transmits and receives wonderfully. Over all condition is an 8 out of 10 due to regular wear-n-tear. Asking $100 plus shipping from 98038.

Thanks,
Mike C.
email: spam@n7uic.net if interested

and as always, never trust used coax. The coax is not "overkill" for a 12 watt ssb rig but I wouldn't trust it unless it is somewhat new looking and no corrosion on the center conductor

"Scott (Unit 69 Chesapeake Bay)" <upplus@hotmail.com> wrote in message news:3A2303DE.1AEEE8EE@hotmail.com...
It's great for long runs where loss becomes evident with lesser coax.
If you are really worried about loss, use hardline.

I installed a RCI 2950 to my car. I'm using a Radio Shack High Performance Magnet Mount antenna at 1.5:1 swr. On SSB it sound just awful, it sound like feedback. First the radio was connected to the fuse block (it had some modulation problem but everybody understood what I was saying), after that I connected it to the jumper cable post (not to the battery directly, its a dodge stratus with a hidden battery) the radio sounded worst. It's not the radio, I checked it from inside home and although it sounded kind of muffled it was ok. Any suggestion?

Pirate boxes look nice, but don't come close to the performance or matching of the XF and DM. Usually high input swr, and output is not as much nor as "clean" as XF.
If your brother is new to trucking and wishes to stay in the good graces of his boss and truck, you may stick with a big two pill or small four pill. More likely not to hurt the computer or other electronics of the newer trucks, and will perform well.

Jerry Oxendine <joxendi@bellsouth.net> wrote:

: I think those of us on both sides of this issue can agree that there
: WILL be some mistakes made that will prove costly to both the
: radio-using public and the LEOS. Can you spell L-A-W-S-U-I-T? I can
: even invision one or two LEOS losing their jobs for hassling the wrong
: person with the I-am-the-law round these parts, yuh h'yar attitude. As
: good as it sound to the other hams that are snickering over this, I
: say it is a BAD thing.

Regardless - the law does not just give local authority the right to enforce Federal law. What it does do is give state/local lawmakers the right to create laws/regulations to make usage of CB radios contrary to FCC rules. They can then enforce those laws/regulations.

So it is not quite as simple and straightforward as some have been claiming. Note that, since these will be state and local laws, they can more easily be fought in court.

One of the big disadvantages, other than most of the local LEOS not having the slightest idea what a radio even looks like, is that the laws/regulations that will be created will not be uniform.

Hams that think they will be safe, because of their license, are wrong. If they operate out of the Ham bands, then they are breaking the law as well, and are just as liable to get in trouble as the CBers.

They may just do that - if they manage to get some local laws passed and there is enough money in it for them. Witness the so-called "drug war". If the police could not confiscate everything in sight, even without charging the owner with a crime, and require you to sue in civil court to get it back - there would not be so much emphasis on busting people for drugs.

That is the point that all these hambo-rambo types have been missing.

Now that they have vented their spleen, those types can go crawl back
under the rock they slid out from under. Happy holidays, Bill.

I know the decent hams from the crybabies.

I can't stand the CB'ers that cuss every other word and crank it up
so loud they splatter on my sideband QSO from 10+ channels away.
I don't normally AM, but every now and then it's fun to phreak!
(It's so easy to get the drunks upset, like pulling strings.)

And the kicker is our SSB group was invited by a dual operator to
come by and see the action firsthand. Our SSB group is about 50/50
with new members taking their tests. I have given my old copy of
the RS technician course to the group to pass around. Two members
have used the tapes to study their code and have passed it because
of my generosity. I am lending my "Tune In The World" tapes to
another local, so he can study them. I'm keeping the book for
all the formulas and other info in it. If they can hack the code,
more power to them.

Here's a good chart I found:
http://www.texasstar.com/code.html

If we are a species in danger of becoming extinct, then how come my ham courses are always full of young folks? And the suggested 28.025 is, of course, a CW frequency according to band plans, and any transmissions there on Antique Modulation would cause unnecessary interference, surely you don't want that? Gary

I had to pause for the 'cause for a sec, but you know what you're talking about, the legal extortion thing extends not ony to the beer but goes back, what, Seagrams, Kennedys, and if we wanna go farther to bootleggin' (don't ya' just love the way it sounds?) and prohibition, it gets near the era of tangled web weaved so well. Jackson, Sharpton, Republicans, Democrats, Cops, Federal US Marshalls, media, it's a freakin' circus down here. You shoulda seen them newspeoples in Tallahassee 2 weeks ago when they all had to give up their oh-so-precious accomodations to the football fans that had rooms booked for the FSU vs.UF game since 1975. Now that was heeeelarious! Them media folk had to take a backseat in their remote broadcast vehicles and not get a bath 'till the day after the game. Serves 'em right! Kinda makes it all worth while....somehow1

Respectively, "becoming extinct" is your words, not mine. Just the
fact that you took the time to reply suggest that you are worried
about the declining ARRL memberships too. Maybe you can recite the
amount of HAMs and ARRL memberships for the past forty years?

Face, HAM licenses are way down and are continuing it's general slide.
ARRL has been it's own worst enemy in ways such as dis-infranchising
the 11 meter people... which continues today on ARRL's website.

I wouldn't single out AM as an antique since there is much about the
HAM bands that are just as so.

FInally, compared to the 10 and 12 meter bands, the 11th is far out
worked. I believe that the needs of the few should not out-weight the
needs of the greater. The FCC should accommodate this principle more
so than they've done in the past.

FLR,
Stator

Sir, it is unfortunate that you consider yourself a low life Cber. It has been my experience, that like in life, most of the CBers I have met are decent, enjoyable people. I enjoy the conference as it enables me to show that as a group hams stand ready to extend the hand of friendship to others in the radio hobby.

I am sorry that you feel that a ham has to "slum" in order to have discourse in this conference, I, on the otherhand, have enjoyed most all I have met on here.

At these freqs the thickness of the elements becomes important. A more applicable formula would be 5906/freq in MHz = length in inches.

7165. Good Used Test Equipment

Newsgroup: rec.radio.cb
Date: 2000-11-29 00:00:00 UTC
From: tomg@fullnet.com
Message-ID: <903an1$3me$1@nnrp1.deja.com>
Source record: 61039

I have a lot of REALLY GOOD USED TEST EQUIPMENT for sale, VERY reasonably priced, at

http://www.fullnet.com/u/tomg/gooteesu.htm

I have lots of Tektronix oscilloscopes of all types (JUST GOT 33 MORE!), lots of 7000 and 500 series plug-ins (JUST GOT 50 MORE!) and mainframes, Tek manuals, lots of Hewlett Packard (HP) equipment, General Radio items, and many other manufacturers' test equipment and accessories, including some tube tester units, curve tracers, spectrum analyzers, noise/distortion testers, signal generators, meters, power supplies, etc. I also have a varied selection of new electronic components and used vacuum tubes/valves.

The equipment is all inspected and tested (by an electrical engineer (me)) in detail, and working, before being sold. Cleaning and minor repairs may also be done. ALL EQUIPMENT HAS A MONEY-BACK, RIGHT-OF-RETURN GUARANTEE. Any defects or problems that I can find will be noted in each item's description.

I accept credit cards (through Paypal (it's free)), money orders, personal or company checks, cash, gold, ...

Don't like my prices? NO REASONABLE OFFERS WILL BE REFUSED! Please, take a look, right now.

Thanks, very much.

Tom Gootee

If you take a look at the "HAM Radio Outlet" catalog, they have an FRS made by Pryme that puts out 5 watts (it's on page 4). I do not know the specs of this unit, but 5 watts should get you where you want to go. Anybody know anything about this radio ?

Richard.

There is a good chance that this may be RF feedback through the mike.

I cured my problem with a couple fo snap-on RF chokes on the mike lead.

Richard.

>i have built a few dummy loads to test amps with and i use peanut oil

How many watts does it take to get the peanut oil up to temp. to fry turkey ??
I was thinking about buying a stainless steel turkey fryer. What is the max
temp rating of the dummy load ??? This may work out pretty good cause I need a
need a big dummy load and a turkey fryer.
Can you remove that dummy load from the 1 gallon pail ???
Lemme know
Thanx
Randy

yes ive seen this although the numbers are slightly different.....you have diodes asocieted with the ic's that control the channel board..check the diodes on that sam board..clearly if know one has touched the vco of any tuning inductors on the board, this is your problem...why did you change an ic without knowing it was bad? how did you determine it was bad..if you have radios like that i do repairs..i have plenty of references and i will answer questions if needed....rick

Cobra 142 GTL base 40 channel am/ssb cb. this is a beautiful radio. it has been well taken care of. I am the original owner of it. I took it to a cb shop 23 miles away and talked to someone back at my town. the modulation resistor has been cliped but nothing else. no extra channels but can be added. the radio looks brand new. no scratches. the radio was put on a dosy watt test meter and it showed it keying 4 watts and it swinging 20 on AM and 35 on ssb. It has a 2SC1969 final in it....do not have the box with it but still good radio. garenteed to work.
$80.00 plus shipping

They call it a "Family Radio Plus" model PR-460. It is actually a
GMRS radio. It looks like it has a BNC connector on it, but the
picture is not too clear.

7178. Ballot counting according to Dr. Seuss

Newsgroup: rec.radio.cb
Date: 2000-11-29 00:00:00 UTC
From: poisenivy <franc1@bellsouth.net>
Message-ID: <dAbV5.7741$wA6.48511@news1.atl>
Source record: 61102

THE BALLOT COUNTING, ACCORDING TO DR. SEUSS:
Can we count them with our nose?
Can we count them with our toes?
Should we count them with a band?
Should we count them all by hand?
If I do not like the count,
I will simply throw them out!
I will not let this vote count stand,
I do not like them, and AlGore I am!
Can we change these numbers here?
Can we change them, calm my fears?
What do you mean Dubya has won?
That is not fair! It ruins my fun!
Let's count them upside down this time
Let's count until the state is mine!
I will not let THIS vote count stand!
I do not like it, and AlGore I am!
I'm really ticked, I'm in a snit!
You have not heard the last of it!
I'll count the ballots one by one
And hold each up before the sun!
I'll count, recount, and count some more!
You'll grow to like this little chore!
I will not let this vote count stand!
I do not like it, and AlGore I am!
I won't leave office, stayin' here
I've glued my desk chair to my rear!
Tipper, Hillary, and Bubba too,
Are telling me that I should SUE!
"We find the Electoral College vile!
Recount the votes until WE smile!
We do not want this vote to stand!
We do not LIKE it, AlGore-I-am!"
How shall we count THIS ballot box?
Let's count it standing in our socks!
Shall we count this one in a tree?
And who shall count it, you or me?
We cannot, cannot count enough!
We must not stop, we must be tough!
I do not want this vote to stand!
I do not like it, and AlGore I am!
I've counted till my fingers bleed
and still can't fulfill my counting need.
I'll count the tiles on the floor

and even count the ones next door!
And I will not say I am done
until the counting says I've WON!
I will not let this vote count stand!
I do not like it, and AlGore I am!
What's that? What? What's that you say?
You think the current count should....STAY?????
You do not like my counting scheme?
It makes you tense? Gives you bad dreams?
Foolish folks, you're wrong, you'll see!
Your only care should be for ME!
I will not let this vote count stand!
I do not like it, and AlGore I am!

7179. Problem with Cobra 25LTD Classy

Newsgroup: rec.radio.cb
Date: 2000-11-29 00:00:00 UTC
From: The Packrat <spam@n7uic.net>
Message-ID: <1JbV5.93316$U46.2986738@news1.sttls1.wa.home.com>
Source record: 61103

I have a 25LTD classic that had a shorted cap on the transmit line so when you turned it on, it transmitted. I replaced the cap and now receive audio is so low that if I turn the volume all the way up and stick my ear against the speaker I can hear people. I connected an external speaker and same thing. I connect headphones and I can hold a conversation. I plug it into the pa lead and same volume there but when you key the mike inn pay mode it works. It would seem the audio amp is good with the last test. Anyone have experience with this problem in a cobra radio? Oh and its not the squelch circuit as squelch does still work.

Thanks,

Someone who cant spell SOWN posted:

So For all you Hambo's Now its time to Reap what you have Sewn.

My reply is:
Hey you spell that SOWN not SEWN.
To sow is to plant, to sew is to be a tailor.
To reap means to harvest.

Ham's didn't pass this new law, fella. BUT most of us are pretty glad it happened.

Another one of the lawbreakers complaining about the law...sheesh...Write your congressman...just use spell check when you do it....

From: n8wwm@aol.com
Message-ID: <20001129134251.03165.00001659@ng-fg1.aol.com>
Source record: 61110

The directions exist. Be you a ham or a cb'er, you are not licensed to operate on 27.555. Period. Amateur and CB bands are clearly designated and Hams have questions about bands presented to them on tests. CB's have 40 channels because thats what the FCC allows. Period.

>Officer Friendly will probably want some clear instructions
>on how to handle a "Licensed Amateur" who is operating on 27.555 and
>the FCC will probably give some direction.

The FCC does accomodate you. They make it possible to get an amateur license.

"dis-infranchising"?! Geez, you've been watching too much election
coverage!

> I wouldn't single out AM as an antique since there is much about the
> HAM bands that are just as so.

Care to give examples? Just because something's old doesn't mean it's
bad. What do you expect?! Everyone to abandon the HF freqs for the
microwave bands and sattelite activity just because HF and certian
modes that are used on it are "antique"?

> FInally, compared to the 10 and 12 meter bands, the 11th is far out

> so than they've done in the past.

It is? "Maybe you can recite the amount of [CBers] and [local CB club]
memberships for the past forty years?" CB has been in a steep decline
in many parts of the US. Just 4 or 5 years ago, when I was living in
VA, we had lots of people on the CB that came on every night. When the
internet really started making it big and more and more people got
computers, the radio became more and more quieter. When I asked where
everyone was, they were all on the internet, chatting on ICQ... When I
was in TN for 9 months, the majority of vehicles had CB antennas. Here
in RI, I hardly see any CB antennas...

Hey, guess what: them hams playing games on CB? We WANT them jokers busted. Especially them.

(PS> You may wanna rethink the phrase "escape goats")

<< What is happening is that instead of the Hams pissin in there own yard they go to the CB channels and start shit. All those Jokers who get out there every evening and cuss each other out with there amps inline are yous truly, HAMS. Personally I could give a rats ass about them, when DX starts rollin in there gooone. Why? because they cant be heard over the skip when its thick so they wait till the evening to key down and talk shit to each other. If they ever do in force this law I am going to sit back and laugh at the irony of the whole thing, mainly because the hams are so dead set on accusing CBers of all the interference problems as an escape goat for there own complaint made against there organization. They had to blame somebody but guess what? Its coming home to roost here real soon.

i would say the growth of AT,SD,IR, and others that are heavy wieghts in the dx world shows that the cb dx scene is just as alive as ever if not more but i must agree and say that the local scenes are dying off but it has happened during the solar peak of every solar cycle since cb was created. its the same thing that killed the cb boom of the 70's and did the same thing in the late 80's early 90's and its doing it now. CB radio has a really high turn around. guys get big into the hobby and spend a lot of money fast and burn out faster. happens everyday across the country.

Ludicrous. You are awful quick to pass judgement, which often can come around to bite you in the ass! I don't do drugs, but I'm against the war on drugs. I don't drink, (oh, maybe a single beer once or twice a year while fishing) but I'm against random DUI checkpoints. I saw Vince Bugliosi (IF you are old enough to remember him) on the lecture circuit, anti-drug war stance, same with William F. Buckley. Just because one does not agree with a law, a criminal it does not make. Maybe you agree with ALL the laws in this country. Maybe you want more. Maybe you are the Orwellian type who needs to be told what to do, how to act, thats ok, the country is full of those folks and they don't even realize it. The apathy continues....
Oh, and one more thing, better watch who you get on about grammar or spelling, chances are they know a great deal more than you concerning electronics. Since you somehow feel yourself above the rest and owe it to the group to point out spelling errors, let me give YOU a simple lesson. English went out the window a long time ago, right after the colonists kicked some English ass. We collectively and successfully hybridized and bastardized the English language to the American slang it remains today.,, and in here, we'll spell it any way we damn well please. We know what the posters are saying. It's trolls like you that have absolutely nothing to add except to offer their critique of other folk.

To all those who care. I've as well as many others have been beaten into submission. The new bill HR2346 was the last straw. Today I took all my dreaded illegal cb radio equipment to the dump. Tonight I will be going to Radio Shack to pick up a study guide, and start studying to aquire my new license. Some day, with a little hard work and determination, I just may be able to john the elite. Gee wiz guys, I guess if I can't operate a illegal cb, I'll just have to settle for second best. Any way wish me luck guys.
By the way. Does any body know how to put a Roger Beep in a Yaesu FT-100D?

No the FCC doesn't. It's the ARRL that does and sets the rules for who
they license. I believe in a principle that this is wrong as the ARRL
doesn't pay for the bandwidth like cell phone companies do. If you
want to know where I'm coming from, research the Libertarian party
beliefs. If on the other hand, the ARRL pays for it's bandwidth, I
have absolutely no problem with licensing by the ARRL.

Hey, when I slide around my export Ranger, the vast majority of the
radio traffic is in the 11 meter band.. by far. It is no contest. You
and everybody else will not or are not capable of recite the ARRL
membership or HAM licenses. How about 10/12 meter rigs to CB sales
then? Are you saying that 10/12 meter rigs far out sell CBs? I would
be very surprise if this was the case.

If you have no license he had better had a search warrant , if you are a ham
you have a license to loose so you may want to let them in to inspect your
station.

Thanks for your help guys !

I will try the mineral oil suggestion, as it is easier to get hold of, and I
do not plan on using more than 100 watts.

Cheers !

Richard

Fred this law only gives towns the right to pass statutes and ordinances of which they then can enforce. You are correct it is mainly meant for interference cases where police had there hands tied and couldnt do anything. this is where you will come into play as an interference "expert" and help them resolve or find the cause of the interference. But I want to know what will you do for the people who are operating 100% legal, stock 4 watt out of the box cb , now I know your gonna say well everyone is peaked up or this or that but i do know a stock radio can and will cause interference i think the fcc calls it audio rectification, but they still interfere with there neighbors phones, baby monitors, stereos, computers etc. ? What then do we get our radios taken away? Are we at fault no we are not. the fault interference from poor shielding it is like a disease the problem is already there we are just bringing it out in the open by our transmissions Are we automaticaly at fault? I know is it innocent until proven guilty but i don't think that will ring true in this case. have at it!

Source record: 61138

With all due respect Mr. Pain, many of the hams on here, myself included, have an interest in any area of radio. Life is not a series of "either / or's" I find this forum as well as the amateur radio forums interesting. Many, on here, have said hams are stuck up and have no interest in CBers. We do have an interest in CBers, in spite of the vilification by the few, trying to prove the contrary. My private E-mail shows that many on here are interested in amateur radio, but appear to be drowned out by the few that would be unhappy if they were handed a $100.00 bill if it came from a ham.

7215. Machine-Gun like noise on 27.960 lsb?

Newsgroup: rec.radio.cb
Date: 2000-11-29 00:00:00 UTC
From: Dennis <dennis1449@dcwis.com>
Message-ID: <B64AD5C7.C1C0%dennis1449@dcwis.com>
Source record: 61139

Anyone know what this is? Freebanders around Chicago use this frequency and during the afternoons there are loud transmissions of a machine-gun like noise at varying speeds covering them up. I here these transmissions at various frequencies below 27.960 also.

he is using a paint can dummy load why waste money etc the best ones are 1 kw put some cheap old transmission fluid in it and be done with it . If you had a nice fancy 3-510 kw load that is a different story. cripes the oil is going to be worth more than the paint can load.

richard you could piss in the damn thing if your only running 100 watts , transmission oil is more than you will ever need and probably cheaper than 1 gallon of mineral oil. Ever heard of severe overkill.

Just go to the thread about the ham test online and study for free.
If you want code, download a program called "Ham University". Free.

I think you have done an injustice to the CB community at large here. Some folks just may not be interested in getting a ham license. Years ago, I tried convincing a friend (with whom I had gone on many CB bunny hunts) to get his 'ticket'. He said he just wasn't interested. Since both he and I had our 1st class radiotelephone licenses, I assumed the problem was morse. Getting my voice in best possible tone I sent (in morse) 'but morse code is easy' - at about 20 WPM (my max by voice - 25 by straight key, 60 with a keyer). I wish I had a picture of the expression on his face when he replied 'I know it's easy, I'm just not interested'!!!!!! Turns out he was a high speed CW operator during WWII (this incident happened in 1970). He could easily have passed the tests through extra, but he truely did not want to. Why? Take a guess. Go ahead and take a wild guess. If you don't know, just ask this NG why they think he wasn't interested. I'll give you a big hint, it had everything to do with attitude - and I'll guarantee even today at age 79 he could likely chew you up and spit you out with technical knowlege (maybe not, but it would be likely). Please don't go and paint all CBers with a big brush due to the antics of a small minority. Many of these folks know more than you give them credit for, and there are some that could chew you and me up and spit us out with technical knowlege. To the CB community - please try not to paint all the 'hamsters' with a big brush either, not all hams look down on CBers. Truth be known, I've found a bunch of good people on the CB boards - with the amateur radio, I've pretty much kept to a couple of repeaters on 440 MHz. I'm not interested in 14.313 (or the antics on 75 either).

73s from Rochester, NY
Jim (AA2QA - former WB2OSP, WA3RJX, N2JH)

stupid question did you replace it with the same value? perhaps the reason the cap blew is something else is still on the fritz. check the am detector diode

The above is wrong. ARRL does NOT license anybody. All licensed civil-
ial stations are licensee of FCC, not ARRL. ARRL *attempts* to influ-
ence FCC policy towards Amateur Radio in a favorable manner. Hams join
ARRL just like they join CB clubs. ARRL HAS no "bandwidth". The Ama-
teur Radio service is authorized operations in certain bands by FCC,
not ARRL. The main reason hams have the extensive frequencies they en-
joy is the proven, reliable, long-standing record of public service in
times of disaster or local need. Hams provide backup communications in
flood, fire, tornado, hurricane, earthquake and all kinds of scenarios
when phones, police comms, cell towers and digital comms go down. Thus,
in this way, they "pay" for the bandwidth they enjoy. One example is
the Dutch family that was attacked at sea by pirates. The 13 year old
son was stabbed and otherwise severely wounded. It was ham radio that
got them help, particularly the Maritime Mobile Service net, and ulti-
mated saved the boy's life. Another example is a small yacht that was
taking on water off Argentina. I was on the air at the time and monitor-
ed the efforts of this ham net. I did not participate because profes-
sional etiquette dictates that one stand by unless ASKED to assist, but
I enjoyed listening to the very professional and prompt action by hams
to bring rescue forces to bear.

You see, Amateur Radio is not always about yakking, yakking constantly
about nothing. While this certainly is a part of the hobby, there are
FAR more things than just talking that makes Amateur Radio interesting.
It is a hobby of learning, building, using, and trying to create good
will in the world community in spite of the few who would place their
own interests above others'. As long as ANY hobby is pursued, there
will be buttholes that make it bad for the rest when it is a hobby that
is a shared activity. Even in professional life, there are bad eggs,
such as bad cops, bad bosses, bad co-workers, etc. That does not mean
that the entire scope of an activity, whether personal or professional,
is bad.

At any rate, as I said, bandwidth occupied by hams is not controlled by
ARRL, and said bandwidth occupied by hams is "paid" for by the service
provided to the community, state, and Nation.

Greetings!

What does the RX meter say? If it's working good, check the IF section from the detector diode down to the volume control and the input caps on the audio amp chip too.

More than likely you have a shorted cap or a failed diode on the RX line too. It's not uncommon to find a TX cap shorted. In doing the repair, you need to verify RX voltage to the receive side.

Using a dummy load, key the radio up and check/verify that RX side does turn off, or if you get 2.3 volts around the RF amp sections.

In rare circumstances, the RF gain pot could fail causing the RX voltage not appearing on the RF amp IF mixer - but the cap on the RF gain adj. line could be shorted causing the pot to fail.

As a quick check, see if you get the IF "hiss" that is present, like snow and the hiss on a TV - it would be a good clue that helps elimiate a section of the RX that is getting voltage, just nothing is getting to it from the RF receive.

Check the ANL section, and the NB section - for shorted caps. Especially the ANL section, a cap of about 1uF 50V is wired backwards, positive side to foil ground and is normal. If this shorted, it can cause reduced audio. [see above]

Did you check for a shorted cap on the audio output line? There is a ballast resistor for the speaker - check to see if it's within it's value.

Some people put talkback in a radio - could we be looking at a possible short in the audio section?

WB,

I was sitting here reading the threads, and I got to wondering if it
might be a good idea for ALL radio operators to obtain copies of the
law as passed and keep one at home and one in the glove box of the car.
I don't know if it would help, but one could show the officer a copy
and *attempt* to show that his station is legal (if it actually is).

Also, it might be a good idea to have a copy of the FCC "disclaimer"
that is on electronic gear to show the officer that such items are
not protected from interference and explain that as well. I don't
know if such documents would help or even be appreciated by the LEOs.

Anyway, I intend to get these copies and have them on hand just in case,
as well as my ham license in hopes of "shooing" them away. LOL!

Greetings!

I think you need to go to the fcc.gov site and re-read what the FCC
does with ARRL.

ARRL has been left with the regulations to be self-imposed on their
operators. The FCC only issues call-signs and can enforce issues if
the ARRL won't.

Complaints directly to the FCC due to issues around ARRL operators or
those licensed by the FCC under ARRL - are simply forwarded to the
ARRL.

7237. Re: HR2346 : hams beware

Newsgroup: rec.radio.cb
Date: 2000-11-29 00:00:00 UTC
From: Bob Weiss <bweiss@carroll.com>
Message-ID: <3A25887A.DE4AF51E@carroll.com>
Source record: 61211

In a case of fundamental overload or audio rectification, the problem lies with the owner of the TV, baby monitor, garage door opener, stereo, etc. As long as the transmitter (CB, amateur, broadcast, marine, or whatever) is being operated within legal limits for the service (power, antenna height, spectral purity, etc.), the interference is NOT the problem of the interfering transmitter owner. Part 15 devices are REQUIRED to accept any interference from other services , including that which may cause undesired operation. It is the responsibility of the equipment owner to provide filters, bypass caps, shielding, etc. as needed, or to buy higher quality equipment that incorporates proper RFI suppression. The neighbors may not like this answer, but that is the LAW. Of course, you may offer (at your own risk) to help out by suggesting/installing high pass filters, ferrite beads, bypass caps, etc. in the name of being a good neighbor, but you are NOT legally required to.

Of course convincing the local cops of this fact when your neighbors are bitching about RFI on their crummy equipment may be a bit of a challenge. Complaints like this should be resolved by the nearest FCC field office, not local cops who probably can't tell the difference between an antenna and a lightning rod! The new law is a BAD IDEA, and will eventually fall out of use (if not be removed from the books) when it causes more headaches for local LEO's than it solves. If the transmitter meets legal requirements, federal law is on your side. If you are running excessive power, overmodulating, using unauthorized frequencies, that is another story.

Keep it legal, or at least keep your signal out of your neighbor's TV, and you have no problems. If you are running a transmitter of any kind, a friendly attitude toward the neighbors and quick attention to possible interference complaints goes a LONG way to prevent the local fuzz from ever getting involved.

Greetings!

That is an excellent idea, a copy of part 15 wouldn't hurt either.

That clause is what caused this whole mess in the first place. No one enforces [FCC/ICC] that issue on new and cheap electronic equipment so they don't have filters in these devices - therefore the problem.

A stock radio will do the same thing to a TV that falls under the part 15 disclaimer. No filters, all noise...

On Wed, 29 Nov 2000 17:43:56 -0500, while the modem was pondering it's navel, Jerry Oxendine <joxendi@bellsouth.net> dissertated the following:

:+> Also, it might be a good idea to have a copy of the FCC "disclaimer"
:+> that is on electronic gear to show the officer that such items are
:+> not protected from interference and explain that as well. I don't
:+> know if such documents would help or even be appreciated by the LEOs.

Regards! _____

Handy,

Certainly ARRL and FCC work together on issues that affect ham radio. But ARRL DOES NOT license hams, nor does it have "bandwidth" as suggested by the post I responded to.

Complaints--and I assume you are speaking of enforcement issues--are NOT handled by ARRL. I believe Riley Hollingsworth has been handling that quite nicely in the last couple years.

I am not a member of ARRL. My license was NOT issued by ARRL but by FCC. ARRL had nothing to do with it. That's all I was saying. ARRL is NOT the regulatory agency regarding ham radio, nor does it have "bandwidth". ARRL merely attempts to influence, and often does, FCC policy towards hams in a favorable manner. Yes, they often work together on issues, but FCC doesn't always do what ARRL wants as in the recent proposal to FCC for expanding PRB-1 to include restrictive covenants in apartment complexes and condos. The issue was submitted twice, as I understand it, and was turned down twice. ARRL has no authority over hams in general. You can tell them to take a hike if you want to and there's nothing they can do, in and of themselves, about it.

I think we are confusing a regulatory agency with an affiliatory one.

Jerry

You would be amazed at how fast a room can be cleared by the introduction of
the local Section Rep from the American Registry of Rotten Lids.

The ARRL does not set any rules for anything at any time except for their
own awards and contests. They are one of several groups doing VEC Volunteer
Examination Coordination. Your ticket still comes out of Gettysburg.

I just finished putting mine together with 20 1K 1/2 watt resistors.
I used 4 packs of RS part # 271-1118 connected with RG-8M braid.

I will take a picture of it before I dunk it seal it up.

Should I just fill it with motor oil or ATF? I'm leaning
towards ATF because of the wetting factor of that fluid.

How much power can it handle wet and what kind of duty cycle
should I use?

It's illegal to make an external antenna for FRS radios to get extra
distance. They are set to no more then 2 mile range so as not to need
a license and not to interfere with others.

Its the TRUTH, sorry this has nothing to do with logic, it has to do with a bunch of Amateurs acting like a bunch of idiots on 11 meters. The people I know run power from time to time but just to shoot skip, they don't get out on the band and make threats, give out personal info about each other, use profane language, while running mega watts to talk local and key on each other.

These fools are HAMS, yes the one that are supposed to up hold the law and be a shining example to the rest of the RF community. I have already told you where these offenders are, so what are you waiting for got get em boy!!!!! Or would it be a embarrassment to bust your own? Hmmmm?

You can also try to outbid someone on ebay, or read all the posts
here. I see base radios for sale all the time. You can also run a
mobile radio off a regulated power supply (no wall warts).

What's with "the cryer" trasmitting ALL DAY on 27.555 USB ?

I'm in Central Florida USA and the signal appears to be skip (not local).

Does anyone else hear this annoying transmission?

Thanks,

Alex

The adjustment SCREW (not switch) works exactly like the internal pot on an Astatic 1104C. It is actually the MAIN lolume adjustment for the microphone. The knob on the outside is mainly more as a fine tune control. Set the EXTERNAL knob at full and adjust the one on the bottom for as much as needed to gain maximun audio without sqeal and then back it off a hair. You can then do as you like with the knob on the outside of the mic.
Sidekicks can have a very bassy bend to them much UNLIKE Astatic mics.

There is also a hole on the bottom of the mic also to ajust something,
what is that for? I might have misunderstood the question. I knew what the
switch was for.

Message-ID: <3A24929F.24D6@bellsouth.net>
Source record: 61002

Mr. Pain,

I am not decrying or arguing with what you say. However, if what you say were to come true, those people who came onto 2M/70CM with the lingo and cutesy sayings still have to deal with the control ops of the repeaters in question who might simply turn the machine off or make them "private" repeaters with either tone access or DTMF codes supplied only to those he *wants* to have access. That would, indeed, be sad. Yet such stuff wouldn't be accepted nor, likely, tolerated. NO flame intended, just MHO.

Contrary to what you say about those "old" fart hams being a dying breed, you are misinformed. Just tonight, I had a visitor to my shack who is VERY interested in radio in general and particularly ham radio. He is 12 years old. I have had MANY conversations with hams as young as 8 who got their licenses under the *old* requirements. Some were Extra licensees. I get a kick out of QSOing with these youngsters. From the variety of ages of hams I talk with both on and off air, I get exactly the opposite impression of the vitality of amateur radio. The young man, a very intelligent and well mannered boy told me that he had often listened to his uncle's CB and was not interested in it because, as he put it (and I am only quoting what he said), all they ever say is "Mercy me, 10-4 there, I know whatcha mean there, shore do there, break-break, gimme a 10-36 there, and, there's a smokey at MP101". Now that's "his" opinion and it was the reason he asked to come over for an evening of radio demonstration. I just can't see any dearth of new hams at what ever age. The hobby is alive and quite well as is CB. My young friend left quite excited, and I wish him well.

I also don't see CBers being run off 11 meters, either--only those who operate illegally or cause complaints. I don't like the local enforcement thing, either. I have to hope that the old adage holds true: Outta sight, outta mind. If a CBer operates his station accord-ing to the law with the allowed 4 watts, helps his neighbors solve any issues, and basically keeps a low profile, I doubt he'll ever have any trouble.

Best 73

Jerry

How hard would it be to hook a base antenna to a hand held family radio? And how long would the antenna have to be?? I would like to make the 5 mile trip to my friend on just millawatts!! I would assume i would have to remove the fixed antenna and solder the coax to the spot where it makes contact to the board, but where do i solder the braid?? also what ohm coax for that freq? Im not trying to plug up the channels but i live WAYYYYYY out in the sticks and dont have anyone to talk to, so i just need to get out a little futher!!! thanks for the info. 223 swamps

(taken from http://www.panix.com/~clay/scanning/frequencies/frs.shtml)

Braid to ground. The IF cans are usually grounded, otherwise hook to power -.
Make sure to use the 500 Mw model and use real good coax. Losses at 460 MHz
are much greater then experienced at CB frequencies.

Good point. I just figured that listening to a simple SW rig can garner you signals from many different areas, so a general idea of national (if not worldwide) activity can be safely guessed.
I just hope for his sake that "Ol' Man Tube" doesn't REALLY think it's all dying out... how depressing is THAT thought?! :-)

<rest snipped for brevity>
Yes, all of that may be true, but is *not* any indication of a dying hobby.
You've been around long enough to have noticed such a decline, to be sure...
but all I"m saying is that your conclusion is erroneous. There are millions of
people on this continent, and millions more around the world, who still rely on
their radios every day, listening AND talking.
If you'll go back to the times you mention, and perhaps look into some of your
older radio mags, you will surely find that "Radio" as a hobby has been
successfully dying for the last half a century... and with all respect to those
radio 'experts' and old-timers who have predicted the death of Radio so many
times in the past... it just ain't so.

DOUGLAS W. ADAIR AKA: N8WWM

You shouldn't be saying things like the previous posts IE: Dummy Loads as anyone here can get your address from http://www.qrz.com and send you tons of hate mail. If you insist on harassing 11meter operators, you shouldn't include your call sign! But I don't think that CB'ers will take the time or waste the money to send you mail when they can just overload your email!

The FCC doesn't need a search warrant to levy a fine... if you refuse an inspection (whether licensed or not, your activities on the air and equipment are under FCC jurisdiction) ..... Don't believe it?? ..Do yourself a favor and read the FAQ page at the FCC website on enforcement and your rights... click below.

From: Gary <heppu@boxi.net>
Message-ID: <905g0u$6hc$1@news.kolumbus.fi>
Source record: 61175

It now seems like a good time to sum up the arguing on this newsgroup-
please correct me if I'm wrong.
1. I'm a troll
2. Illegal CB rules
3. Hams are snotty
4. Hams are trying to make everyone a ham - please refer to point three and
two for actions
5. Nice and legal CB stations shut up, since the hams and illegal Cbers have
taken over
6. Anyone could pass a ham exam, even online - but they don't want to.
Again, please refer to points two and three
7. The FCC wants to confiscate ham gear, they're not interested in illegal
CB (who incidentally live next door to their HQ)
8. Only morons- who are old-fashioned anyway- use Morse code, even though
it's child's play to learn it
9. The arguing will go on for about 56 years
10. The world has learned a lot about the American presidential election,
and that George W. Bush has used a *CB radio*.

BTW: thanks, Dave Letterman, for the idea. A tip of the old hat!

Gary, oh8mfh, ex-CB,
general fool

I don't think the local hams have read this. They use FRS channel 1 as a simplex chit chat channel. Sometimes they even use their ham call sign out of habit.

They talk about modifying their 440 rigs for the extra channels, and how the extra natural bandwidth of the antennas is wider at the 440 to 460 MHz frequencies. I hear these guys on FRS, GMRS, the dot frequencies, and of course the new Murs channels. I polish off my scanner in warm happiness every day.

The technical hour is great, they tell of adding on antennas to the FRS radios and which amps will work with them.

They just need to learn to not use their ham call sigh as much.

Jay in the Great Mojave Desert.

This is all completely accurate. However, posting this rule makes it clear for all to see that there is absolutely no restriction on remote mounting the Microphone and control components and mounting the entire FRS radio (with attached non-removable antenna) in a weather-proof enclosure at any height that doesn't violate aircraft flight path restrictions. This is the path often taken by commercial license holders of other services in the commercial realm with similar attached antenna restrictions. This is even supported by some of the manufacturers, who provide remote control functions with hardwire extensions to portions of their available lineup.

Peripheral sniping of the original subject for the point of making a point is completely according to Hoyle, as long as the poster understands that the interpretations of Hoyle take on a wide interpretation before gunplay interrupts the card game and the players are forced to leave the casino........

Anyone wishing to make a point anticipating finality siding with their interpretation must first understand that their interpretation must represent finality. All the interpretation below depicts is the wide range of deviations that are allowable by law. The end result is the same as if the post was never made.

So much for trying to make an impact. Facts count here. I actually feel that JAG would take on a more aggressive legal pursuit on the posting of the rule in their honor than the FCC would take against users of the FRS service if the subject of Court was factored into the equation.

Wanna' try for 2 humiliations out of 3?

Yo' James...I get your drift, but I kinda enjoy the colorful vernacular on the internet. Better enjoy it while we can 'cause the plan to regulate and tax the internet IS in place, and internet freedoms will disappear sooner or later, the time now I think is 2006 or 7. Some bozo will probably ask me for the exact reference, but I am involved in other endeavors at this point, but a plan does exist. Others on here would know about this better than I (hear that hackers and phreakers?). The first step is to make everyone pay, second is pay more, and the third is regulate, then it will be piped in info., censored, sanitized and regulated much the way other mainstream media outlets are today.

Greetings!

hmm...ok..YOO...Considering this new law, I may have a different avenue to take care of the mess many hammies are causing up here...

Oh well. I don't believe that I came out and said ARRL issues license, the FCC does, as far as database goes, but the rest is up to the ARRL.

A couple of years ago [5 actually] I was a ham, and I got tired of the "rambunctious rowdies" that used to hang out on a local superlink repeater. I emailed the FCC on this, they sent a "form" letter asking me to take this up with a Official Observer. [Actually an HTTP link to a page on the FCC database that describes what needs to be done - and once this "page" is filled out, send it to the ARRL for investigation.]

Ever dig thru a database to find "OO's"? Trying to get one convinced that there is a problem is another. As far as it went, sent Email, no confirmation, no notice of a dead SMTP, nothing. To that nothing happened and thats it.

As far as I am concerned - as either an Amateur or Neighbor - there is a failure in the system. I can see why this law has to come into effect, for the sake of peace with people that don't want our noise in their "pleasure and private" world.

Listening to that darn repeater is an embarassment to the entire community that is in it's reception range. I wish it would get cleaned up. Thats why a few threads ago, I made the comment about off-duty officers that listen to the garbage on that repeater. They slammed me for even being "A Ham that hangs out with that crowd."

I didn't back then, I don't now. I believe that many of those "Hammies" finally graduated to Extras and are the "truckers" causing that interference you think are CB'ers. They're quite versatile, and can make it difficult for anyone either on simplex, DTMF, Tone PL squelch, or offets, to maintain a QSO.

They did it on 2M, 6M and 10M - I hope you aren't one of them. Amateur life has a lot of deception and surveliance, to the point of paranoia at times, to it, and I'm not kidding.

After that comedic meeting with those officers, down went that antenna real quick. The ADI makes a nice paperweight for my bench. Ocassionally I pull it out to listen to weather. That is about all it's good for now...Thank you for sharing the below. It not only consolidates my opinion, it confirms it.

<chuckle> You guys have got a lot to fix, have fun!

On Wed, 29 Nov 2000 18:07:29 -0500, while the modem was pondering it's navel, Jerry Oxendine <joxendi@bellsouth.net> dissertated the following:

7315. Re: CB crackdown issue

Newsgroup: rec.radio.cb
Date: 2000-11-30 00:00:00 UTC
From: JAMES HAMPTON <j.r.hampton@worldnet.att.net>
Message-ID: <nPtV5.3602$0r2.199928@bgtnsc07-news.ops.worldnet.att.net>
Source record: 61188

Wasn't meant the way you took it. Rather, it was to inform you as to the situation. Had the station asked me to QSY (remember, I asked if the frequency was in use - no response), there would have been no problem. I believe had I called CQ DX there would have been no problem. Instead, he stated there was an important DX contest going on and to take my phone patch traffic to the other end of the band. Of course ham radio is a LOT more than 14.313, or 75 phone - I happen to enjoy 440 MHz and have a bunch of friends there. Just because I hold the extra class ticket - and so does a very good friend who owns one of the repeaters, Tim, WB2KAO, does not mean we HAVE to operate there (although he does, on occasion, usually he is on his repeater). Sure, there may be some rudeness on CB - but please don't tell me there is none on amateur radio. I would not base my feelings on the one or two instances. While I agree those instances are fairly seldom (I won't go into Mike, W2OY), please bear in mind that there are good operators as well as lids both in amateur radio and CB radio. It doesn't help anyone to come into the CB ngs with an attitude likely to turn people off. Regardless of what you or I may think, these folks are radio enthusiasts and a fair number are technically knowlegeable. I think my biggest gripe is with the stations, both amateur and CB, who have the attitude "my signal is the biggest and baddest and I own the airwaves". Those folks exist in both services and methinks that awards such as the DXCC probably cause more problems than the few people they satisfy with even more 'wallpaper'. Once again, the war issue was to make a point that there are some hams that just couldn't care less. I hope you aren't one of them.

Thanks and 73s from Rochester, NY
Jim

Can you believe this is the same guy who, in another thread, claims to have 'offered help' to people to become a ham and (I wonder why) no one took him up on the offer! I am having problems figuring out why some hams come into the CB ngs, spew their venom, and then have the audacity to wonder why people neither want their help nor appreciate their 'knowlege'. Excuse me please, I've gotta find a barf bag.

Greetings!

As a help, if she's not going to talk on it much, a simple Cobra base radio can do just fine. But, when looking for the right one, you might want to get her a radio with not only Squelch, but an RF gain control that can help her turn down the noise when she needs some quiet time.

You might need to "tweak" the coarse Squelch control trim pot inside before you give it to her. Sometimes any radio can't hear someone in the driveway due to the squelch control too far up and the RF gain control fully down [no gain/signal].

You can get AM-only [mode of operation simple AM radio] ones out on the net pretty cheap. The only thing that might cost you is an antenna for it. Inside types, that are self-supporting floor models, can get expensive, but can be hidden behind a Torchier and table in a quick fix if she's not going to transmit/talk on it too much.

On Wed, 29 Nov 2000 23:56:50 -0500, while the modem was pondering it's navel, "Scott (Unit 69 Chesapeake Bay)" <upplus@hotmail.com> dissertated the following:

>
>The above is wrong. ARRL does NOT license anybody. All licensed civil-

Your wrong and playing with semantics. The ARRL is solely responsible
for licensing of HAMs. Without approval of the ARRL, the FCC would not
issue the license. The FCC is no more than an escrow agent in this
case.

The ARRL has no right to be a governing body of free people as it is
never open to free elections from all of the people of the USA.
Furthermore, it doesn't pay for the bands the FCC assigns to the ARRL.
Therefore, the ARRL has no rights to determine what governing rules
they can force on me and everyone else.

Don't get mad as this is the basis of my viewpoint on most things as I
believe in the Libertarian principle. And judging by how much illegal
traffic as defined by the ARRL, there are many more libertarians than
just me.

hi andy, it is 100% correct. the callsign i use on the air is KiloPapa82. nothing else therefore i sign my emails with nothing else. i belong to more groups the Just Knight Patrol and Lima Delta but have made the choice and commitment to be 100% Kp since it is a group that holds the same values dear that i do regarding the $ collectors and dollar senders like yourself. i was made a honorary member of LD by the president and accepted full well by the vice presidents while they knew i would not be using the call much if ever on the air. surely if every official in the group has no problem with this you would not either but if you do perhaps the AT group would be better suited to your needs since they have silly rules where there members can only use there AT callsign and they have the stuffed shirt mentality that you display so readily here on this news group.. oh never mind, you probably dont have enough dxcc confirmed to be AT or you already would be.

Well, Gary, these arguments will probably go on for more than a hundred years and by then, I won't care. My concern has been some of the remarks that hams have made in the CB ngs. I've had arguments over morse code (I really don't care) - with one guy telling us it was absolutely essential (on 440 FM, no less!). Fortunately the repeater owner was on so I asked for and got permission to make the guy happy - and switched to about 40 WPM F2 emission! That is fine. A couple of guys arguing on the ham ngs over ham regs is fine too (although I've been getting tired of a couple of threads there) - but when guys come into the CB ngs with 'ideas' about the proper liquid to fill a dummy load (read that thread!) and then in another thread wonder why no one takes them up on their offer to help CBers become hams! Am I missing something? We are all guests here, and my feeling is that if hams want to stop by and make an intelligent comment, fine. If all they want to do is cause hate and discontent, that is something else. I've found a couple of real nice boards - they got that way when the board owners started ISP banning - and started banning the few guys that kept comming in and quoting FCC regs (say what you may, those posts were meant as a flame). I just don't understand how posting rules and regs and 'talking down' to the CB community (and some of these folks ARE technically knowlegable, regardless of what others may think) can help amateur radio. If some of the CBers seem a bit 'free-wheeling', maybe amateur radio needs to attract a few people who actually have lives. None of this is meant as a flame, I'm simply pointing out that guests in another's house should try and be at least civil.

Thanks and 73s from Rochester, NY
Jim

Should I dunk my hand in the oil to feel the resistors?!?! <g>

In free air it handles a 10 watt dead key. It doesn't get hot
enough to burn my hand. The oil should transfer the heat away,
but in a sealed one gallon bucket, it's kind of hard to tell
when "it gets too hot".

Since it is agreed that transformer oil is over kill, should I
use 10W30 or Dexron II? I have a case of motor oil on the porch.

First of all, You Sir are a prime example of why I would'nt become a Ham if my life depended on it, the Country depended on it, and God himself depended on it. Your feeble attempt to belittle me by pointing out a word that is misspelled, just shows the typical &#65533;holier than thou &#65533; attitude, of your average Ham operator. Notice I said average ham there are others in this forum and have followed this post that are ham operators that do not portray this attitude. You sir are just insulted because you came to this Forum Rec.Radio.Cb . and offered your &#65533;services&#65533; to assist the lowly Cber in becoming a ham operator and did not receive one single e-mail. This is a CB forum, why do you troll here anyway? Could it be that you cannot or do not feel as high and mighty with your fellow hams? Have a good day !

MR.PAIN&#65533;

7332. e-bay vs yahoo

Newsgroup: rec.radio.cb
Date: 2000-11-30 00:00:00 UTC
From: jojo <maranatha@mediaone.net>
Message-ID: <DHvV5.29820$M51.10147846@typhoon.ne.mediaone.net>
Source record: 61255

Hello everyone, I just had an auction booted because e-bay has let the FCC take control of what is to be sold for radios etc. so if anyone is interested yahoo auctions donot have the FCC involved yet.

Message-ID: <01c05af2$2264f100$82878685@clip>
Source record: 61258

Wonder what would happen if all the cb'ers you know
signed a petition and submitted it through proper
channels, ie. state lawmaker type guy, to the FCC
to abolish the code requirement and make the ham
test a simple, plain english common sense type test
that anyone who cared to take could pass?
I'm bettin' that it would get someones attention. If
we made enough noise about it, we could all be
on the ham bands legally swapping stories on health
and weather conditions, and telling each other how
great our rigs are!
The Phoneman

7336. Re: HR2346 : hams beware

Newsgroup: rec.radio.cb
Date: 2000-11-30 00:00:00 UTC
From: Fred Hambrecht <Fred@w4jle.com>
Message-ID: <9062mv$276$1@iac5.navix.net>
Source record: 61259

Thank you for your kind reply Mr. Wild Bill

This is one of the reasons I was asked to get involved. The town has to write a set of laws that address "real law breakers". As a member of an interference committee, we need to protect not only Hams, but legally operating CBers as well. I am educating them on part 15 devices that have no immunity, and pointing out that the devices themselves can create interference to legally operating radios.

To get to the point, no Ham or Cop should bother any radio operator operating within FCC regulations. That being said, I will tell you that I have no problems with a CLEAN station run by any CBer. I know that in the area I live in sometimes it is necessary to stretch the power limits to reach the house from town. That being said, an overmodulated, splattering station that has cut the modulation diodes and covering 5 channels either side of the one they are on is a problem, even if running legal power.

Those that participate in the "superbowl" type operation should be the first to be looking over their shoulder. Let's face it, the way you clean up anything is to first take down the "Big Guns" and the intelligent folks get the word.

My personal view is to apply common sense to the problem. The process we are following is that in most cases the interference committee folks will be called in to arbitrate and assist in a solution, This may be telling the "little old lady" she needs to replace her 1954 Muntz TV. The interference committee may be your best friend.

If one is an outlaw, "nobody is telling me what to do" type, I suggest they start building up a legal defense fund. What also appears to be a real concern to local officials is language that has been deemed by the FCC as profane. We have a problem with truckers coming through town and using the filthiest language. Telling a local church going lady to go F%&* herself will probably be treated more seriously than a linear. The little old lady votes here...

I haven't researched it but it seems there's a lot more "Silent Keys" than
new hams coming in. I'm sure this will change soon because of the relaxing
of the requirements of membership.

> issue the license. The FCC is no more than an escrow agent in this
> case.

It sure looks like you've got the ARRL VE system (the folks who give exams and issue certificates) confused with the ACTUAL licensing authority, the FCC. The ARRL is ONLY involved to the extent that their Volunteer Examiners can give FCC exams (note the 'FCC'... they're NOT ARRL exams) as are several other VE groups (W5YI for one, but there's about 6 of 'em). The Volunteer Examiner Groups, whether ARRL or one of the others, have NO authority to issue any level of license...

VE's only do the paperwork end of validating applicants, much like a new car dealer does for a customer.... and JUST LIKE the dealer, they cannot issue the actual license... that's left to the proper authority (in MI, it's the Sec. of State's office). The ARRL is only a 'not-for-profit' middleman, like W5YI and the other VE groups.

> Furthermore, it (the ARRL) doesn't pay for the bands the FCC assigns to it.

...More confusion!! The only 'band' thing the ARRL has is a "Band Plan"..... they are assigned NO bands. The Band Plans are nothing more than 'gentlemans agreements' on what modes get used where on each band... a common sense kinda' thing that has it's basis in FCC rules and regs, but has NO LEGAL standing in and of itself.

> Don't get mad as this is the basis of my viewpoint on most things as I
> believe in the Libertarian principle.

Does 'Libertarian' also mean you don't have to aquiant yourself with the facts before making wild accusations?

The world's first fully computerized airliner was ready for
its maiden flight without pilots or crew. The plane taxied to
the loading area automatically, its doors opened
automatically, the steps came out automatically. The
passengers boarded the plane and took their seats.
The steps retreated automatically, the doors closed,
and the airplane taxied toward the runway.
"Good afternoon, ladies and gentlemen," a voice
intoned. "Welcome to the debut of the world's first fully
computerized airliner. Everything on this aircraft is run
electronically. Just sit back and relax. Nothing can go
wrong ... Nothing can go wrong...nothing can go wrong...."

7352. Clinton Signs Bill on Illegal CB's

Newsgroup: rec.radio.cb
Date: 2000-11-30 00:00:00 UTC
From: tomtexan@aol.comode
Message-ID: <20001130125847.21591.00002644@ng-fe1.aol.com>
Source record: 61275

Wednesday November 22 2:43 PM ET
Clinton Signs Bill on Illegal CBs

WASHINGTON (AP) - State and local officials could crack down on unauthorized citizens band radios that interfere with consumer televisions, radios and cordless telephones, under legislation signed Wednesday by President Clinton (news - web sites).

The measure allows state and local governments to enact and enforce regulations that prohibit people from using unauthorized CB radio equipment, such as those that operate in excess of permitted power levels.

Existing law permits only the Federal Communications Commission (news - web sites) to pursue complaints of interference on the airwaves caused by radio equipment. But the agency does not always have the resources or field agents to investigate and act on every complaint, according to supporters of the legislation.

The House passed a final version of the bill last week.

-

On the Net: Information on the bill, H.R. 2346, can be found at http://thomas.loc.gov/

Chicken Coop

A little boy and a little girl go every day to play in a chicken coop. One day the little girl comes up to the little boy and says, "We can't play in the chicken coop anymore."
The little boy asks, "Why not?"
The little girl answers, "'Cause I'm growing feathers."
The little boy stares at her in disbelief and says, "No way. Show me."
So she pulls down her pants. He thinks about it for a little while and decides it's not that big of a deal, so they both decide to continue playing in the chicken coop.
A few weeks later the little boy comes up to the little girl and says, "We can't play in the chicken coop anymore."
"Why not?" she asks.
"'Cause," he says, "I'm growing feathers, too."
She looks at him in disbelief and says, "No way. Show me!"
So he pulls down his pants. The little girl's eyes widen, and she says, "You're not just growing feathers, you're also growing a neck and a gizzard!"

An Arab was walking through the Sahara desert, desperate for water, when he saw something far off in the distance. Hoping to find water, he walked towards the image, only to find a little old Jewish man sitting at a card table with a bunch of neckties laid out on it.

The Arab asked, "Please, I'm dying of thirst, can I have some water?"

The man replied, "I don't have any water, but why don't you buy a tie? Here's one that goes nicely with
your robes."

The Arab shouted, "I don't want a tie, you idiot, I need water!"

"Ok, don't buy a tie. But to show you what a nice guy I am, I'll tell you that over that hill there, about 4 miles, is a nice restaurant. Walk that way, they'll give you all the water you want."

The Arab thanked him and walked away towards the
hill and eventually disappeared. Three hours later the Arab came crawling back to where the man was sitting behind his card table.

The man said, "I told you, about 4 miles over that hill. Couldn't you find it?"

The Arab rasped, "I found it all right. They wouldn't let me in without a tie."

Santa Is Quitting His Job

T'was the night before Christmas--
Old Santa was pissed.
He cussed out the elves and threw down his list.
Miserable little brats, ungrateful little jerks,
I have a good mind to scrap the whole works!

I've busted my ass for damn near a year,
Instead of "Thanks Santa"--what do I hear?
The old lady bitches cause I work late at night,
The elves want more money--The reindeer all fight.

Rudolph got drunk and goosed all the maids,
Donner is pregnant and Vixen has AIDS.
And just when I thought that things would get better,
Those assholes from the IRS sent me a letter.
They say I owe taxes--if that ain't damn funny,
Who the hell ever sent Santa Claus any money?

And the kids these days--they all are the pits,
They want the impossible--Those mean little shits.
I spent a whole year making wagons and sleds,
Assembling dolls...Their arms, legs and heads.
I made a ton of yo yo's--NO request for them,
They want computers and robots..they think I'm IBM!

Flying through the air...dodging the trees,
Falling down chimneys and skinning my knees.
I'm quitting this job..there's just no enjoyment,
I'll sit on my fat ass and draw unemployment.

There's no Christmas this year,
now you know the reason,
I found me a blonde,
I'm going SOUTH for the season!

NYER ON AN INTERVIEW

A construction site boss was interviewing men for a job,ï¿½
ï¿½ when along came a New Yorker.
"I'm not hiring any wise-ass New Yorker," the foreman thought to himself,
so he made up aï¿½test hoping that the New Yorker wouldn't be able to answerï¿½ ï¿½

ï¿½ the questions, and he'd be able to refuse him the job without getting into an
argument.ï¿½ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½
ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½ ï¿½

ï¿½ The boss scratches his head and says,
"How on earth do you get that to represent 99?"ï¿½ ï¿½ ï¿½

Ratman,
You have a lot of options here. If your aunt isn't going to
transmit, almost any 'base' radio will work fine for listening.
As for an antenna, a simple wire run out of a window and thrown
up on the roof will work too. Just plug it into the center of
the antenna connector. That's about as simple and easy as you
can get...
'Doc

Nothing would happen...The FCC did not set the Morse code requirement. It was established by the ITU, an international organization. The FCC has no power, by international agreement, to abolish the 5WPM code requirement.

Yep doc, you're a regular rocket scientist. I thought I
was the only one working at NASA. I'm envious of all
the 'ol timers, and their younger snotty counterparts
up there on the high and mighty ham bands talking
where I'm not allowed. Yea right.
I also enjoy listening to their sniveling about my prices
when they bring their "rigs" in to have them fixed after
they get done working on them. Darn things just aren't
as easy to fix as they were back in "the good old days
when we had tubes" thay say. Guess I shouldn't complain
about that though... it's good money. Hammers bitch twice as
much as CB'ers about what it costs to fix their unit, and
the sad part is they usually have more money to blow.
They also bitch about the illegal use of CB and CB'ers on
their bands, but I never hear the CB'ers say one word about
the ham operators, and I have at least 100+ go thru the
shop in an eight hour day.
The Phoneman

I dont see why it is troubling to you. I accept it because it is something that is needed and something that ought to happen, in my opinion.
Anyone who supports or opposes the measure can write his congressman and tell them.
I cannot speak for other amateurs, but those of us who operate courteously and legally will not be hurt by this law.
Someone show me how I will be negatively impacted by this situation and I would oppose it. As far as I can see the illegal and the inconsiderate will be punished, no one else. All the "what if this and what if that" rhetoric on this NG is basically people who want to break the law hollering about the injustice of the law being enforced. Too bad. Period.

People ask why I am on here if I'm a ham...

Well, I posted in the first place because I find it disgusting that so many people on this NG think they have a right to cause RFI and offend the general public and act pissed because the new law might make 'em stop.

I really do not give much of a rat's ass what the illegal operators think about my posts. If they offend you then exclude me from your viewer.

I see a bunch of crybabies on here. Period.

7378. Speech Processor Update...

Newsgroup: rec.radio.cb
Date: 2000-11-30 00:00:00 UTC
From: Professor <bgriffey@kwom.com>
Message-ID: <906aqe$ja5$1@nnrp1.deja.com>
Source record: 61301

So far I'm very pleased at the speech processor's performance. The modulation is good and loud without any background sound whatsoever. It makes it sound like you're talking in from a very quiet room... with no room echo. This definitely helps readability, by raising the signal/noise ratio. Several people have asked where my base station was (hehehe)... and several others were ripping me for having a "big radio". I was only running 5W from the mobile!

BS! The feds can and do change positions all the time..IE:.,,The telephone monopoly breakup of AT&T, ..to cite just one example. The international agreement of 5 wpm is just that, an agreement. The feds do not have to follow it if they do not wish. We (the US) can and do change the law worldwide whenever it suits our purpose or needs. But, you can relax 'cause the 5 words will be around for a few more years,,,before they bury it for good!

>what will you do if your ordered by local police to shut down your legal
>radio
>station because its causing interference???

It won't happen...Licensed, legally operating amateurs are exempt from this law. In fact most consumer electronic<TV's VCR's, etc> equipment has some kind of warning attached to it that says not only is it not permitted to cause harmful interference to other services, but that it must also accept any interference another service causes it.
So anyone squawking at me about a my legal amateur equipment messing up their cordless phone is not given remedy through the law. However, If I was interfering with someone and knew it, I would make an effort to help them. I had a pretty good 2 meter and 6 meter SSB setup in Chicago before I moved from there...Had a neighbor with a VCR that got QRM'ed BAD from my setup. I grounded his VCR and placed ferrite chokes on the input, output, and 110V leads...problem solved.
The average ham is not the problem. Illegal operators, whether hams or CB'ers are. All the bitching on here is just smoke and mirrors to cover up that fact.

Handy Andy,

As to the above, I totally agree. The smug remarks made are totally un-called for and counterproductive. We should be trying to get along, and recognize that BOTH CB and ham have their places.

>

>

>

Not sure, but since I haven't run into much trouble on VHF, I can't comment there. I CAN confirm that it is truckers on 28.085 simply by the gist of the conversations (destinations, loads, gripes about employ-ers, etc.) and the noise toys such as R-beeps and echo. And many hams ARE attempting to discourage this by running CW right on top of them. If that sounds like I'm being a a-h***, I can't help it. The hams are legal there, the truckers aren't, so they run right over them. LOL! You can't "interfere" with an illegal station since he nas no rights in such a case. Incidentally, I run my station completely legally. I don't even own an amp (except in the car--mostly for 40 meter AM on 7.295.
>
> They did it on 2M, 6M and 10M - I hope you aren't one of them. Amateur
> life has a lot of deception and surveliance, to the point of paranoia
> at times, to it, and I'm not kidding.

I can't speak about "paranoia", but the privilege of having a license does carry responsibility for conducting oneself in a mature, profes-sional manner. Because ham radio is an intentionally international avo-cation, we have stricter rules than CB. Anyone can be listening, there-fore, there is much more monitoring of behavior and operating practices. It IS true that some choose to shame the service with their immature,

even infantile behaviors. They are in the minority, and are slowly being dealt with. When I hear such goings-on, I just turn the dial and find an interesting, informative QSO, or start one.

Thanks for the discussion and 73

Hey

I have the following forsale:

1.) Johnson Messenger 100 - Has A,B,C,D,E channels on it, but you have to put crystals in them. It has the mic. I don't know if it works, because of no power cord.

2.) Johnson Messenger III - Has the mic, Has A,B,C,D,E,F,G,H,I,J,K.L channels on it (has to have crystals), I don't know if it works, because it also doesn't have a power cord.

3.) Johnson Messenger 110 - No mic- No power cord, I don't know if it works. Has A,B,C,D,E channels(has to have crystals).

4.) Jonhson Whiteface Base Station - Has mic, but no power cord. Has a channel 9 crystals in it. 5 channel radio

5.) Johnson Blackface Base Station - No mic, no power cord. has no crystals. 10 channel radio.

Johnson 100- $5
Johnson 110- $5
Johnson 3 - $5
Johnson Whiteface - $25
Johnson Blackface - $25

Email me know if your interested, I will sell them separate or as a whole group. Thanks

North GA. Buckaroo "223"

I am not trying to do anything but present an opinion in a logical fashion. You just do not agree with it. I did not make the law, I did not even know it was in the works. I do support it.

This is too simple, fellas...It is a law. It helps to protect the public good.

You can get an amateur license and run 1500 watts on any band you are licensed for. That is the provision that is made for radio enthusiasts.

Everything you have said about "what if this, what if that" is based on the idea that
hams are included in this law. That is an incorrect supposition. A legally operating amateur station is exempt. Therefore, your arguement is invalid.

You may insult me or anyone else who thinks like me 'til the cows come home, it won't change the truth. If you are operating a legal radio on a legal band, with an amateur license or in the 40 CB channels, you are exempt from this law. Period.

From where I sit all the opposing arguements to my opinion seem to ignore this fact.

7396. ARRL News RE:illegal CB BILL

Newsgroup: rec.radio.cb
Date: 2000-11-30 00:00:00 UTC
From: n8wwm@aol.com
Message-ID: <20001130152638.09343.00001725@ng-cf1.aol.com>
Source record: 61319

President Signs CB Enforcement Bill
NEWINGTON, CT, Nov 29, 2000--President Bill Clinton has signed legislation that permits the enforcement of certain FCC Citizens Band regulations by state and local governments. Amateur Radio operators are exempt from the provisions of the law, now PL 106-521.
^^^

maintained that the local hams asked him to support the bill because of the bad rap they were getting from illegal CBers using high-power linear amplifiers that resulted in TV and telephone interference while the CBers involved hid behind federal preemption.

Ehlers says that when he was contacted initially by a frustrated constituent who had been experiencing TV, radio and cordless telephone interference, he thought the problem was an isolated incident. The CBer in question was using an illegal 100-W amplifier, he said, and the FCC told his constituent that it did not have the personnel to enforce CB lawbreakers around the country. Ehlers says he introduced his bill as a result.

> You are quite funny with your mistaken beliefs about who is the lic-
ensing authority for ALL radio services in the USA. I defy you to find
ANY reference to ARRL on my license or any other. While I generally
support *most* of ARRL's incentives and efforts on behalf of Amateur
Radio, I am not now, nor have been a member of ARRL. I do think I know
where you got that mistaken idea. You see, ARRL does sponsor Volunteer
Exams and Examiners to administer tests. These Volunteer Examiners
give tests, process the paperwork, and send it on to FCC which issues
licenses based upon test results. BUT. They are NOT the only groups
that do this. Local ham radio clubs, not necessarily affiliated with
ARRL, ALSO administer exams in the same manner. The FCC is the SOLE
authority on license grants in this country. I suggest you read the
Communications Act of 1934 which created FCC and charged it with this
responsibility.
> Your wrong and playing with semantics. The ARRL is solely responsible
> for licensing of HAMs. Without approval of the ARRL, the FCC would not
> issue the license. The FCC is no more than an escrow agent in this
> case.

The above is BULLCRAP! Again, ANY club which is able to have certified
Volunteer Examiners may adminsiter exams. Period.
>
> The ARRL has no right to be a governing body of free people as it is
> never open to free elections from all of the people of the USA.
> Furthermore, it doesn't pay for the bands the FCC assigns to the ARRL.
> Therefore, the ARRL has no rights to determine what governing rules
> they can force on me and everyone else.

The ARRL is NOT a governing body of ANYTHING. It is an affiliatory or-
ganization which seeks to enfluence policy, law, and regulations in a
manner favorable to Amateur Radio. Any ham can join this organization

by paying the annual dues just as a CBer may join a local CB club or an international Sideband club. Where in the world did you get the idea that ARRL has bandwidth? That is pitiful and shows the conmplete lack of understanding of US communications law which you have. Bandwidth for hams is determined by INTERNATIONAL treaties to which the USA is signatory. Every few years, the cooperating countries meet and hash out issues, re-allocate bands (40 meters is on the agenda as well as the CW requirement) and discuss, not only ham radio, but other radio services as well. I don't know how to make it any plainer: ARRL is NOT a regulatory agency, nor does it, in and of itself, have "bandwidth". That is a fact!

Payment for bandwidth which is an issue for you: Cell companies are for-profit coroporations. The rules that govern such things as Common Carrier, Transportation, Aviation are different than for ham radio. Under the rules that govern said profit making companies, FCC is allowed to "auction" spectrum to various entities that fall under these rules. Ham radio is NOT for profit. Yet, ham radio "pays" for the spectrum it uses with its long-standing, proven, and effective service in time of local need, or national emergency. Time and time again, it is ham radio that fills the gap when other services, such as the cell phones you mention, are rendered useless by fire, flood, or other calamity. It is recognized, like it or not, as a national asset. Therefore, the Amateur Service will not be "paying" for bandwidth in cash--it already does so in it's service to the world and nation.

Enforcement: ARRL doesn't determine the rules by which anyone operates. That, sir, is still the purvey of the FCC. And any assertations to the contrary are just plain WRONG! When a violation occurs, it is NOT ARRL "agents" that come knocking, they are Federal Communications Commission agents. Read the name: ARRL= Amateur Radio Relay League. League means affiliation, made up of members who subscribe to the policies and objectives of said organization. GET it?

And I hope YOU don't get mad at me. But I am right, YOU are the one who has bad impressions and bogus information. I invite you to visit the FCC website, obtain pertinent documents as to US communications law, and become informed as to how said law really works. Visit the ARRL website and read what it is actually for.

And with that, I'm outta here!

Best 73

Jerry

I would disagree with the position that the feds can do anything they wish. We have international agreements simply to attempt to maintain some sense of order on the air. Why do we have traffic laws? If we didn't what happens if a tractor trailer is comming towards you on a two lane road - and he wants his half out of the middle? The simple fact is that our AM broadcast stations might decide that 5 or 6 MHz (or 20 or 27(!)) might allow them a greater range. Your local neighbor may want to be a dj - and set up his operation on your favorite local FM station! In fact, I think that some of the 'underground' FM stations may have had more to do with the recent relegation of unlicensed stations to local authority than many may realise. There are also problems with LANs operating in the 900 MHz region. Now we have some LANs operating somewhere in the 3 MHz region. This is a case where some regulation HAS to be agreed upon and maintained, even if some of us disagree with it.

I don't know. This should be common sense. I've worked on plenty of surface mount rigs - worked on rigs from 1520 KHz to over 900 MHz including broadcast AM and FM stations. The big deal is NOT to try and work on it without the proper test equipment (and certainly not if you do not possess the proper knowlege). Also, if not intimately familiar with the gear, you SHOULD have a schematic. You won't hear me whining. Yes, I fix my PC, my radios, appliances - not televisions though, they are essentially 'throw away'.

No filter caps?.....No circuit board?.......... No
regulator?.........Just a toroid type transformer and two
chassis mounted diodes?

With the type of supply it is normal to read 20 volts or so without
a load on the supply. It is not a proper power supply for your
application.. You have a battery charger that has no regulation or
filtering because it doesn't need it for that purpose.

For your application you can get away with no regulation,
however you still need filter caps. With this configuration
you might get away with running the amp for a while. It does
however sound like you are overtaxing the supply.

The solution if you want to run this supply is to keep the
filter caps and then add a cheap form of regulation. Parallel
a 5 or 6 ohm resister at the output. The resister should be
a minimum of 40 watts. This should lower the no load voltage
to somewhere around 15 or 16 volts.

Doc,

I don't know what there is to be envious of. There is one code free test, and all of the others are in plain English, quite easy, and require only 5 WPM morse. I was off the air in 1970 and dropped my tickets. I decided to get back on in 1993 and when I called, I found out the test was at 7:00 PM THAT EVENING. I went in cold turkey with no study and no morse code since 1969 - and passed. Sure, I made some mistakes - I guessed 40 meters went to 7.5 MHz and I didn't want to extract square roots by hand (didn't bring a calculator and lost my slipstick 30 years ago) so just checked off some answers on resonant frequency, but there were plenty of simple questions which allowed me to pass - you don't need 100%, after all.

Or you could just rebuild the regulator circuitry in the supply. use a LM7812 3 terminal regulator, 2N3055 pass transistors, and 2 diodes in series to the ouput lead of the regulator to bring the regulator output to 13.4 volts.

Schematic diagrams of such are available in the ARRL handbook.

(Editorial content snipped.)

Bullshit. The ARRL is one of several VECs. The licensing standards are FCC written or approved. The governing board has one, count em one, rep from ARRL of I believe five. Last I looked, it was chaired by W5YI who runs a completely separate VEC. The Commission sorts out complaints and frequently orders retests at FCC offices. The Commission has delegated the grunt work in both the Amateur and Commercial (GROL) areas and requires the applicant for a Broadcast license to do the grunt work for them. There is nothing unusual in Amateur practice. They retain the final authority and responsibility.

I guess the above depends strictly on one's point of view, and whatever it is he wants to do that may be contrary to a law that applies. IMHO, the laws that apply to communications are as reasonable as they *can* be and still accomodate the largest number of people. In the case of restrictions on language, I think they are reasonable. I certainly wouldn't want my children subjected to grossly indecent and vile words on TV, for example, and the restrictions that apply to other radio services are there because it can be heard by anyone. Surely, everybody doesn't feel that way because they *use* such filthy words and suggestive phrases, but that doesn't make it right.

We *all* often wish there weren't restrictions on our words and behavior at all, but if that were true, we wouldn't have a civilized society at all. The Second Amendment, acording to Supreme Court rulings, doesn't give unabridged rights to say anything we want to, and we have all heard the old example of yelling "FIRE!" in a theatre. The reasons for that are obvious.

If we are talking about laws and regulations that govern our activities on the radio, the same principle applies. The laws that exist, altho not perfect for everbody, do give the maximum use of the most radio spectrum for the most people. Truly, that doesn't suit all. I can't help but wonder if those that chafe the most under the laws are those that really want to be able to use a radio anywhere, any band, any power, without regard to others rights (except them) or necessary comms for commerce and safety. FCC isn't all to blame for the "imperfect" laws, for the agency arose from an act passed by Congress whom we elected to try to govern and provide for the good and well-being of all. But they can neither catch all the "fish", nor satisfy every single constituent.

Just a question. If we didn't have FCC, what would you replace it with? If it were another agency, what would you change? It's a tough job, but somebody's gotta do it. LOL!

Radio Shack already sells exactly that for mobile use.

The entire unit is in a mag mount with an antenna on the
top. The cable comes down into the car to a 'control
head' and also picks up power.

I suspect car to car it will work DAMN good!

It doesn't even say that!!

This bill does ABSOLUTELY NOTHING to change the
law or the enforcement by the feds.

What this law does is ALLOW states to pass laws. And
it defines how those laws MUST be in compliance with the
feds.

PRIOR to this law, the FED reserved full rights to enforce
CB. All this law does is allow states to pass the SAME or
LESS RESTRICTIVE laws for local enforcement. They
CANNOT pass MORE RESTRICTIVE laws.

N8wwm,
The law says 'unlicensed' operators are affected by this bill,
licensed operators are not. Of course the ARRL would word their
announcement to cover hams, that's who they represent. What else
would you expect? There's nothing sinister about it.
And, if an amateur is operating on the CB frequencies, or the
so called 'freeband' frequencies, he is ~not~ exempt because he
holds an FCC license.
If your going to tell it, tell it right.
'Doc

You have many a valid points, Jim. However, true radio pirates use very little power, on FM, as little as a half watt. More interested in quality than quantity. A little wattage on the salt H^20 goes a long way, long way, so I would disagree that the majority of true, pirate broadcasters running real stations with music and commentary would be at the core of the problem. Also, the real pirates that want to cater to the masses run on your everyday FM receiver dial, anywhere from 87 to 108 and a few on the fringe.

Good thought provocative post, Jerry. I dunno. As you know, I feel if the hammies are not bothered by cbers, they have no reason to bitch about freebanders. Vice-versa as well. I don't want my kids exposed to such type media, it's MY job to keep them away, not yours, not his or hers, but MINE alone. If I cannot accomplish that direction, it is my own fault, no others. Replace the FCC with? Shouldn't be any enforcement on public airways, as far as content. Power, bleed, blasting over other services, ok, but content, no. MHO, of course.

The town was (I may butcher the spelling here) Ludowicki
GA. The head cop there was more like the Bufford T Justice
than Jackie Gleason was. I actually saw him in the early 60's,
with about 10 or so cars lined up on the side of the road
(before the interstate) smoking one of those cigars that looked
like a small baseball bat, one foot on the bumper of a
'Yankee caw' writing a ticket.

And there was a billboard... It said not to stop for ANY
reason in the town, and had a GA State Trooper parked
under it. I guess to keep the sign from being vandalized.

Evidently the town got a real bad rep for water in gas tanks
at gas stations, cars getting flats at the diners, and speed
traps.

This is the same moron mentality that screwed up 11 meters. If a legal FRS radio doesn't meet your needs for what you want to do then maybe you should consider buying a radio and antenna that can do the job legally. By the time you finish messing with your radio, putting up a mast, cabling and antenna you could have a decent rig that does a good job. Sounds like you need to step up to the GMRS level and put the kiddie toys away.

Hell, I'd like to see CB licenses again, and the fees could be used
to go after the bad ones. I stay off AM unless I'm on the highway or
need some entertainment.

What would the wattage limit? A 2 pill or a 4/5 pill?

Limiting any additional frequencies to SSB would be good.

How about allowing FM on some frequencies?

My impressions are that it is a twofold process. First, In Georgia they passed a law limiting the percentage of revenue that can be obtained from traffic tickets. 85% of most small town budgets were derived from ticket revenue. This is a new source of revenue. Second, like every place in the US we have a couple of folks running lots of power and screwing up the neighbors TV sets etc and laughed about it knowing the locals could do nothing and the FCC was too busy. This coupled with truckers splattering over to Chan 23 (the local gab channel) with horrible language that upsets the local church ladies.

My efforts have been to moderate some of the really upset folks. I am trying to get them to first pass interference problems to an interference committee and if no cooperation is obtained (you have seen it on here "nobody's gonna tell me...) police action will follow. I have a concern for the CBers that are running clean stations and are causing interference to Aunt Martha's 1954 Muntz TV and yet are totally legal. I personally work with any radio operator to get the problems solved. On the other hand if I run into a "harda**" with a hat full of attitude, they can fight their own battles. We have had interference committees for a lot of years in ham radio. I expect that it is time either CBers form their own, or take advantage of the Ham groups in the area. Both groups pulling on the oars together may get this boat pointed in the right direction. I suspect most CBers will welcome the help, unlike a few on here that delight in derogatory remarks towards legal CBers and hams.

Scott,
I think you got it right when you called it a 'troll'.
I can't speak for all of them, but I know one ham who
does NOT want 11 meters as a ham band.
'Doc

May I second the emotion??? I can't even think of a bad reason to want 11 meters back.

Thanks HA. Much nicer than saying stupid question. I will have the sams hopefully tonight so I have a map to work with. It was a lot of fun finding that shorted cap. I had to pull jumpers at various points to see if the short was coming from various sections and finally isolating to the section with the cap. This may not seem like much a radio but I'm Class A golden screwdriver technician and it was a major feat. Thanks for the info.

Greetings!

What does the RX meter say? If it's working good, check the IF section from the detector diode down to the volume control and the input caps on the audio amp chip too.

More than likely you have a shorted cap or a failed diode on the RX line too. It's not uncommon to find a TX cap shorted. In doing the repair, you need to verify RX voltage to the receive side.

Using a dummy load, key the radio up and check/verify that RX side does turn off, or if you get 2.3 volts around the RF amp sections.

In rare circumstances, the RF gain pot could fail causing the RX voltage not appearing on the RF amp IF mixer - but the cap on the RF gain adj. line could be shorted causing the pot to fail.

As a quick check, see if you get the IF "hiss" that is present, like snow and the hiss on a TV - it would be a good clue that helps elimiate a section of the RX that is getting voltage, just nothing is getting to it from the RF receive.

Check the ANL section, and the NB section - for shorted caps. Especially the ANL section, a cap of about 1uF 50V is wired backwards, positive side to foil ground and is normal. If this shorted, it can cause reduced audio. [see above]

Did you check for a shorted cap on the audio output line? There is a ballast resistor for the speaker - check to see if it's within it's value.

Some people put talkback in a radio - could we be looking at a possible short in the audio section?

Yes, Jim & Tim, fantastic post.

Fantastic that someone who could easily have legal access to thousands of MHz
in spectrum is only interested in operating within 26-28.

Fantastic that he bases his opinion of the entire HF spectrum on what he's
heard on one 20 meter frequency.

Fantastically close-minded.

<< fantastic post jim

You make a point. No, I don't judge on one or two isolated incidents. Perhaps I should have touched on the one incident which still bothers me. I was operating out of KG6NAC (Guam Island) and found a nice open space. I called to check if the frequency was clear. No answer so I called CQ for a stateside patch. Imagine my surprise when a KH6 (Hawaii) came back and told me a very important DX contest was on - take my phone patch traffic elsewhere! There was one little problem. KG6NAC was the US Naval Hospital on Guam. In attendance for this wonderful show of amateur radio were a couple of nurses, one doctor, and one patient recovering from wounds. This was in 1968 - remember Vietnam? I admit I was a bit upset - and I called the guy and asked him to give me a landline so I could tell him what I thought of him - and why - so I wouldn't jeapordize my license by telling him over the air. I won't bother you with other incidents (good old Mike, W2OY), but I let my tickets expire around 1980 (1st phone, telegraph, extra). I decided to get back into the radio game in 1993 and gundecked the tests. I did not study (I don't have to, I understand the subject material and have little use for Q&A manuals - plus, although a bit rusty at cw having not copied for over 20 years, had copied 40 WPM solid typewritten copy in the Navy - so 20 was not too bad). It is based upon many different incidents that I honestly believe that the amateur community has a bit of cleaning up to do. I have good friends on 440 and enjoy it. As for HF, I really have to get cracking on some digital modes. I've often thought about a variable length code - and along comes PSK-31. Really neat, a kind of non-return-to-zero encoding.

But to get back to the point, I have heard more than just a few lids, mostly high power I-own-the-airwave type mentality and I prefer not to bother with them. I just wish I had more property since I would be back on 160 in a heartbeat, but after having that 8 ga several hundred foot longwire as a teenager, I think I would be disappointed in anything I could erect here.

One question for you though. Even if you didn't experience other problems, what would your attitude be towards that Hawiian station had you been in my shoes? Oh, one other question before you answer that one: ever been in a war?

Thanks for letting me respond
Jim
ps - there are good and bad ops both CB and amateur - but while I was active in the bunny hunts on CB we never had anyone intentionally jam us. I can't say the same for 80, 20, or 15. I did not have a problem on 160 or 40 (cw on 40) though.

Good Points as well Bob, What does and usually happens is the squeaky wheel gets the grease. A neighbor complains loud and long enough the cops come over and all they know is if they stop you from transmitting, thats right pull the plug on your ass, they don't have to hear from your neighbor any longer, the mayor doesnt have to hear it, the town council doesnt have to hear it, and so on
The voters "neighbors "are happy 2 or 3 people complaining are more votes than 1 of you transmitting, trust me I have been there before I have also been to my states Superior court re: prb-1 antenna restrictions

Hmm ... and after I said I never ran into any bad CB ops on the air. Well, this is the internet so I guess I can stick by my previous post - but this is one guy I'd just as soon not talk with on the radio. It is precisely because of individuals such as this (both amateur and CB), who are obviously brain-challenged, that we have this rift between CB and amateurs. Get over it guys, both sides have decent folks and some who are a bit brain-challenged.

Thanks for letting me vent

I honestly don't think they'd auction off 11 meters - or, for that part, most of HF. HF is simply not all that useful anymore. Sure, we get kicks out of working 'skip', but, as you know, skip is not reliable. The various digital modes are nice, but not super fast due to phase-shifting in the atmosphere. No, the designs are mostly on the UHF frequencies (300 MHz - 3 GHz) and even above (satellite use as well as ground links).

Hey genius, hams are not the ones responsible for the new CB law for
starters. You can thank your fellow CBers for that mess. You know, the
illegal CBers. As for invading the ham bands, hams are REAL good at
tracking down offenders and turning them in. So they'll keep the FCC
real busy going after anyone that wants to be a wise ass. Big
problems? Nope! Easy one's that will be quickly delt with and you can
bank on it.

Keep dreaming....

Oh brother. Now we gotta go down a "have you ever been in the war" sidetrack? I might ask the same of you - have you ever given birth, or marched in a civil rights protest, or had your leg amputated at the knee, or tasted fresh baked bread? And what's ANY of that got to do with the issue at hand?

James, although I agree the behavior of the aformentioned ham was very liddish, you cannot compare a DX contester asking you to QSY (or someone refusing to run your phone patch traffic) to the EXTRAORDINARY rudeness, childishness and profanity that happens on CB every day.

It's a good bet that many of the people claiming that the ham bands are too boring or snooty or too whatever have not really been on them much. There is so much spectrum and so many types of ops that you'd be hard pressed to find no one you can fit in with.

If you want tech nerds talking about specs and tweaks, we got them. If you want yahoo rednecks swearin' and cussin' and fightin, we got them. If you want elitists who dot every "i", we got them. If you want regular folks who just want to make contacts, we got them too.

No reason to get stuck on any one frequency and say "well, THAT'S what hams are all about". It just ain't true.

<< You make a point. No, I don't judge on one or two isolated incidents. Perhaps I should have touched on the one incident which still bothers me. I was operating out of KG6NAC (Guam Island) and found a nice open space. I called to check if the frequency was clear. No answer so I called CQ for a stateside patch. Imagine my surprise when a KH6 (Hawaii) came back and told me a very important DX contest was on - take my phone patch traffic elsewhere! There was one little problem. KG6NAC was the US Naval Hospital on Guam. In attendance for this wonderful show of amateur radio were a couple of nurses, one doctor, and one patient recovering from wounds. This was in 1968 - remember Vietnam? I admit I was a bit upset - and I called the guy and asked him to give me a landline so I could tell him what I thought of him - and why - so I wouldn't jeapordize my license by telling him over the air. I won't bother you with other incidents (good old Mike, W2OY), but I let my tickets expire around 1980 (1st phone, telegraph, extra). I decided to get back into the radio game in 1993 and gundecked the tests. I did not study (I don't have to, I understand the subject material and have little use for Q&A manuals - plus, although a bit rusty at cw having not copied for over 20 years, had copied 40 WPM solid typewritten copy in the Navy - so 20 was not too bad). It is based upon many different incidents that I honestly believe that the amateur community has a bit of cleaning up to do. I have good friends on 440 and enjoy it. As for HF, I really have to get cracking on some digital modes. I've often thought about a variable length code - and along comes PSK-31. Really neat, a kind of

non-return-to-zero encoding.

But to get back to the point, I have heard more than just a few lids, mostly high power I-own-the-airwave type mentality and I prefer not to bother with them. I just wish I had more property since I would be back on 160 in a heartbeat, but after having that 8 ga several hundred foot longwire as a teenager, I think I would be disappointed in anything I could erect here.

One question for you though. Even if you didn't experience other problems, what would your attitude be towards that Hawiian station had you been in my shoes? Oh, one other question before you answer that one: ever been in a war?

Thanks for letting me respond
Jim
ps - there are good and bad ops both CB and amateur - but while I was active in the bunny hunts on CB we never had anyone intentionally jam us. I can't say the same for 80, 20, or 15. I did not have a problem on 160 or 40 (cw on 40) though.

They make RC cars and controllers. Check out:
http://www.tamiya.com/america/ta.htm
BTW, they ain't cheap. My buddy used to race them. He always blew
out "dogbones", a kind of u-joint used to connect the diff to the
wheels.

FRS Rule 4 - FRS units.

You may only use an FCC certified FRS unit. (You can identify an FCC certified
FRS unit by the label placed on it by the manufacturer.)

You must not make, or have made, any internal modification to an FRS unit. Any
internal modification cancels the FCC certification and voids your authority to
operate the unit in the FRS.

You may not attach any antenna, power amplifier, or other apparatus to an FRS
unit that has not been FCC certified as part of that FRS unit. There are no
exceptions to this rule and attaching any such apparatus to a FRS unit cancels
the FCC certification and voids everyone's authority to operate the unit in the
FRS.

For complete information, see the Commission's Rules for the Family Radio
Service, 47 C.F.R. 95.191-95.194. Further assistance contact the Consumer
Assistance Branch, Federal Communications Commission, 1270 Fairfield Rd.,
Gettysburg, PA 17325-7245, or you may call 717-337-1212, 8:00 a.m. - 4:30 p.m. E.S.T.

FIGURE 1A: Frequencies Available to the FRS

Channel No. Frequency (MHz)
1 462.5625
2 462.5875
3 462.6125
4 462.6375
5 462.6625
6 462.6875
7 462.7125
8 467.5625
9 467.5875
10 467.6125
11 467.6375
12 467.6625

13 467.6875
14 467.7125

<<Maximum allowable frequency deviation ï¿½ 2.5 kHz)>>
<<Maximum allowable output .5 watts ERP>>

Why don't you go back to the ham group you crawled out of? Don't you think CB'ers are aware of the rules? I responded to a request for information, and you started bouncing off the walls. We have about 10 hamcops here now, we don't need your shit too. Good day.

"Harmon Rabb Jr." wrote: Shit we read when we first heard about FRS radios. What's next? posting the full text of MURS? We have seen and read that too. Be original for once. Are you a sheople?

You probably live in Florida and only dimpled your ballot...
